

# New Street Trees

Urban Forest Infill  
Street Tree Planting Program 2025

As part of the Urban Forest Plan the City of Perth will be planting new street trees across the city between April and October 2025 with the aim of:

- Filling gaps within existing street tree planting
- Helping to cool streets
- Improving green links
- Beautifying neighbourhood streets
- Promoting community health and well-being

## Which tree species will be planted?

Street tree species are determined by the City of Perth Street Tree Guide 2023. Information on which tree has been selected for planting within a particular street as part of the current tree planting program can be found at [perth.wa.gov.au/urbangreening](https://perth.wa.gov.au/urbangreening)

## When will planting take place?

To maximise successful tree establishment and growth new trees are planted during the cooler months (April to October).

In some instances, site investigation works may take place prior to tree planting to locate underground services and test soils.

## What to expect?

This work is generally low impact and the City aims to minimise disruption to adjoining residents and businesses during planting of new street trees. Some trees require extra soil volumes which may take longer to install.

## Polyphagous shot-hole borer (PSHB)

Polyphagous shot-hole borer is a wood-boring beetle native to Southeast Asia that excavates tunnels in stressed and healthy trees.

PSHB attacks a wide range of trees and woody shrubs across urban, agricultural and natural landscapes by boring into the wood and cultivating a fungus as a food source. If left unchecked, many thousands of trees could be lost to PSHB.

For more information visit Department of Primary Industries and Regional Development (DPIRD) website. Residents who suspect they may have borer damage to trees should make a report to:

## How can I help?

The City of Perth is responsible for all trees planted within city streets. To maximise success each tree is given additional care and management for the first five years after planting.

The role of the community is important. You can assist the City by letting us know if trees are struggling or have been damaged, and by carrying out additional watering during the summer months. Please apply water directly to the base of the tree to give it the best chance of survival.

## Tree Cities of the World

The City has recently been recognised as a Tree City of the World for the second consecutive year. The programme provides direction, assistance, and worldwide recognition for your community's dedication to its urban forest. For more information visit: <https://treecitiesoftheworld.org/>
