Until the 1880s the Perth town centre was characterised by the establishment of small cottages, shops and small businesses and was rural in character. The expansion of commerce following the discovery of gold in the 1890s put pressure on land in the centre of Perth with the result that most residential uses were displaced in favour of commercial development. The area around King Street was characterised by workers' cottages with shops, coal yards, smithies and foundries located in the adjacent areas of Murray and Hay Street. In the mid 1890s some smaller businesses began to establish themselves in existing cottages and a number of larger enterprises erected substantial new offices and warehouses in the area. Perth underwent a vigorous public works and corresponding expansion of commerce and trade, and by c. 1910 the centre of Perth was substantially rebuilt. Hay Street remained a major commercial street throughout the twentieth century and for most of that time was characterised by traffic, including trams.
Post Office directories show that there were three double storey terraces originally 697-699-701. The terraces were built in 1897. The post office directory lists the occupant and the names of each house in 1898 as: Joseph Harris (Hinton) in No. 697, Michael G. Anderson (Jesmond) in No. 699, and Miss Julia Flynn (Jilba) in No. 701. Numbering changed in 1908 to 993-997.The Metropolitan Water Supply Survey plan (1939) shows three brick

houses with full length front verandahs, and roughly in a L-shape so that there was a mini verandah half way down the length of the house inside the L, and another verandah at the rear.
Aerial photos show that between 1953 and 1965, additions were made to the rear of the eastern two terraces, with the back yard of No. 997 left paved for carparking. The firewalls dividing the three terraces are visible in aerial photos. Viewed from the rear lane, this addition comprises of a large-hipped roof brick and iron warehouse with a roller door at the eastern end, and several multi-paned steel framed windows along the eastern elevation. A shop front was added to the terraces between 1985 and 1995.In 2012-13 a demolition of buildings adjacent and all the way west to Elder Street also included demolition of No. 997, leaving only two. The shopfront was refurbished or re-roofed at this time, so that the building is difficult to read as former terraced houses. When viewed from the eastern side right-of-way, the original two storey former residences are evident, with sash windows and evidence of upper floor verandahs. An internal assessment is required to determine what original fabric remains. Aerial photos show early original short sheet corrugated iron clad roofs. At 2022 the place is a ceramic tile gallery. The upper floor is not readable as former terraces, which have lost their verandah detailing.

WESTERN AUSTRALIAN HISTORIC THEME

4. Building Perth (Settlements & Cities) - 4.6 Remembering significant phases in the development of Perth

STATEMENT OF SIGNIFICANCE

The place has historical significance as one of a very few remaining terraces at the western end of the city dating from the period before the commercial area of the city extended to this part of Hay Street.
The change of use to commercial/professional offices, and the loss of one of the three terraces, is representative of the changing character and growth of the City.
The former terraces have little aesthetic value due to heavy modifications.

NATURE OF SIGNIFICANCE

HERCON Value A - Its importance in demonstrating the evolution or pattern of Perth's history

HISTORY

Until the 1880s the Perth town centre was characterised by the establishment of small cottages, shops and small businesses and was rural in character. The expansion of commerce following the discovery of gold in the 1890s put pressure on land in the centre of Perth with the result that most residential uses were displaced in favour of commercial development. The area around King Street was characterised by workers' cottages with shops, coal yards, smithies and foundries located in the adjacent areas of Murray and Hay Street. In the mid 1890s some smaller businesses began to establish themselves in existing cottages and a number of larger enterprises erected substantial new offices and warehouses in the area. Perth underwent a vigorous public works and corresponding expansion of commerce and trade, and by c. 1910 the centre of Perth was substantially rebuilt. Hay Street remained a major commercial street throughout the twentieth century and for most of that time was characterised by traffic, including trams.
Post Office directories show that this area was residential up until the 1920s. In that decade, many houses were either replaced with commercial buildings, adapted for that use, or became lodging houses, a reflection of the growth of the city. In 1925, the house at 1000 Hay Street was being used as a lodging house, run by Mrs A. M. Kelly. By 1929, a commercial building had replaced it, occupied by L. E. Sauzier, car importer, and Auburn Cars Ltd.
The Metropolitan Water Supply Survey plan (1939) shows a simple rectangular planned building with a right of way on the east side. There is another warehouse at the rear of the lot, approximately the same size. Aerials show that both buildings remain and have not changed in size since 1948. In 1949 the building was occupied by

Mellon, printers, and Car Wreckers Ltd. State Library of WA photos dated 1959 show the building was then occupied by A. G. Healing Ltd and was an electrical goods showroom. (113910PD; 113989PD). The shop front had double glazed doorways at each side of three fixed glass panes that extended almost to ground level. Above the doors and windows were a row of obscure glass paned top lights. The pediment was simple with a curved central pediment that featured '1000' and 'W.G. Healing Ltd' as a painted sign. In 1982 the place was 'Design House' (311619PD). By this time the original shopfront has been modified with the loss of the entry doors at each end. The top lights appear to have been painted. From the street the side of the building is visible, indicating it was originally a face brick warehouse. Steel framed multi-paned windows are evident on the side elevation.
At 2022 the front building is a furniture showroom.

WESTERN AUSTRALIAN HISTORIC THEME

HISTORY

Until the 1880s the Perth town centre was characterised by the establishment of small cottages, shops and small businesses and was rural in character. The expansion of commerce following the discovery of gold in the 1890s put pressure on land in the centre of Perth with the result that most residential uses were displaced in favour of commercial development. In the mid 1890s some smaller businesses began to establish themselves in existing cottages and a number of larger enterprises erected substantial new offices and warehouses. Hay Street remained a major commercial street throughout the twentieth century and for most of that time was characterised by traffic, including trams.
West Perth developed as suburban residential area in the late 1890s. From its inception it had the characteristics of a quality neighbourhood. The West Perth end of Hay Street was predominately prestigious homes, taking advantage of Hay Street's proximity to the city and King's Park (then known as Perth Park). The elevated location provided healthy site drainage as well as cooling breezes and views over the city and hills. The area had social status already associated with addresses in nearby Mount Street and access to the city's piped water system.
The homes built in West Perth from the early 1900s included prestigious mansions built in prominent locations and smaller working class cottages in the narrower back streets and towards the northern end of the area adjacent to the railway.
Aerial photos from 1948 indicate that this lot originally contained a Federation Queen Anne style house. Post Office directories show that the house was built by 1897 and was originally No. 746. Numbering changed in

1908. It was first occupied by Col. Alex Wilson and the house was named 'Blairskin.' By 1955 the house had been modified with a shopfront and an extension at the rear and was being used as a warehouse. A photo held at the State Library of WA dated 1955 shows it was A. J. Wyle, electrical store. A new development was built for Forbes and Fitzhardinge, a well-known architecture firm, in 1982. It is in a prominent location on the border of West Perth and the CBD directly facing Parliament House gardens. The building was designed mainly by Lance Jones and completed in March 1983. It has open trusses all the way through the top storey, and a bagged white brickwork stair tower. The south is all glazed, which gives abundant natural studio light, and a view of Parliament House. There is a central clerestory which also provides light. The interior is essentially open plan, with a basement bar that opens onto a courtyard area. The building won a Royal Australian Institute of Architects Commendation in 1985. A real estate advertisement dated June 2021 shows some of the features of the two storey building, which also provides for on-site parking.

STATEMENT OF SIGNIFICANCE

The place has aesthetic significance as a contemporary commercial office building in Perth from the 1980s. It has historic significance representing the commercial expansion of Perth, and for its associations with architectural firm Forbes and Fitzhardinge, for whom it was built. The building won a Royal Australian Institute of Architects Commendation in 1985.

NATURE OF SIGNIFICANCE

HERCON Value A - Its importance in demonstrating the evolution or pattern of Perth's history

It has historic significance representing the commercial expansion of Perth,

HERCON Value B - Its importance in demonstrating rare, uncommon or endangered aspects of Perth's heritage

HERCON Value C - Its potential to yield information that will contribute to an understanding of Perth's history

HERCON Value D - Its importance in demonstrating the characteristics of a broader class of places

HERCON Value E - Any strong or special meaning it may have for any group or community because of social, cultural or spiritual associations

HERCON Value F - Its importance in exhibiting particular aesthetic characteristics valued by any group or community

The place has aesthetic significance as a contemporary commercial office building in Perth from the 1980s.

HERCON Value G - Any special association it may have with the life or work of a person, group or organization of importance in Perth's history

The place has significance for its associations with architectural firm Forbes and Fitzhardinge, for whom it was built.

HERCON Value H - Its importance in demonstrating a high degree of creative or technical achievement

The building won a Royal Australian Institute of Architects Commendation in 1985.

HERCON Value I - Any HERCON Value I - Any other characteristic it may have that in the opinion of the decision making body is relevant

CONDITION AND AUTHENTICITY

Condition	Good
Building Fabric Authenticity	High.

CLASSIFICATION OF SIGNIFICANCE

HISTORY

West Perth developed as suburban residential area in the late 1890s. From its inception it had the characteristics of a quality neighbourhood. The West Perth end of Hay Street was predominately prestigious homes, taking advantage of Hay Street's proximity to the city and King's Park (then known as Perth Park). The elevated location provided healthy site drainage as well as cooling breezes and views over the city and hills. The area had social status already associated with addresses in nearby Mount Street and access to the city's piped water system. The homes built in West Perth from the early 1900s included prestigious mansions built in prominent locations and smaller working class cottages in the narrower back streets and towards the northern end of the area adjacent to the railway. In the 1920s and 1930s, many property owners in West Perth were taking advantage of the location and demand for housing by renting out rooms. If this was the case, private homes would be listed as lodging house, boarding house, flats or apartments. Sometimes large houses would actually be converted into flats or apartments.
The building was originally a semi-detached pair. Post Office directories show that it was built by 1898 and was originally No. 748-750. Numbering changed to 1068-1070 in 1908. The first occupants were Lol Cantor (748) and Robert Mansfield (750). By 1920, although still two separate houses, both were being run as boarding houses; common of larger houses in this area, in which proprietors would take advantage of the size and location. In 1930 No. 1070 was apartments. The entry in the last published post office directory (1949) lists the

place as one property, and it was apartments operated by Mrs O. A. Pettersson. Two 1950s photographs in the State Library of WA show the place is 'Calleva Flats'. It has two pyramidal roofs over projecting bays, Filigree iron frieze and balustrade to the front and the central section of the verandah has been infilled in timber and sliding windows. There is concrete stairs at each end of the verandah, and a low brick wall to the street boundary, with link mesh gates at each end. From the street the building is single storey, but the topography allows for a second storey from the rear.
Aerial photos show that between 1985 and 1995 the building was reroofed from red, short sheet corrugated iron to steel, and the back yards cleared for use as carparking. In 2000, a carport was erected at the rear on the east side of the lot. An online advertisement dated October 2021 shows the interior, and states there are 16 separate rooms spread out over two levels, suitable for offices or medical/consulting. There are four large rooms with views to Hay Street, and high ceilings with ornate cornices and detail. The cast iron balustrade at the front is different to that in the 1950s photographs. At 2022, the building is still two separate lots but under one ownership.

WESTERN AUSTRALIAN HISTORIC THEME

8. Developing Perth (Australia's) Cultural Life - 8.10.4 Designing & building fine buildings
8. Developing Perth (Australia's) Cultural Life - 8.12 Living in cities & suburbs

STATEMENT OF SIGNIFICANCE

The place has aesthetic significance as an example of a Federation Queen Anne residential building dating from around the turn of the century.
Its change of use from two attached residences into boarding houses, then flats, and then one property for apartments demonstrates the demand for accommodation close to the city from the 1920s.
The building is a representative example of a residential property in West Perth that has undergone a change of use to commercial/professional offices with the changing character and growth of the City.
It is a rare surviving pair of houses on Hay Street that has become increasingly commercial since WWII.

HISTORY

West Perth developed as suburban residential area in the late 1890s. From its inception it had the characteristics of a quality neighbourhood. The West Perth end of Hay Street was predominately prestigious homes, taking advantage of Hay Street's proximity to the city and King's Park (then known as Perth Park). The elevated location provided healthy site drainage as well as cooling breezes and views over the city and hills. The area had social status already associated with addresses in nearby Mount Street and access to the city's piped water system. The homes built in West Perth from the early 1900s included prestigious mansions built in prominent locations and smaller working class cottages in the narrower back streets and towards the northern end of the area adjacent to the railway. In the 1920s and 1930s, many property owners in West Perth were taking advantage of the location and demand for housing by renting out rooms. If this was the case, private homes would be listed as lodging house, boarding house, flats or apartments. Sometimes large houses would actually be converted into flats or apartments.
The building was originally a semi-detached pair. Post Office directories show that it was built by 1897 and was originally No. 752-754. Numbering changed in 1908 to 1072-1074. The first occupants were Anslem Helmich (752) and Mrs Thomas Smith (754). By 1920, although still two separate houses, No. 1074 was being run as a lodging house; common of larger houses in this area, in which proprietors would take advantage of the size and location. By 1930 both places are being run as apartments. The entry in the last published post office directory (1949) lists both houses as apartments.

The Metropolitan Water Supply Survey plan (1953) shows two attached houses. The entrance to 1072 was further back around the return of the verandah. The window at No. 1074 was originally a faceted bay, with a faceted verandah around it. Aerial photos show that by 1970 the rear yard has been cleared and used for carparking.
From the street it is clear the place has lost much of its original detail, including the front verandah, which is now a flat concrete awning supporting by steel poles. The window bays are covered in roller shutters. A street view from 2014 shows that the windows are one fixed pane, with triple top lights, suggesting there used to be triple casement windows. The projecting bay window is no longer faceted, and has a flat, concrete awning similar to the replacement verandah roof. There is no gable detail, except for a louvred vent. The front yard is concrete pavers.
A real estate advertisement in 2010 describes the place as a character residence of 483.6sqm providing 306sqm of offices and 177.6sqm of basement storage space. From the street the house appears single storey, but the sloping topography allows for a basement space at the rear. At 2022 the place is used for offices of a charity organisation, 'Save the Children.'
The building is still two separate lots but under one ownership, and the street address is No. 1074.

WESTERN AUSTRALIAN HISTORIC THEME

1. Demographic settlement and mobility - 104 Land allocation and subdivision
3. Occupations - 306 Domestic activities
3. Occupations - 308 Commercial services and industries
5. Outside influences - 504 Depression and boom

AUSTRALIAN HISTORIC THEME

3. Developing Perth's (Local, Regional & National) Economies - 3.22 Lodging people
4.Building Perth (Settlements & Cities) - 4.1.3 Learning to live with property booms & busts
7. Governing - 7.6.6 Providing services & welfare
4.Building Perth (Settlements & Cities) - 4.3 Developing institutions
4.Building Perth (Settlements & Cities) - 4.6 Remembering significant phases in the development of Perth

STATEMENT OF SIGNIFICANCE

The place is an example of a residential building dating from around the turn of the century.
Its change of use from two attached residences into lodging houses, then apartments demonstrates the demand for accommodation close to the city from the 1920s.
The building is a representative example of a residential property in West Perth that has undergone a change of use to commercial/professional offices with the changing character and growth of the City.
It has little aesthetic significance due to being considerably altered, but its scale contributes to the Hay Street historical streetscape.

NATURE OF SIGNIFICANCE

HERCON Value A - Its importance in demonstrating the evolution or pattern of Perth's history

The place is an example of a residential building dating from around the turn of the century.

HERCON Value B - Its importance in demonstrating rare, uncommon or endangered aspects of Perth's heritage

HERCON Value C - Its potential to yield information that will contribute to an understanding of Perth's history

Its change of use from two attached residences into lodging houses, then apartments demonstrates the demand for accommodation close to the city from the 1920s.

HERCON Value D - Its importance in demonstrating the characteristics of a broader class of places

The building is a representative example of a residential property in West Perth that has undergone a change of use to commercial/professional offices with the changing character and growth of the City.

HERCON Value E - Any strong or special meaning it may have for any group or community because of social, cultural or spiritual associations

HERCON Value F - Its importance in exhibiting particular aesthetic characteristics valued by any group or community

It has little aesthetic significance due to being considerably altered, but its scale contributes to the Hay Street historical streetscape.

HISTORY

West Perth developed as suburban residential area in the late 1890s. From its inception it had the characteristics of a quality neighbourhood. The West Perth end of Hay Street was predominately prestigious homes, taking advantage of Hay Street's proximity to the city and King's Park (then known as Perth Park). The elevated location provided healthy site drainage as well as cooling breezes and views over the city and hills. The area had social status already associated with addresses in nearby Mount Street and access to the city's piped water system. The homes built in West Perth from the early 1900s included prestigious mansions built in prominent locations and smaller working-class cottages in the narrower back streets and towards the northern end of the area adjacent to the railway. In the 1920s and 1930s, many property owners in West Perth were taking advantage of the location and demand for housing by renting out rooms. If this was the case, private homes would be listed as lodging house, boarding house, flats or apartments. Sometimes large houses would actually be converted into flats or apartments.
The 1930 Post Office directory lists "New Flats" named Central Flats, which by 1931 have ten individual occupants. An advertisement in the West Australian (9 July 1930) states that "These desirable flats each containing three rooms, kitchen and bathroom, are To Let, furnished and unfurnished at Moderate Rates." A photograph dated 1930 held at the State Library (101063PD) shows that the central gable originally featured a moulded stucco date label reading '1930' and the front boundary wall was of the same red brick as the flats.

Both are now lost, however aside from these details, the appearance of the building when viewed from Hay Street is remarkably intact.
The Metropolitan Water Supply Survey plan (1953) shows the flats with central front steps and a path to Hay Street, three small, porch-size verandahs on the east side, rear external stairs, and brick garages along the rear and west side boundary. Aerial photos show that little has changed on the lot.
At 2022 the building is intact and a landmark in the location, with modern buildings either side. The two storied apartment building has a slightly projecting central bay and a recessed entry with a stucco label mould over bearing the name of the building 'The Charleston.' The tiled hipped roof has a gable to the street façade with terracotta apex finials. The corners are quoined with inset decorative brick work and the windows have a brick architrave emphasis, and stucco headers. The multi-pane sash windows of vertical proportions punctuate the front elevation.

HISTORY

West Perth developed as suburban residential area in the late 1890s. From its inception it had the characteristics of a quality neighbourhood. The West Perth end of Hay Street was predominately prestigious homes, taking advantage of Hay Street's proximity to the city and King's Park (then known as Perth Park). The elevated location provided healthy site drainage as well as cooling breezes and views over the city and hills. The area had social status already associated with addresses in nearby Mount Street and access to the city's piped water system. The homes built in West Perth from the early 1900s included prestigious mansions built in prominent locations and smaller working class cottages in the narrower back streets and towards the northern end of the area adjacent to the railway. In the 1920s and 1930s, many property owners in West Perth were taking advantage of the location and demand for housing by renting out rooms. If this was the case, private homes would be listed as lodging house, boarding house, flats or apartments. Sometimes large houses would actually be converted into flats or apartments.
The Post Office Directory first lists No. 1121 Hay Street in 1898, as No. 783. Numbering changed in 1908. The occupant listed was Mrs Jane Green, and the house was named 'Westcliffe'.
Mrs Jane Beacham (1818-1910) had arrived in the Swan River Colony in 1829 on the 'Lotus' at aged 11. Her father William Beacham was one of Col. Latour's party. Jane's mother, Mary, died the year after the family arrived, and two years later her brother Reuben, was killed by Aboriginal people at Greenmount, aged 12. Jane

married George Green in 1836 at age 18. George was a bricklayer ten years her senior, who had arrived in the colony in 1830 on the 'Tranby'. George and Jane Green had eleven children.
George Green built on Perth Town Lots G1 and G2 in the 1830s and 1840s. He established a foundry at 246 Wellington Street which he later passed on to his son Levi (who built the Baird's Building on this site in 1906). George Green built a new steam mill in William Street in 1863, and later moved into shipping. He owned two ships 'Evergreen; and 'Les trois Amis', plus and 4 schooners, and in 1857 and 1865 employed Ticket-of-Leave men in his marine business. George Green died in 1874, leaving behind considerable wealth. His widow Jane Green survived him for another 36 years. She died in her house at 1121 Hay Street in 1910.
In 1927 the occupant was Mrs S. Allen, but by 1930, like much of West Perth, the large house was converted into apartments in response to the demand for accommodation close to the city. The Metropolitan Water Supply Survey plan (1953) shows a brick house with a bay window on the west side and a full length front verandah, with central steps and a path to the street.
A photo held at the State Library of WA dated 1982 shows that the place had lost its verandah roof and balconies. Aerial photos show that the house was reroofed from short sheet corrugated iron to corrugated steel in 2007/08.
A real estate advertisement online dated 2021 shows the interior, and while there have been some new penetrations in walls, there are many original features such as the timber windows and doors, moulded arches, timber staircase, high ceilings, skirtings and cornices.
At 2022, from the street the building is readable as a grand, two storey house. It has a hipped roof with moulded brackets under the eaves, and a pyramidal roof over the projecting faceted bay at the western end. The ground floor windows are double hung sash windows with rendered moulding and bands. The upper floor windows have no decoration. The building is set up from ground level at the front due to the natural topography of the lot, and the verandah floor has a wrought iron balustrade (not original). The former house is fitted out for offices.

STATEMENT OF SIGNIFICANCE

The place has aesthetic and historic significance as an example of a substantial residence built in the street adjacent to Parliament House in 1910.
It is an example of a mansion on the outskirts of Perth representing the development of West Perth as a prestigious residential address at the period.
The place is a representative example of the changing character and growth of the city, being a former residence that has undergone a change of use to commercial/professional offices.
The place has historical significance for its associations with the Green family, colonial settlers who built up considerable personal wealth in the early years of Perth.

HISTORY

Demolished 2006. The Street between Harvest Terrace and Havelock Streets in West Perth was originally called Wilson Street. The name changed between 1929 and 1930 to become Parliament Place. No. 32 Parliament Place was built in 1918. It was a substantial two storey residence. It was demolished in 2006. The lot then joined with one facing Hay Street to become Lot 80 DP 52983. The house facing Hay Street (No. 1121) is still extant. (See separate place record for 1121 Hay Street).

HISTORY

West Perth developed as suburban residential area in the late 1890s. From its inception it had the characteristics of a quality neighbourhood. The West Perth end of Hay Street was predominately prestigious homes, taking advantage of Hay Street's proximity to the city and King's Park (then known as Perth Park). The elevated location provided healthy site drainage as well as cooling breezes and views over the city and hills. The area had social status already associated with addresses in nearby Mount Street and access to the city's piped water system. The homes built in West Perth from the early 1900s included prestigious mansions built in prominent locations and smaller working class cottages in the narrower back streets and towards the northern end of the area adjacent to the railway. In the 1920s and 1930s, many property owners in West Perth were taking advantage of the location and demand for housing by renting out rooms. If this was the case, private homes would be listed as lodging house, boarding house, flats or apartments. Sometimes large houses would actually be converted into flats or apartments.
The Post Office Directory first lists No. 1123 Hay Street as "New house" in 1925. The following year the place is listed as apartments, operated by Mrs Kath A. Reid. At this time many property owners in West Perth were taking advantage of the location and demand for housing by renting out rooms. If this was the case, private homes would be listed as lodging house, boarding house, flats or apartments.
The Metropolitan Water Supply Survey plan (1953) shows the house in this location, with a footprint that remains the same at 2022, aside from a large covered area to the back of the house, in corrugated iron. The

rest of the roof is tiled. This covered area was added in the early 1960s. At this time, the rear yard was cleared and used for carparking, indicating a change of use. The original verandah at the east side has been enclosed. A 1982 photo held at the State Library of WA (311611PD) provides a good view of the house at the time. It is a Federation Arts and Craft style with a simple hipped roof, with the gable to the side. It is set up from ground level on noticeable limestone foundations, and the façade is face brick to windowsill height and roughcast render above. A plaque added to the front of the house indicates it was office use.

HERCON Value F - Its importance in exhibiting particular aesthetic characteristics valued by any group or community

The place has aesthetic significance as a rare example of a later (1925) Federation residence built in West Perth.
The place remains intact and makes a positive contribution to the West Perth Hay Street streetscape, which contains buildings from the 1890s through to the 21st century.

HERCON Value G - Any special association it may have with the life or work of a person, group or organization of importance in Perth's history

HERCON Value H - Its importance in demonstrating a high degree of creative or technical achievement

HERCON Value I - Any HERCON Value I - Any other characteristic it may have that in the opinion of the decision making body is relevant

CONDITION AND AUTHENTICITY

Condition	Fair
Building Fabric Authenticity	High. Original form with some loss of detail.

CLASSIFICATION OF SIGNIFICANCE

Considerable – Category 2 - Very important to the heritage of the locality.

Architectural Style 1 Specific	Queen Anne
Architectural Style 2 General	
Architectural Style 2 Specific	
Archaeology	
Physical Description	

Painted brick and iron formerly residential building which is single storey at the front but has a two-storey undercroft section to the rear. Hipped roof with a bullnosed verandah to the front which has lost original detail. The front of the house features a facetted bay with a prominent half-timbered gable with pebble dash finish and eaves brackets. The front door is not original and replaces a former window. Windows are full height double hung sashes.
Interior contains considerable original fabric. Floor plan is generally intact. One original room has been converted to toilets. Generally original ceilings, ceiling roses, architraves, doors, skirtings etc. Rear stair is original.
Not part of an intact streetscape.

HISTORY

West Perth developed as suburban residential area in the late 1890s. From its inception it had the characteristics of a quality neighbourhood. The West Perth end of Hay Street was predominately prestigious homes, taking advantage of Hay Street's proximity to the city and King's Park (then known as Perth Park). The elevated location provided healthy site drainage as well as cooling breezes and views over the city and hills. The area had social status already associated with addresses in nearby Mount Street and access to the city's piped water system. The homes built in West Perth from the early 1900s included prestigious mansions built in prominent locations and smaller working class cottages in the narrower back streets and towards the northern end of the area adjacent to the railway. In the 1920s and 1930s, many property owners in West Perth were taking advantage of the location and demand for housing by renting out rooms. If this was the case, private homes would be listed as lodging house, boarding house, flats or apartments. Sometimes large houses would actually be converted into flats or apartments.

The Post Office Directory first lists No. 1130 Hay Street in 1910, occupied by Mrs Catherine Mansfield. (It may have been built earlier but numbering in the street changed and it is difficult to trace. Rate books would confirm). Mrs Mansfield was still in the house in 1920. Like much of West Perth, the large house was later converted into apartments, in response to the demand for accommodation close to the city. It was operated by Mrs W. H. Beaver in 1930, and Thomas Murray in 1949. The Metropolitan Water Supply Survey plan (1953) shows a large house with a projecting faceted bay and a return verandah. There is a basement at the rear, and also a verandah along the rear of the house. Aerial imagery indicates the house remains unchanged in size, and from the street it retains its original fabric and appearance. At 2022 the house is used for the head office of a charitable organisation, Legacy.

WESTERN AUSTRALIAN HISTORIC THEME

STATEMENT OF SIGNIFICANCE

The place is an example of a Federation Queen Anne residence dating from around the turn of the century.
Its change of use into apartments demonstrates the demand for accommodation close to the city from the 1920s.
The building is a representative example of a residential property in West Perth that has undergone a change of use to commercial/professional offices with the changing character and growth of the City.
The place is significant for its contribution to the streetscape.

NATURE OF SIGNIFICANCE

HERCON Value A - Its importance in demonstrating the evolution or pattern of Perth's history

Its change of use into apartments demonstrates the demand for accommodation close to the city from the 1920s.

HERCON Value B - Its importance in demonstrating rare, uncommon or endangered aspects of Perth's heritage

HERCON Value C - Its potential to yield information that will contribute to an understanding of Perth's history

HERCON Value D - Its importance in demonstrating the characteristics of a broader class of places

The building is a representative example of a residential property in West Perth that has undergone a change of use to commercial/professional offices with the changing character and growth of the City.

HERCON Value E - Any strong or special meaning it may have for any group or community because of social, cultural or spiritual associations

HERCON Value F - Its importance in exhibiting particular aesthetic characteristics valued by any group or community

The place is an example of a Federation Queen Anne residence dating from around the turn of the century. The place is significant for its contribution to the streetscape.

HISTORY

West Perth developed as suburban residential area in the late 1890s. From its inception it had the characteristics of a quality neighbourhood. The West Perth end of Hay Street was predominately prestigious homes, taking advantage of Hay Street's proximity to the city and King's Park (then known as Perth Park). The elevated location provided healthy site drainage as well as cooling breezes and views over the city and hills. The area had social status already associated with addresses in nearby Mount Street and access to the city's piped water system. The homes built in West Perth from the early 1900s included prestigious mansions built in prominent locations and smaller working class cottages in the narrower back streets and towards the northern end of the area adjacent to the railway. In the 1920s and 1930s, many property owners in West Perth were taking advantage of the location and demand for housing by renting out rooms. If this was the case, private homes would be listed as lodging house, boarding house, flats or apartments. Sometimes large houses would actually be converted into flats or apartments.
Post Office directories show that the house was first listed in 1899 and allocated street No. 787 which changed to No. in 1908. The house was first occupied by Mrs Monica Crommelin (She moved to No. 1187 Hay Street in 1903.) The Metropolitan Water Supply Survey plan (1953) shows that the house had a full length front verandah which has since been lost. There is a stone front boundary wall marked on the plan, which may be the one extant today. Aerial photos show that the rear of the house has been modified over time. The former house is two storey painted brick, set on high stone foundation, and with a projecting bay on the west side. At 2022 the building is used as offices.

STATEMENT OF SIGNIFICANCE

The place has aesthetic and historic significance as an example of a substantial Federation Queen Anne two storey residence built in 1899.
It is an example of a mansion on the outskirts of Perth representing the wealthier class and the development of West Perth as a prestigious residential address at the period.
The place is a representative example of the changing character and growth of the city, being a former residence that has undergone a change of use to apartments, and then to commercial/professional offices.
It makes a significant contribution to the streetscape of which it forms an integral component.
It is a rare surviving two storey residence on Hay Street that has become increasingly commercial since WWII.

HISTORY

West Perth developed as suburban residential area in the late 1890s. From its inception it had the characteristics of a quality neighbourhood. The West Perth end of Hay Street was predominately prestigious homes, taking advantage of Hay Street's proximity to the city and King's Park (then known as Perth Park). The elevated location provided healthy site drainage as well as cooling breezes and views over the city and hills. The area had social status already associated with addresses in nearby Mount Street and access to the city's piped water system. The homes built in West Perth from the early 1900s included prestigious mansions built in prominent locations and smaller working class cottages in the narrower back streets and towards the northern end of the area adjacent to the railway. In the 1920s and 1930s, many property owners in West Perth were taking advantage of the location and demand for housing by renting out rooms. If this was the case, private homes would be listed as lodging house, boarding house, flats or apartments. Sometimes large houses would actually be converted into flats or apartments.
Post Office directories show that the location was taken up with a former house and fuel depot built c. 1903, occupied by William Stubbs, fuel merchant. Later (1930) this was West End Wood and Coal Depot. In 1934, the

post office directory lists that the depot's lot has been divided and adjacent to No. 1131 is a 'New building.' This was a new two storey building called 'West End Mansions' that accommodated six separate apartments.
The Metropolitan Water Supply Survey plan (1953) shows a very large brick building with a recessed verandah to the front entry. There was a large square verandah area at the back, probably for both floors. Aerial photos show that building has not changed in size at all. A photo dated 1990 held in the State Library shows the place at that time. In 1999 the place was referred to as Manus House. (Draft MHI) A real estate advertisement in 2015 shows that the interior has new ceilings, some walls removed and non-original doors and windows. At 2022 the building is the Consulate of Austria, and medical/consulting rooms. It has a prominent central gable facing the street, a small colonnaded loggia and a semi-circular balcony with classical columns.

HISTORY

West Perth developed as suburban residential area in the late 1890s. From its inception it had the characteristics of a quality neighbourhood. The West Perth end of Hay Street was predominately prestigious homes, taking advantage of Hay Street's proximity to the city and King's Park (then known as Perth Park). The elevated location provided healthy site drainage as well as cooling breezes and views over the city and hills. The area had social status already associated with addresses in nearby Mount Street and access to the city's piped water system. The homes built in West Perth from the early 1900s included prestigious mansions built in prominent locations and smaller working class cottages in the narrower back streets and towards the northern end of the area adjacent to the railway. In the 1920s and 1930s, many property owners in West Perth were taking advantage of the location and demand for housing by renting out rooms. If this was the case, private homes would be listed as lodging house, boarding house, flats or apartments. Sometimes large houses would actually be converted into flats or apartments.
The Post Office Directory first lists No. 1140 Hay Street in 1897, occupied by William Allen. It was No. 792; numbering changed in 1908. Like much of West Perth, the large house was later converted into apartments, in response to the demand for accommodation close to the city. It was operated by Mrs Monica Tomney in 1947. The Metropolitan Water Supply Survey plan (1953) shows the house as square in plan, with a full length verandah. It was likely Victorian Georgian in style with a symmetrical front and a bull nose verandah roof. There was a house identical in size and plan adjacent at No. 1138. This was demolished in the late 1990s, but an image of it dated 1984 is held in the State Library of WA (313069PD).

Aerial photos show that between 1953 and 1965 a large addition (office space) was made to the front of No. 1140, replacing the front verandah and bringing the building up to the footpath. A photo dated 1984 held at the State Library shows this 1950s-style office front, when the place was occupied by the Nurses Board of W.A. The building was called Le Souef House. The façade was face brick above a full wall of windows, with a recessed entry. The 1950s frontage has been completely replaced with a rendered front, four vertical multipaned windows, and projecting arched portico and pillars as an entry statement. The original house is still behind the office front. Aerial photos show that an addition was made to the rear in 2004/05. The topography means there is a basement and from the rear the building is two storeys. At 2022, the former house is used as offices.

HISTORY

West Perth developed as suburban residential area in the late 1890s. From its inception it had the characteristics of a quality neighbourhood. The West Perth end of Hay Street was predominately prestigious homes, taking advantage of Hay Street's proximity to the city and King's Park (then known as Perth Park). The elevated location provided healthy site drainage as well as cooling breezes and views over the city and hills. The area had social status already associated with addresses in nearby Mount Street and access to the city's piped water system. The homes built in West Perth from the early 1900s included prestigious mansions built in prominent locations and smaller working class cottages in the narrower back streets and towards the northern end of the area adjacent to the railway. In the 1920s and 1930s, many property owners in West Perth were taking advantage of the location and demand for housing by renting out rooms. If this was the case, private homes would be listed as lodging house, boarding house, flats or apartments. Sometimes large houses would actually be converted into flats or apartments.
The house at 1141 Hay Street was originally No. 795 (numbering changed in 1908) built in 1896, and occupied by Charles J. McMahon and family. The property was given the name 'Parkhurst.' In 1897, Mrs McMahon placed an advertisement in the Classified: "COOK and Laundress, or General, for small family, high wages, other servants kept. Mrs. McMahon, Parkhurst, Hay-st. west." This is an indication of the wealth and status this

family held in society, and their selection of this location for their new house would have drawn others to the area. The house is unusual for the era of construction in that it is made of limestone. Unlike many other places in West Perth kin the 1920s and 1930s, the house was not converted into apartments. As at 1949, when the post office directory was last published, the main occupant as Miss E. C. Walter.
In the 1980s the place was known as Rawlhouse, the premises of Rawlinsons (W.A.), Rawlhouse Publishing and Rawlhouse Pty Ltd. A series of photos held at the State Library show what it looked like at that time. (311609PD; 364101PD-364104PD) A real estate advertisement dated December 2021 advertising the place for lease shows photos of the interior.

HISTORY

West Perth developed as suburban residential area in the late 1890s. From its inception it had the characteristics of a quality neighbourhood. The West Perth end of Hay Street was predominately prestigious homes, taking advantage of Hay Street's proximity to the city and King's Park (then known as Perth Park). The elevated location provided healthy site drainage as well as cooling breezes and views over the city and hills. The area had social status already associated with addresses in nearby Mount Street and access to the city's piped water system. The homes built in West Perth from the early 1900s included prestigious mansions built in prominent locations and smaller working class cottages in the narrower back streets and towards the northern end of the area adjacent to the railway. In the 1920s and 1930s, many property owners in West Perth were taking advantage of the location and demand for housing by renting out rooms. If this was the case, private homes would be listed as lodging house, boarding house, flats or apartments. Sometimes large houses would actually be converted into flats or apartments.
The house at No. 1167 (originally No. 813) was built in 1903 for Norman Kirkwood Ewing, a lawyer, senator and judge. He was in WA parliament from 1901-03, having served in NSW government prior to that, and then served in the Tasmanian parliament. The corner two storey semi-detached pair (Nos. 809-811 prior to 1908) was

designed by architect (and Mayor of Subiaco) Austin Bastow and built in 1903 by Mr Henry Bentley for real estate agent Henry Laslett. An article in the 'Western Mail' provides a sketch and gives a detailed description of the houses, including the following: "Each of the houses contains nine living rooms and conveniences, stabling, etc. The internal arrangements are excellent, while the large dining and drawing rooms, being connected by folding doors, will, when thrown into one, make most desirable apartments. The corner is surmounted by a small tower, the summit of which stands 52ft. above the footpath. The roof is specially designed to afford coolness and ventilation, as is shown by the picturesque gable and corners. Architectural hygiene has been carefully considered by the architect, as is shown by the height of the rooms, 13ft. and 12ft. 6in. for the ground and first floors respectively… From the spacious balconies, more particularly that of the corner house which is returned round the Havelock-street frontage, a charming view is obtained of the west of the city, the river Swan, the distant hills of the Darling Range forming a delightful picture." (Western Mail, 30 May 1903, p. 24)A State Library of WA photo (009581D) of the buildings dated 1916 shows how they originally looked, which is much more elaborate and decorative than is seen today, due to the building having lost its verandahs that wrapped around the corner on both levels. There was a low front boundary wall with similar infill as the balcony balustrades. The entry to the houses was via stairs on Hay Street that ran parallel to the street. Road widening of Hay Street under the dedicated 'Town Planning and Development Act 1928' resulted in the site boundary being reduced to the building line. As a result, the verandah had to be removed and the entry relocated back from the building line. (Source: Owner's submission 09.08.2000).
By 1925, Nos. 1161-1163 was being run as a lodging house by Miss J. Taylor, common of larger houses in this area, in which proprietors would take advantage of the size and location. By 1930, No 1167 was operating as apartments run by Mrs L. F. Spencer. By 1982 the semi-detached pair and the adjacent house were adjoined with a glazed link and after 1985 the place was reroofed. Desborough House is the name given to 1161-1165 Hay St on the corner of Havelock St; and at 1982, No 1167 was known as Fleur House. (Refer to State Library photo 311596PD)
At 2022 the properties are now on one lot and under one ownership, used for offices.

HISTORY

Hay Street was established along with St. George's Terrace and Murray Street, as one of the main streets of Perth from the time of settlement in 1829. It remained a major commercial street throughout the twentieth century and for most of that time was characterised by traffic, including trams. The character of the street changed after it became a mall in the 1970's.
The homes built in Perth in the 1890s and early 1900s were generally larger and more elaborately detailed than the earlier simple cottages they replaced. Although influenced in their design by homes of Victoria in particular, due to the influx of migrants from the eastern states, houses in Perth tended to be constructed as single detached, or sometimes pairs of attached, houses, rather than the extensive rows of terraced houses found in eastern Australia.
Houses were generally single storey brick with corrugated iron roofs. Some more prestigious homes had slate or tiled roofs.
Stucco decoration was popular as was wrought iron lace and timber fretwork. West Perth developed as suburban residential area in the late 1890's. From its inception it had the characteristics of a quality neighbourhood. Proximity to the city centre and Kings Park (then known as Perth Park), and the elevated location which provided healthy site drainage as well as cooling breezes and views over the city and hills. The

area had social status already associated with addresses in nearby Mount Street and access to the city's piped water system.
The area was subdivided into large residential lots for development and proceed accordingly. Less prestigious areas also developed in lower parts of the area and adjacent to the railway.
The house was built in 1893 for Mr Bridge who was a blacksmith. In 1911 the Saleeba family bought it and it was divided up into apartments during the 1930s. This was common to other houses in West Perth. Prior to this it was a maternity hospital. In the late 1940s and 1950s the Saleeba family made some changes to the layout of the house. In 1979 the property was converted for use as offices.

HISTORY

Meerilinga was the home of prominent businessman, church leader and politician Frederick Illingsworth, MLA and was constructed in 1897. It was sold in 1909 and leased to tenants. From 1914 the building was leased and used as the Girls Grammar School. In 1921 the school was incorporated into the St. Mary's Church of England Girls School.
From 1922 it was leased by the Kindergarten Union, later known as the Kindergarten Association, and was a teacher training college and kindergarten. There was accommodation for trainee teachers within the former house. It was the centre for the Association until 1978. In 2000 the property was subdivided and a residential apartment complex was built. Meerilinga is used for office use.

STATEMENT OF SIGNIFICANCE

The place is of aesthetic significance as a good example of a substantial town residence of the gold rush period and in representative of the way the wealthy citizens of Perth lived around the turn of the century.
The place has importance because it is a prominently located and particularly fine example of the widely appreciated Federation Queen Anne architectural style.
The place is distinctive and forms a strong identifying composition (landmark) on the Hay Street streetscape.
The place displays the high level of craftsmanship that was characteristic of the gold boom period.
The place is important for its role in the development of the Kindergarten movement in Western Australia.
The place is of historic significance representing the development of West Perth as a prestigious residential area in the early 1900's.
The place is important for its association with prominent persons in Western Australian history, such as Frederick Illingworth, Bessie Rischbieth and Harold Boas.

HISTORY

West Perth developed as suburban residential area in the late 1890s. From its inception it had the characteristics of a quality neighbourhood. The West Perth end of Hay Street was predominately prestigious homes, taking advantage of Hay Street's proximity to the city and King's Park (then known as Perth Park). The elevated location provided healthy site drainage as well as cooling breezes and views over the city and hills. The area had social status already associated with addresses in nearby Mount Street and access to the city's piped water system. The homes built in West Perth from the early 1900s included prestigious mansions built in prominent locations and smaller working class cottages in the narrower back streets and towards the northern end of the area adjacent to the railway. In the 1920s and 1930s, many property owners in West Perth were taking advantage of the location and demand for housing by renting out rooms. If this was the case, private homes would be listed as lodging house, boarding house, flats or apartments. Sometimes large houses would actually be converted into flats or apartments.
Post Office directories show the first house on the corner of Hay and Emerald Streets was listed in 1903 and allocated street No. 825 which changed to No. in 1908. The house was first occupied by Mrs Monica Crommelin. (She had earlier lived at No. 1131 Hay Street.) In 1930, Thomas Stewart was running the place as apartments. This was common of larger houses in this area, in which proprietors would take advantage of the size and location.
In 1940, the directory lists the location as vacant. Architect, Marshall Clifton carried out alterations and additions at this time. The lower gabled room on the corner is an addition, as is the face brick projecting porch and

window garden bed feature, with a boundary wall to match. It is likely the original house was two storey, as the door on the upper level would have led to a first floor verandah. It now leads to a balcony over the porch addition. From 1941 the house was a medical practice for Dr. G. A. Kelsall. He was the medical director of the Red Cross Blood Transfusion Services in WA in the mid-late 1940s.The Metropolitan Water Supply Survey plan (1954) shows the house plan as it is seen in a 1982 photo, with the small new front porch verandah, and an addition at the rear. In the 1990s the place was occupied by Finkelstein Hickmott, accountants. A real estate advertisement advertising the place for sale in December 2019 does not include interior photos. A real estate advertisement advertising the place for lease in February 2022 includes 1940 plans drawn by architect Marshall Clifton.
At 2022 the place is for lease.

STATEMENT OF SIGNIFICANCE

The place has aesthetic and historic significance as an example of a 1903 Federation style residence constructed during the period of economic affluence and increased development that followed the gold boom. The building reflects the way of life of a wealthier class of people who lived in this location in the late nineteenth and early twentieth century.
The 1940 alterations by Marshall Clifton mark a change from residential to a commercial use, and represent the changing character of West Perth since the Inter-War period. The place has aesthetic significance for its contribution to the streetscape of which it forms an integral component.

NATURE OF SIGNIFICANCE

HERCON Value A - Its importance in demonstrating the evolution or pattern of Perth's history

The place has historic significance as an example of a 1903 Federation style residence constructed during the period of economic affluence and increased development that followed the gold boom.
The building reflects the way of life of a wealthier class of people who lived in this location in the late nineteenth and early twentieth century.

HERCON Value B - Its importance in demonstrating rare, uncommon or endangered aspects of Perth's heritage

HERCON Value C - Its potential to yield information that will contribute to an understanding of Perth's history

HERCON Value D - Its importance in demonstrating the characteristics of a broader class of places

The 1940 alterations by Marshall Clifton mark a change from residential to a commercial use and represent the changing character of West Perth since the Inter-War period.

HERCON Value E - Any strong or special meaning it may have for any group or community because of social, cultural or spiritual associations

HERCON Value F - Its importance in exhibiting particular aesthetic characteristics valued by any group or community

The place has aesthetic significance as an example of a 1903 Federation style residence constructed during the period of economic affluence and increased development that followed the gold boom. The place has aesthetic significance for its contribution to the streetscape of which it forms an integral component.

HERCON Value G - Any special association it may have with the life or work of a person, group or organization of importance in Perth's history

HERCON Value H - Its importance in demonstrating a high degree of creative or technical achievement

HERCON Value I - Any HERCON Value I - Any other characteristic it may have that in the opinion of the decision making body is relevant

CONDITION AND AUTHENTICITY

Condition	Good
Building Fabric Authenticity	Medium. Largely as originally constructed with detail intact.

CLASSIFICATION OF SIGNIFICANCE

Considerable – Category 2 - Very important to the heritage of the locality.

HISTORY

West Perth developed as suburban residential area in the late 1890s. From its inception it had the characteristics of a quality neighbourhood. The West Perth end of Hay Street was predominately prestigious homes, taking advantage of Hay Street's proximity to the city and King's Park (then known as Perth Park). The elevated location provided healthy site drainage as well as cooling breezes and views over the city and hills. The area had social status already associated with addresses in nearby Mount Street and access to the city's piped water system. The homes built in West Perth from the early 1900s included prestigious mansions built in prominent locations and smaller working class cottages in the narrower back streets and towards the northern end of the area adjacent to the railway. In the 1920s and 1930s, many property owners in West Perth were taking advantage of the location and demand for housing by renting out rooms. If this was the case, private homes would be listed as lodging house, boarding house, flats or apartments. Sometimes large houses would actually be converted into flats or apartments.
The house at 1202 Hay Street was built in 1896 and was originally No. 832. In 1897 the main occupant was John S. Read. The house was called 'Staplehurst.' Read was Vice=President of the Perth Stock Exchange, and among the elite of society. After his wife Florence died suddenly in the house in 1898, at age 42, her funeral was attended by soon to be Premier, Sir John Forrest, as well as a number of other parliamentarians and dignitaries.

Numbering changed in 1908, along with the tenant, who was then Dr. E. Paget Thurston.
A website for one of the 2022 tenants of the building, Chieftan Securities, refers to the building as Emerald House. It reads: “Emerald House has strong connections with the iconic West Australian entrepreneurial community. The building was originally a private dance studio but by the 1940s had become a boarding house. The historical site was transformed into an office building by the late 1980s and housed many top firms including leading Perth corporate law firm Blakiston & Crabb (recently acquired by Gilbert & Tobin).” It should be noted that the place was not originally a dance studio, as stated above. However, from 1923 to 1925 the place was divided into two, and Miss M. Kilminster, a dance teacher was occupant at 1202a Hay Street. In 1930, as was typical of many large houses in West Perth, the house was operating as apartments.
The Metropolitan Water Supply Survey plan (1953) shows the house set well back, and it has four separate brick additions or structures on its east side, hard up against the boundary fence. There was no boundary fence at the rear and the lot continues to three properties at 7-8-9 Mayfair Street. Aerial photos show these were demolished between 1985 and 1995, and this space became a carpark. This area is still one lot.
At 2022 there are several tenants in the former house, which is used for professional offices.

WESTERN AUSTRALIAN HISTORIC THEME

1. Demographic settlement and mobility - 104 Land allocation and subdivision

STATEMENT OF SIGNIFICANCE

The place has aesthetic significance as a substantial Federation Queen Anne, two storey residences built in 1896.
It is an example of a mansion on the outskirts of Perth occupied by the wealthier class and reflects the development of West Perth as a prestigious residential suburb.
The place is representative of the changing character and growth of the city, being former residential properties that have undergone a change of use to apartments, and then to commercial/professional offices.
Despite the visual intrusion of the high boundary wall, the place makes a significant contribution to the streetscape of which it forms an integral component.
It is a rare surviving grand residence on Hay Street that has become increasingly commercial since WWII.

NATURE OF SIGNIFICANCE

HISTORY

Ross Memorial Church was constructed in 1916-1917 as the Anglican Church for West Perth. The Church outgrew its former West Perth location, and this location accommodated the larger building. The hall was built first and opened in 1913. As the congregation outgrew this building it was decided to raise funds for a new church building. The foundation stone was laid by the Rt. Hon. Sir John Forrest assisted by Lady Forrest on 1st July 1916. The architect was James Hine and the builder was R.A. Gamble. It was named for Rev Daniel Ross who was the Minister in 1912 at the time of the church's construction and who died in 1918. During the 1960s the character of West Perth changed, and the church was no longer an important part of the community. In 1987 the hall was demolished, and a retail building and meeting room were constructed using bricks from the hall. The Church is one of the three 'Uniting Church in the City' which also includes Wesley Church and Trinity Church. The Church is currently used by the Uniting Church for Sunday services as well as a place of meditation. The Karen Baptist Group from Thailand also uses the church for their services.

HISTORY

The Graham Flats were designed by the State Housing Commission for pensioners and State Housing Commission tenants. The complex included 70 flats, of which 50 were allocated to pensioners. It was opened by the Premier A. R. G. Hawke in 1958. The flats eased the shortages of State housing after World War Two and was one of many multi storey flats which were built across the metropolitan area. The flats were named after WA Minister for Housing Herb Graham (1953 to 1959). Graham focused on the needs of pensioners utilising State Housing by locating the complex close to public transport and the city. Design features included seats in showers, open shelving in the kitchen, however there was no lift installed which was a criticism of the design. A lift was installed in 1987.
Many residential buildings within West Perth had been converted to flats in the 1950s. The landscaping was designed by John Oldham and used local plant species. They were designed so residents had places to relax in a calm environment. The residents formed a social committee and held social events.

7.Governing - 7.6.12 Conserving Perth's (Australia's) heritage
8. Developing Perth's Cultural Life - 8.13 Living in cities & suburbs
9. Marking the Phases of Life - 9.6.2 Looking after the infirm & the aged

STATEMENT OF SIGNIFICANCE

The place was constructed by the State Housing Commission to provide accommodation for elderly pensioners. It is one of the early attempts by the Western Australian State Government in providing purpose built, multi-storey public housing, and as such, it represents the State Government's adoption of the post-World War II social planning philosophies already being implemented in Europe and America at the time.
The place illustrates contemporary attitudes towards the housing and care of elderly pensioners and represents an early attempt to provide public housing for different household types close to the centre of the city during a time of rapid population growth.
The place is a good example of public housing in the Post-War International style due to its site planning, moderate proportions, careful massing, contrasting materials, considered detailing and generally high quality of architectural design.
The place's north facing landscaped area and the landscape treatments of the site, designed by prominent landscape architect John Oldham, contribute to the aesthetic quality of the development.
The place was associated with the debate concerning the provision of appropriate public housing in cities, and the question of high-rise accommodation, prevalent in western countries in the post-World War II period which involved architects, planners and sociologists.
The wide usage of the gardens by both residents and workers demonstrates the continuing contribution of Graham Flats to the community's sense of place.
The place was designed by Neville Coulter, design architect, of the State Housing Commission.

HISTORY

West Perth developed as suburban residential area in the late 1890s. From its inception it had the characteristics of a quality neighbourhood. The West Perth end of Hay Street was predominately prestigious homes, taking advantage of Hay Street's proximity to the city and King's Park (then known as Perth Park). The elevated location provided healthy site drainage as well as cooling breezes and views over the city and hills. The area had social status already associated with addresses in nearby Mount Street and access to the city's piped water system. The homes built in West Perth from the early 1900s included prestigious mansions built in prominent locations and smaller working-class cottages in the narrower back streets and towards the northern end of the area adjacent to the railway. In the 1920s and 1930s, many property owners in West Perth were taking advantage of the location and demand for housing by renting out rooms. If this was the case, private homes would be listed as lodging house, boarding house, flats or apartments. Sometimes large houses would actually be converted into flats or apartments. The increase in density created the demand for more facilities, and while there were several shops along Hay Street from the early 1900s, the new row of seven shops built in 1923 catered to the growing population.
The Metropolitan Water Supply Survey plan (1953) shows the row of seven shops, each with re-entrant doors, the one on the corner of Colin Street with a truncated entrance, and with various sized brick storerooms behind. Aerial photos show these seem to remain the same configuration and size today. At 2022 the shops still have their original awning. The parapet is a simple geometric shape with piers. The corner shop has been modified.

HISTORY

West Perth developed as suburban residential area in the late 1890s. From its inception it had the characteristics of a quality neighbourhood. The West Perth end of Hay Street was predominately prestigious homes, taking advantage of Hay Street's proximity to the city and King's Park (then known as Perth Park). The elevated location provided healthy site drainage as well as cooling breezes and views over the city and hills. The area had social status already associated with addresses in nearby Mount Street and access to the city's piped water system. The homes built in West Perth from the early 1900s included prestigious mansions built in prominent locations and smaller working-class cottages in the narrower back streets and towards the northern end of the area adjacent to the railway.

There were earlier houses in this location, numbered 848-850. The post office directory has no listing for between 1144 and 1152 in 1908, indicating the new commercial building was under construction. In 1909, the first occupants are Mrs D. Hewson, newsagent and stationer and Edwin S. Spenser, builder. Nigel Hewson was also listed, suggesting there was a residence behind the shop. When the Post Office Directory ceased publication in 1949, the building was occupied by a hairdresser and a butcher.

Joe's Bakery has been in the building since 1986. The family business' website states: "With Joe making and baking everything on site, it was soon renamed Joe's by the locals. In January 2016, Joe's Cake Kitchen expanded into the shop next door and reopened with a fresh new look, expanded seating and servery and is now called Joe's Bakery West Perth…Joe's has become a landmark in West Perth, a home to hundreds of people for lunches and catering around and beyond the city." A 1988 photo held at the State Library of WA

shows that Joe's Cake Kitchen was in the eastern side of the building and West End Cakes was on the east side. At 2022, the bakery occupied the whole building, with a modern fitout, but the frontage retains both doors.

HISTORY

Demolished c. 1955. Post Office directories show that the house was listed by 1897 and allocated street No. 859 which changed to No. 1255 in 1908. The house was first occupied by William Massey. The house did not seem to have been converted to apartments or have rooms rented out, like many large properties in West Perth. A long term resident was Mrs M. Landeur (c 1930 to 1949 or later). The Metropolitan Water Supply Survey plan (1953) shows an unusual plan form, with the house having two faceted bays that face the east, and the entrance to the house on the east side, well back from the street. There was a return verandah that wrapped around the house from the street to the entrance. There was also a large verandah at the rear, and a complex of other structures. Aerial photos show the house was demolished between 1953 and 1961 for the current commercial buildings.

Physical Description	

This is one of a group of 5 terraced buildings that were originally residential dwellings.
This dwelling differs from the others in that it has a pyramidal roof with tall finial. A prominent faceted bay property from the building which has an iron waning roof that has bracket supports. The roof parapet has some ornament including stucco bands and triangular features. These shapes are repeated in stucco reliefs on pillars and on the chimney. Verandah roof is supported by iron pillars. Tall brick chimney with stucco relief at the head with terra-cotta pots. Boundary fence is continued along the whole terrace with wrought iron and brick pillars.

HISTORY

The terraces were originally built as residences and business premises in 1904. The property was owned by Ellen and Robert Howard. It was then sold to Philip Cantor in 1905. Each residence was named except No. 76. The names were Kent Villa (No. 74), Echuca (No. 76), Heimath (No. 80) and Wainera (No. 82). The houses were mainly occupied for five to ten years by tenants. Ownership changed in the 1920s and 1930s. in 1936 Margaret Dwyer bought the property and it continued to be owned by the family until 1962. Renovations occurred in the 1960s to modernize the terraces, including moving the bathrooms inside. The whole terrace group was bought by Frank Baden-Powell in 1969 who was responsible for opening Perth's first late night coffee house Janey's in No. 74. Internal alterations were made to No. 78 and 80 for its use as a restaurant The Olive Tree in the 1970s. Ownership changed in 1978 and again in the 1980s and 1990s. The terraces are currently used for commercial purposes. West Perth developed as suburban residential area in the late 1890's. From its inception it had the characteristics of a quality neighbourhood. Proximity to the city centre and Kings Park (then known as Perth Park), and the elevated location which provided healthy site drainage as well as cooling breezes and views over the city and hills. The area had social status already associated with addresses in nearby Mount

Street and access to the city's piped water system. The area was subdivided into large residential lots for development and proceed accordingly. Less prestigious areas also developed in lower parts of the area and adjacent to the railway.

WESTERN AUSTRALIAN HISTORIC THEME

1. Demographic settlement and mobility - 111 Depression and boom
3. Occupations - 311 Hospitality industry and tourism

AUSTRALIAN HISTORIC THEME

4. Building Settlements, Towns and Cities - 4.1.2 Making suburbs

STATEMENT OF SIGNIFICANCE

The place is a rare, extant example of a terrace of five former residences in the west Perth area.
The place is representative of the original settlement patterns of West Perth, with substantial residences in the more prominent locations and modest, working class accommodation in the side streets and areas close to the railway.
Although the place has been altered, it has aesthetic value for its robust and mildly exuberant Federation Free style façade.
The change of use of the place, from residential to commercial, illustrates the changes that have occurred in West Perth, largely in the post-World War Two period.

NATURE OF SIGNIFICANCE

HERCON Value A - Its importance in demonstrating the evolution or pattern of Perth's history

HISTORY

West Perth developed as suburban residential area in the late 1890s. From its inception it had the characteristics of a quality neighbourhood. The West Perth end of Hay Street was predominately prestigious homes, taking advantage of Hay Street's proximity to the city and King's Park (then known as Perth Park). The elevated location provided healthy site drainage as well as cooling breezes and views over the city and hills. The area had social status already associated with addresses in nearby Mount Street and access to the city's piped water system. The homes built in West Perth from the early 1900s included prestigious mansions built in prominent locations and smaller working class cottages in the narrower back streets and towards the northern end of the area adjacent to the railway. The two storey commercial building at 1288 Hay Street that addresses the corner of Outram Street was built in 1908. The post office directory first lists the building in 1909, and the occupant was Edgar Woodbridge, grocer and wine and spirit merchant. Woodbridge had held a liquor licence prior to this in Subiaco. Historically, the shop owner's residence would have been on the upper floor. The two adjacent tenancies on Hay Street (Nos. 1284 -1286) have been various businesses over the years but the

corner tenancy (No. 1288) may have been a liquor and wine merchants continuously since 1909. A random selection of post office directory listings for No. 1288 Hay Street is as follows:1910: John Cowell, grocer and wine and spirit merchant1918: E. Veitch, grocer and wine and spirit merchant1924: William Owen, grocer and wine merchant1928: William Owen, grocer and wine merchant1930: James Bowdler, grocer and wine and spirit merchant1935: James Bowdler, grocer and wine and spirit merchant1942: Ernest W. Meredith, grocer and wine and spirit merchant1949: Ernest W. Meredith, grocer and wine and spirit merchant.
A photo held at the State Library of WA dated 1983 shows the place was Gangemi's Supermarket and Hallmark Cellars. At this time the corner entrance was closed off. At 2022, the place is Gangemi's 'Fine Wines and Food.' The company, according to its Facebook page, was established in 1911. This date refers to the issue of the liquor licence, as thought by the proprietors.
The two-storey commercial building has a corner pediment with label mould, and decorative battlement parapets on each street elevation. The parapet adjoins Nos. 1284 and 1286, but the three shops are on separate lots under separate ownership. The current tenant at 2022 advised that the owner of the corner shop is Joan Gangemi, who was born in the building.

Architectural Style 1 Specific	Queen Anne
Architectural Style 2 General	
Architectural Style 2 Specific	
Archaeology	
Physical Description	

Two storey (originally) residential building with side verandahs with timber posts and ornamental brackets. Smooth render to walls with some rustication ornament on the corners of the projecting facade, gable with Oriel windows. Building probably dating form early 1900s with numerous alterations circa 1940s.
Internally the building has been extensively altered and adapted. The original staircase remains extant as do some doors and windows. Recent (1992) adaptation has involved the introduction of extensive new material. Internally the detail of rooms to the front of the house (addressing Hay Street) are distinctly different to the rooms in the original, rear, section of the building. Architraves, skirtings, door and window details establish the construction date for this part of the house as circa 1940 rather than the turn of the century.
The building is not located in an area characterised by other heritage buildings, however it is a distinctive landmark in central Hay Street.

HISTORY

West Perth developed as suburban residential area in the late 1890s. From its inception it had the characteristics of a quality neighbourhood. The West Perth end of Hay Street was predominately prestigious homes, taking advantage of Hay Street's proximity to the city and King's Park (then known as Perth Park). The elevated location provided healthy site drainage as well as cooling breezes and views over the city and hills. The area had social status already associated with addresses in nearby Mount Street and access to the city's piped water system. The homes built in West Perth from the early 1900s included prestigious mansions built in prominent locations and smaller working-class cottages in the narrower back streets and towards the northern end of the area adjacent to the railway. In the 1920s and 1930s, many property owners in West Perth were taking advantage of the location and demand for housing by renting out rooms. If this was the case, private

homes would be listed as lodging house, boarding house, flats or apartments. Sometimes large houses would actually be converted into flats or apartments.
Post Office directories show that the house was first listed in 1906 and allocated street No. 886. The house was first occupied by Mrs E. Birch. Numbering changed to No. 1298 in 1908, at which time Mrs Anne Birch was listed as the main occupant. (It may be the same person, and the 'E' was her husband's initial.) The house was named 'Mowerinup' after a property in Serpentine where Anne had grown up. Anne was one of 11 children born to Frederick and Phoebe Hymus, and the oldest daughter. The Hymus family has come from England to Australind in 1842, aboard the barque, 'Diadem'. In 1909 Anne Birch, aged 78 yrs, died in the house at Hay Street. The property was sold as part of her deceased estate. In 1909, Mrs Clarence E. J. Wilkinson, formerly of 45 Outram Street, had moved into Mowerinup. A later occupant was Dr John J. Holland (1915-1920). In 1930 the occupant was Leo Brice. Under the Brice's ownership, the house was converted into flats. In 1933 the extensive alterations and additions were done by architects Powell, Cameron and Chisholm. The name changed to Wiluna Flats. In 1949, when post office directories ceased publication, Wiluna Flats was being operated by Mrs H. Brice.The Metropolitan Water Supply Survey plan (1953) shows the lot extends north to Cook Street, and the place took up about three quarters of the lot. A photo held at the State Library of WA dated 1983 shows the place as 'Castellorizo'. A later photo (1994) shows that the spelling changed to 'Kastellorizo.' The Wiluna name is concealed under the 'Kastellorizo' sign. A 2013 real estate website advertising the place for lease as medical/consulting rooms shows some internal photos, including the timber staircase and other original features. At 2022, the place is a distinctive tall, narrow, two storey former residential building with side verandahs with timber posts and ornamental brackets, and timber balustrades. It has smooth render to walls with some rustication ornament on the corners of the projecting facade, and a gable with Oriel window. The sills are face brick and the windows have flat curved awnings. The east side elevation has face brick with rendered bands. The place is occupied as offices.

HISTORY

West Perth developed as suburban residential area in the late 1890s. From its inception it had the characteristics of a quality neighbourhood. The West Perth end of Hay Street was predominately prestigious homes, taking advantage of Hay Street's proximity to the city and King's Park (then known as Perth Park). The elevated location provided healthy site drainage as well as cooling breezes and views over the city and hills. The area had social status already associated with addresses in nearby Mount Street and access to the city's piped water system. The homes built in West Perth from the early 1900s included prestigious mansions built in prominent locations and smaller working-class cottages in the narrower back streets and towards the northern end of the area adjacent to the railway. In the 1920s and 1930s, many property owners in West Perth were taking advantage of the location and demand for housing by renting out rooms. If this was the case, private homes would be listed as lodging house, boarding house, flats or apartments. Sometimes large houses would actually be converted into flats or apartments.
Post Office directories show that the house was first listed in 1900 and allocated street No. 870 which changed to No. 1300 in 1908. The house was first occupied by James Coultas, and the house was named 'Valetta.' The following year the occupant was William Hardie. Like much of West Perth, the large house was later converted into apartments, in response to the demand for accommodation close to the city. By 1920, the place was being run as a lodging house by Mrs C. Tolland.
The Metropolitan Water Supply Survey plan (1953) shows a house with two projecting bays to the street and a full front verandah. There are various outbuildings in the back yard. Aerial photos show that in the mid-1970s the

front verandah was removed and an addition was built that extends to the street. From the street the house (apart from the hipped roof) is not visible behind a flat roofed, face brick shopfront. From Cook Street, however, the rear of the house is visible, and is a red face brick, single story house on limestone foundations.
At 2022, the place is Cigar Social, a 'private Members-only business lounge.'

Physical Description	

Two storey building, originally residential with hipped roofs and tall chimneys with terracotta pots. Brackets to eaves & chimneys. Prominent flying gable with timber screen to street front bay. Awnings to windows are not original. Two storey verandah under separate roof with timber posts ornamental brackets, decorated frieze and balustrade distinguished by shingled roof to ground floor verandah. Walls originally tuck-pointed brick, now painted. Windows double hung sashes with recent obscure glazing to some sashes. Restored verandah to north east side of house. Original verandah to north (front) elevation removed. Entry statement and courtyard to east of main building under tiled roofed loggia not original.
Not part of an intact streetscape. The building is a landmark at the western end of Hay Street. Interior has been restored using fabric in the style of the original. This includes ceilings, cornices, architraves, ceiling roses, etc. Some structural alterations including removal of a wall to create an archway, internal partition walls added in some areas and a new single storey extension to the rear. The original staircase remains extant as does one fireplace at first floor level and the general internal layout, with some alterations to partitions.

HISTORY

West Perth developed as suburban residential area in the late 1890. From its inception it had the characteristics of a quality neighbourhood. Proximity to the city centre and Kings Park (then known as Perth Park), and the elevated location which provided healthy site drainage as well as cooling breezes and views over the city and hills. The area had social status already associated with addresses in nearby Mount Street and access to the city's piped water system. The area was subdivided into large residential lots and development proceeded accordingly. Less prestigious areas also developed in lower parts of the area and adjacent to the railway.

The homes built in West Perth from the early 1900s included prestigious mansions built in prominent locations and smaller working-class cottages in the narrower back streets and towards the northern end of the area adjacent to the railway.
An advertisement in 1909 for a good cook indicates that the house was built in the early 1900s. Mrs Couch placed the advertisement and it indicated that the household was three people and no children. The house was known as Abertawe during the Couch's residence.
By 1920 the house had been divided into flats.
In 1924 Henry Guthrie lived at the property which was called Kelvinside. Guthrie who was a builder and contractor. He was a member of the WA Turf Club. Louisa Guthrie died in 1943 and Henry in 1946.In 1950 the WA Society for Spastic and Crippled Children was based in the building. By 1980 the Society had changed its name to the Slow Learning Children's Group and were still located at the same address.

8. Developing Perth's Cultural Life - 8.12 Living in & around Australian homes

STATEMENT OF SIGNIFICANCE

The place has aesthetic significance as a fine example of a two-storey residence designed in the Federation Queen Anne style, characterised by a picturesque asymmetrical form, contrasting horizontal banding and ornate cornices, prominent gables, tall chimneys and terracotta roof ornaments.
It exhibits many of the more elaborate details of the style with an ornate turned timber verandah, multi-paned windows and casements with Art Nouveau inspired leadlights.
The place is important in contributing to the community's sense of place, as a landmark historic building, situated on the high point of Hay Street at the western end of West Perth.
The place has historic value as an example of a larger former residence with an associated medical practise, once a relatively common feature of settlement in West Perth.
The place has historic value because it reflects the way of life of upper middle class and professional families living in West Perth in the first half of the twentieth century, who built substantial residences set in expansive garden settings.
The place has rarity value in the City of Perth, as one of a diminishing number of intact substantial former residences, which has been retained on its original large lot.

HISTORY

Hay Street was established along with St. George's Terrace and Murray Street, as one of the main streets of Perth from the time of settlement in 1829. It remained a major commercial street throughout the twentieth century and for most of that time was characterised by traffic, including trams. The character of the street changed after it became a mall in the 1970's. Example of a commercial building constructed in Perth during the period of expansion and development that followed the gold rush of the 1890's. The homes built in Perth in the 1890s and early 1900s were generally larger and more elaborately detailed than the earlier simple cottages they replaced. Although influenced in their design by homes of Victoria in particular, due to the influx of migrants from the eastern states, houses in Perth tended to be constructed as single detached, or sometimes pairs of attached, houses, rather than the extensive rows of terraced houses found in eastern Australia. Houses were generally single storey brick with corrugated iron roofs. Some more prestigious homes had slate or tiled roofs. Stucco decoration was popular as was wrought iron lace and timber fretwork. West Perth developed as suburban residential area in the late 1890's. From its inception it had the characteristics of a quality

neighbourhood. Proximity to the city centre and Kings Park (then known as Perth Park), and the elevated location which provided healthy site drainage as well as cooling breezes and views over the city and hills. The area had social status already associated with addresses in nearby Mount Street and access to the city's piped water system. The area was subdivided into large residential lots for development and proceed accordingly. Less prestigious areas also developed in lower parts of the area and adjacent to the railway. (Ian Kelly; 'The Development of Housing in Perth (1890-1915)'; Unpub . thesis UWA 1992; p96.) The homes built in West Perth from the early1900's included prestigious mansions built in prominent locations and smaller working class cottages in the narrower back streets and towards the northern end of the area adjacent to the railway.
Ref City of Perth - Draft Municipal Heritage Inventory, 2001The Walsh family lived at the property in 1915 until the 1950s. The house may have been divided into apartments in the 1940s as noted in an advertisement in 1942.

STATEMENT OF SIGNIFICANCE

The place is of aesthetic significance as an example of a residential building dating from period around the turn of the century.
The increasing affluence of the community following the gold boom is reflected in the increased use of decoration.
The place is of aesthetic significance as an example of a residential building dating from the mid twentieth century.
The place is of historic significance because it reflects the way of life of the wealthier residents of Perth in the late nineteenth and early twentieth century.
The place is a representative example of a residential property in Perth dating from the late nineteenth to early twentieth century.
The place represents the changing character of the Perth community from the post gold rush settlement period to the period of settlement by various ethnic communities, to the present.
The place is a representative example of a residential property in West Perth that has undergone a change of use to commercial/professional offices with the changing character and growth of the City.

NATURE OF SIGNIFICANCE

HERCON Value A - Its importance in demonstrating the evolution or pattern of Perth's history

The place is of historic significance because it reflects the way of life of the wealthier residents of Perth in the late nineteenth and early twentieth century.

HERCON Value B - Its importance in demonstrating rare, uncommon or endangered aspects of Perth's heritage

HERCON Value C - Its potential to yield information that will contribute to an understanding of Perth's history

HERCON Value D - Its importance in demonstrating the characteristics of a broader class of places

The place is a representative example of a residential property in Perth dating from the late nineteenth to early twentieth century.
The place represents the changing character of the Perth community from the post gold rush settlement period to the period of settlement by various ethnic communities, to the present.
The place is a representative example of a residential property in West Perth that has undergone a change of use to commercial/professional offices with the changing character and growth of the City.

Physical Description	

EXTERNAL
Two storey tuck pointed masonry former residence now used as a commercial office. Hipped and gabled tiled roof with tall chimneys with corbelling, half timbered front gable, two storey restored verandah with timber balustrade and original pressed metal lining. Original casement windows and new leadlights. Terracotta porch tiles and limestone front wall not original.
INTERNAL
Internally the building has been extensively restored and comprises a mix of original and new detailing. The original stair remains as does the Arts and Crafts style fireplace surround in the front room. Joinery is generally simple in detail reminiscent of the Arts and Crafts style. A number of doors etc have been relocated and new doorways created. The building has been extended at the back in the style of the original. Non original skylight over stairs. Archways, cornices and ceiling roses are both original and recent.
STREETSCAPE
Not part of an intact streetscape.

HISTORY

West Perth developed as suburban residential area in the late 1890s. From its inception it had the characteristics of a quality neighbourhood. The West Perth end of Hay Street was predominately prestigious homes, taking advantage of Hay Street's proximity to the city and King's Park (then known as Perth Park). The elevated location provided healthy site drainage as well as cooling breezes and views over the city and hills. The area had social status already associated with addresses in nearby Mount Street and access to the city's piped water system. The homes built in West Perth from the early 1900s included prestigious mansions built in prominent locations and smaller working class cottages in the narrower back streets and towards the northern

end of the area adjacent to the railway. In the 1920s and 1930s, many property owners in West Perth were taking advantage of the location and demand for housing by renting out rooms. If this was the case, private homes would be listed as lodging house, boarding house, flats or apartments. Sometimes large houses would actually be converted into flats or apartments.
Post Office directories show that numbering changed as more houses were built in this section of Hay Street, so the date of construction is difficult to determine without a Rate Book search. It is certainly a Federation Queen Anne style, probably built in the first decade of the 1900s. The Metropolitan Water Supply Survey plan (1953) shows a large building with a projecting bay on the east end and a verandah at front and back.
Aerial photos show that by 1964 the rear yard is being used for carparking, suggesting it has already undergone a change of use. A photo held at the State Library of WA dated 1983 shows the former house as Baptist Union House. At this time it was painted white with a tiled roof. In 2001, additions to the rear were made, bringing the buildings all the way through to Cook Street.
At 2022 the house has been restored to its red brick tuck pointed facade with stucco bands and accents over the arched windows. It has a corrugated iron roof and timber balustrades and frieze to the balconies. It is called 'Yorganop" and is Western Australia's only Aboriginal foster care agency.

STATEMENT OF SIGNIFICANCE

The place has aesthetic and historic significance as an example of a Federation Queen Anne style residence constructed during the period of economic affluence and increased development that followed the gold boom. It reflects the way of life of a wealthier class of people who lived in this location in the late nineteenth and early twentieth century.
The place is a representative example of the changing character and growth of the city, being a former residence that has undergone a change of use to commercial/professional offices.
It has aesthetic significance for its contribution to the streetscape of which it forms an integral component.
It is a rare surviving grand residence on Hay Street that has become increasingly commercial since WWII.

NATURE OF SIGNIFICANCE

HERCON Value A - Its importance in demonstrating the evolution or pattern of Perth's history

The place has aesthetic and historic significance as an example of a Federation Queen Anne style residence constructed during the period of economic affluence and increased development that followed the gold boom. It reflects the way of life of a wealthier class of people who lived in this location in the late nineteenth and early twentieth century.

HERCON Value B - Its importance in demonstrating rare, uncommon or endangered aspects of Perth's heritage

It is a rare surviving grand residence on Hay Street that has become increasingly commercial since WWII.

HERCON Value C - Its potential to yield information that will contribute to an understanding of Perth's history

HISTORY

Trams were introduced in 1899 and were run by separate local councils. In 1913 the State Government took over the operations. At that time tram routes totalled 23 miles (37 km) and they were powered by coal with electric motors. The poles are early light poles which were used as tram stops. The poles located on Hill Street were on the route which travelled from the line from Hay Street and went into East Perth along Hill and Wittenoom Street to Plain Street. This line opened in 1901.
The tram depot was located in East Perth where the present East Perth train station is now located. In 1950 motor buses replaced the trams and trolley buses, which had been introduced in the 1930s. By 1958 all trams had stopped running.

HISTORY

Building was commissioned by the Roman Catholic Church and named after a small town in Ireland. The land on which it was built as owned by the Mercy Sisters who originally came to WA from Ireland. The building was designed to provide teachers' accommodation for the adjoining training college. Mercedes College – The Old House was used for teacher training after 1937 when the boarders moved to Santa Maria College in Attadale. Probably the only Art Deco building designed by Cavanagh & Cavanagh. The bas relief is the work of West Australian sculptor Edward Kohler who also worked on the Piccadilly Theatre and Arcade and the Emu Brewery.

HISTORY

Although East Perth was included on the plan for Perth from earliest colonial surveys, the area remained substantially undeveloped until the period of expansion that accompanied the gold rush. Part of the area had been designated for cemetery purposes which probably detracted from its attractiveness for settlement. In the 1870s East Perth developed as a residential area, as the city population gradually increased. However, it underwent tremendous growth during the late-nineteenth century, which was a result of the gold boom. The increase in wealth encouraged speculative development of housing in Perth, Fremantle and other new areas close to these centres such as Subiaco, East Perth and North Perth. The homes built in Perth in the 1890s and early 1900s were generally larger and more elaborately detailed than the earlier simple cottages they replaced. Although influenced in their design by homes of Victoria in particular, due to the influx of migrants from the eastern states, houses in Perth tended to be constructed as single detached, or sometimes pairs of attached, houses, rather than the extensive rows of terraced houses found in eastern Australia. Houses were generally single storey brick with corrugated iron roofs. Some more prestigious homes had slate or tiled roofs. Stucco decoration was popular as was wrought iron lace and timber fretwork.
There was a row of four houses on Hill Street opposite Wellington Square from 1909-1910.The Post Office Directory first lists No. 1925 in 1911. The Metropolitan Water Supply Survey plan (1950) shows them all extant, but by 1974, No. 27 has been demolished for a new building, and by 2000 the rest of the block had been demolished. Only No. 125 remains to show what the street was like historically.

House (fmr), 125 Hill Street is a single storey Federation Queens Anne with a pitched hipped roof and a prominent gable to the street front with pebbledash half-timbered effect and timber brackets. The awning to the front window is supported on timber brackets, and the half-length verandah to the entry is part of the main roof, with decorative posts and brackets. Windows have decorative stucco sills and the front door has side and top lights.

HISTORY

At the turn of the century the site of the Queen Elizabeth II Medical Centre in Nedlands was a grazing place for cattle owned by Edward Browne, the founder of Browne's Dairy. The land was purchased by the State Government in 1910 and from 1922 controlled by the University of Western Australia under a 999-year lease from the Government. When the Chest Hospital was proposed the site was designated for development as a medical centre with a teaching hospital as the core. (QEII website)
Construction work began in 1956 on the Perth Chest Hospital for the Department of Public Health. It was designed by the Department of Public Works architect, and the builder was H. A. Doust Pty Ltd. Thomas Street passed diagonally to the east of the site at the time the first two structures were designed. Owing to its bulk, the Chest Hospital was a prominent building against King's Park bushland to the east. The building opened in 1958.

It was built to replace the Wooroloo Sanatorium and became the main treatment centre for tuberculosis (TB) and other pulmonary diseases. It represents the changing practice in treatment of TB following WWII, when drugs were used to combat the disease, rather than simply providing a place of isolation and nursing care. With the decline of TB cases the hospital began to admit general chest patients.
The Perth Chest Hospital was renamed Sir Charles Gairdner Hospital in 1963. It was renamed again in 1977 to The Queen Elizabeth 11 Medical Centre (QEII) at the time of Her Majesty's visit.
At 2022, the former Perth Chest Hospital is a five storey building laid out in the form of an 'H' with two major wings facing north and south with an interconnecting link. The south face has yellow spandrels in the curtain walling and the north face has light blue panels. The main building has a reinforced concrete frame with salmon brick 'framing'. The metal-framed curtain walling has rendered framing and horizontal cantilevered cement-rendered sun screening. The link is brick faced with round windowed lift towers. This was once a prominent part of the eastern elevation but is now concealed from the streetscape. The roof plant on the north elevation is distinctively roofed with a reinforced concrete slab in the form of an extended sine curve with a filigree infilling. Extensive additions have been completed around the base of the building and to the south. The function of the building has been changed from ward accommodation to other purposes. The original form of the building is still visible and the prominent coloured north and south facades are still clearly evident.

WESTERN AUSTRALIAN HISTORIC THEME

AUSTRALIAN HISTORIC THEME

3. Developing Local, Regional and National Economies - 3.26 Providing health services
3. Developing Local, Regional and National Economies - 3.26.2 Providing hospital services

STATEMENT OF SIGNIFICANCE

It has aesthetic value for its modernist form, concrete sun awnings and strip windows, typical of the Post-War International Style.
It has high integrity for its continued use for health care since construction in 1958.
It has historical significance for charting the history and accommodation of a major public and teaching hospital in Perth from 1958 to the present day.
It represents changes in health care and practice in Western Australia.

NATURE OF SIGNIFICANCE

HERCON Value A - Its importance in demonstrating the evolution or pattern of Perth's history

It has high integrity for its continued use for health care since construction in 1958.
It has historical significance for charting the history and accommodation of a major public and teaching hospital in Perth from 1958 to the present day.

HERCON Value B - Its importance in demonstrating rare, uncommon or endangered aspects of Perth's heritage

HERCON Value C - Its potential to yield information that will contribute to an understanding of Perth's history

It represents changes in health care and practice in Western Australia.

HERCON Value D - Its importance in demonstrating the characteristics of a broader class of places

HERCON Value E - Any strong or special meaning it may have for any group or community because of social, cultural or spiritual associations

HERCON Value F - Its importance in exhibiting particular aesthetic characteristics valued by any group or community

It has aesthetic value for its modernist form, concrete sun awnings and strip windows, typical of the Post-War International Style.

HERCON Value G - Any special association it may have with the life or work of a person, group or organization of importance in Perth's history

HERCON Value H - Its importance in demonstrating a high degree of creative or technical achievement

HERCON Value I - Any HERCON Value I - Any other characteristic it may have that in the opinion of the decision making body is relevant

CONDITION AND AUTHENTICITY

Condition	Good
Building Fabric Authenticity	High

CLASSIFICATION OF SIGNIFICANCE

Some/moderate – Category 3 – Contributes to the heritage of the locality

HISTORY

Until the 1880's the town centre was characterised by the establishment of small cottages, shops and small businesses and was rural in character. The expansion of commerce following the discovery of gold in the 1890's put pressure on land in the centre of Perth with the result that most residential uses were displaced in favour of commercial development. During the 1890's and early 1900's the centre of Perth was substantially rebuilt. The period of expansion in Perth coincided with a period of economic depression in the eastern states, in particular Victoria. As a result, there was substantial migration from Victoria to WA. This migration included businessmen, architects and builders, all of whom had a considerable influence on the development of the city. Example of a commercial building constructed in Perth during the period of expansion and development that followed the gold rush of the 1890's. Hay Street was established along with St. George's Terrace and Murray Street, as one of the main streets of Perth from the time of settlement in 1829. It remained a major commercial street throughout the twentieth century and for most of that time was characterised by traffic, including trams. The character of the street changed after it became a mall in the 1970's.
It is unknown when the building was constructed, but the earliest newspaper record is in 1904 with advertisements placed by C J Keep. The building was bought by Norbert Keenan in 1909 from the WA Turf Club. It was still in his estate upon his death in 1954. By then he had been knighted and was a Queens Council.

Over time many different companies had occupied office space in the building. These include Vickery and Sons Agency in 1909, R C Sadleir Ltd in 1923, Guardian Insurance Co in 1928.Hubert Parker, solicitor set up an office in the building during the late 1930s. His firm was still located in the building in 1953 and was then known as Parker Byass and Schlam. Byass joined the firm in the 1940s. The Red Cross was located in the building during the 1940s.

HISTORY

Howard Street was originally a tramway, then private road to the river and was taken over by the Perth City Council as a public road in the late 1890s and early 1900s. In 1905 the building was constructed for solicitors Haynes, Robinson and Cox. The builder S. B. Alexander was also responsible for the Police Court Buildings. Haynes, Robinson and Cox were established in Albany in 1889. In 1897 they took over a Perth based practice Sholl and Foulkes with C. B. Cox and J C Foulkes. In 1903 this became Haynes, Robinson and Cox in 1903. The firm became Robinson, Cox and Wheatley and continued to work from the offices in the building into the early 1980s. The basement and ground floor tenants changed over time and including as a gold exchange in the 1930s which is when it was called Traders Building. Wyndham Freezing Canning and Meat Export Works owned the building during the late 1950s and into the 1960s and were located in the basement and ground floor. A residence was located on the second floor.

WESTERN AUSTRALIAN HISTORIC THEME

3. Developing Perth's (Local, Regional & National) Economies - 3.15 Developing economic links outside Australia
4. Building Perth (Settlements & Cities) - 4.1.4 Creating capital cities
8. Developing Perth's Cultural Life - 8.10.4 Designing and building fine buildings

STATEMENT OF SIGNIFICANCE

The place is exceptional as examples of the Federation Free and Federation Gothic styles.
The place is of aesthetic significance because it contributes to the visual quality of its location.
The interior of 20 Howard Street from the ground floor entrance, through to the main stair and including the whole of the first-floor interior is of a very high order of design and craftsmanship.
The place is significant in the development of commercial office buildings in the area of Howard Street and St. Georges Terrace in the latter years of the Gold Boom and the first decade of the twentieth century, and in the notable concentration of many of Perth's leading law firms in chambers in the Howard Street area from the early twentieth century.
The place has strong associations with the owners, the legal firm of Haynes Robinson and Cox. The firm's principal, Robert Thomson Robinson, was a public figure in Western Australia.
The place was designed by architect, Charles Oldham. Oldham carried out a number of commissions for Robinson, including buildings in Mount Lawley, when Robinson and his partner, Samuel Copley, developed the suburb.
The place has rarity value as 20 Howard Street is one of a small number of commercial buildings to have been built in the Federation Gothic style in Western Australia.

NATURE OF SIGNIFICANCE

HERCON Value A - Its importance in demonstrating the evolution or pattern of Perth's history

The place is significant in the development of commercial office buildings in the area of Howard Street and St. Georges Terrace in the latter years of the Gold Boom and the first decade of the twentieth century, and in the notable concentration of many of Perth's leading law firms in chambers in the Howard Street area from the early twentieth century.

HERCON Value B - Its importance in demonstrating rare, uncommon or endangered aspects of Perth's heritage

HISTORY

The building was constructed in 1905 as a legal chambers. Due to the location close to the Supreme Court and government offices there were many lawyers located in the area. Parker and Parker moved into the building shortly after it was built. Parker and Parker were originally located in William Street where they had commissioned the construction a building in 1884. They remained in the building until 1964. Since 1964 the building has been used as legal chambers.

AUSTRALIAN HISTORIC THEME

3. Developing Perth's (Local, Regional & National) Economies - 3.2 Constructing capital city economies
4. Building Perth (Settlements & Cities) - 4.1.4 Creating capital cities
8. Developing Perth's Cultural Life - 8.10.4 Designing and building fine buildings

STATEMENT OF SIGNIFICANCE

The place is a fine example of Federation Anglo-Dutch style, demonstrating a sound handling of materials, scale, detailing and decoration.
The place demonstrates the commercial expansion of central Perth, in particular the legal district, during the gold boom.
The place, together with the other buildings of Howard Street, strongly contributes to maintaining an increasingly rare example of turn of the century urban character of central Perth.
The place has a long and close association with Parker and Parker, an important and prestigious legal firm in Perth, which is of both historic and social significance.

NATURE OF SIGNIFICANCE

HERCON Value A - Its importance in demonstrating the evolution or pattern of Perth's history

The place demonstrates the commercial expansion of central Perth, in particular the legal district, during the gold boom.

HERCON Value B - Its importance in demonstrating rare, uncommon or endangered aspects of Perth's heritage

The place, together with the other buildings of Howard Street, strongly contributes to maintaining an increasingly rare example of turn of the century urban character of central Perth.

HERCON Value C - Its potential to yield information that will contribute to an understanding of Perth's history

HERCON Value D - Its importance in demonstrating the characteristics of a broader class of places

HERCON Value E - Any strong or special meaning it may have for any group or community because of social, cultural or spiritual associations

HERCON Value F - Its importance in exhibiting particular aesthetic characteristics valued by any group or community

The place is a fine example of Federation Anglo-Dutch style, demonstrating a sound handling of materials, scale, detailing and decoration.

HERCON Value G - Any special association it may have with the life or work of a person, group or organization of importance in Perth's history

The place has a long and close association with Parker and Parker, an important and prestigious legal firm in Perth, which is of both historic and social significance.

HERCON Value H - Its importance in demonstrating a high degree of creative or technical achievement

HERCON Value I - Any HERCON Value I - Any other characteristic it may have that in the opinion of the decision-making body is relevant

CONDITION AND AUTHENTICITY

Condition	Good
Building Fabric Authenticity	Medium level of authenticity as it is largely as originally constructed with detail intact.

CLASSIFICATION OF SIGNIFICANCE

Exceptional – Category 1 - Essential to the heritage of the locality. Rare or outstanding example.

Physical Description	

Hackett Hall is part of complex of Western Australian Museum buildings located at the northeast quadrant of the Perth Cultural Centre Precinct site and is located to the west of the earlier Jubilee Building (1896-97) which addresses the corner of Beaufort Street and the James Street pedestrian walkway. Hackett Hall is a two-storey, red face brick building designed in the Federation Romanesque style. Originally intended to be an integral part of the master plan for the site, Hackett Hall deviates significantly from the original scheme for the complex. This was to have been a central building linking Hackett Hall to the Jubilee building. It was not until 1999 that the link building was constructed. The new entrance between the Jubilee building and Hackett Hall achieves the resolution of an historic problem created by the differing design philosophies. Hackett Hall is 10 metres out of alignment with the Jubilee Building. Only the 1910, Hillson Beasley designed south wing of Hackett Hall remains. This building uses similar materials and design style to blend with the Eastern Wing building. The external materials include red face brick walls with Donnybrook stone decorative elements. There is a plinth of rusticated granite.

Architect	Hillson Beasley
Builder	
Other Associations	Sir John Winthrop Hackett - Other (library chairman)

HISTORY

The foundation stone for the Victoria Public Library, established to celebrate the Golden Jubilee of Queen Victoria's reign, was laid in St George's Terrace in 1887. After being housed in temporary accommodation, the library moved to the Jubilee Building on the corner of Beaufort and James streets in 1897 which then housed the Library, Museum and Art Gallery. Additional library accommodation was constructed in 1903 and a further wing, Hackett Hall was added to the State Library in 1913. Designed by Government Architect, Hillson Beasley, Hackett Hall adopted a similar style and construction materials to the earlier Jubilee Building, but demonstrated a different alignment and was left unfinished at the eastern end.
The first chief librarian, Dr James Sykes Battye was granted administrative control of the library, museum and art gallery. This system continued until 1955, a year after his death, when the library administration was separated from the museum and art gallery.
In 1977 planning began to bring the Library Boards branches and collections which were then scattered over three main buildings and three annexes into a single building. The new Alexander Library Building opened in 1985 and Hackett Hall became part of the Museum Complex. The 1903 library wing north of Hackett Hall had been demolished in 1984.
In 1999 completion of a new entrance building linked Hackett Hall with the Western Australian Museum - Eastern Wing, resolving the issue of the different alignments.

WESTERN AUSTRALIAN HISTORIC THEME

4. Social and civic activities - 402 Education and science

AUSTRALIAN HISTORIC THEME

6. Educating - 6.1 Forming associations, libraries and institutes for self-education

STATEMENT OF SIGNIFICANCE

The place is a fine example of the Federation Free style and is an integral component of the wider Perth Cultural Centre precinct which comprises excellent examples of structures from a diverse range of architectural styles.
The place is associated with the expansion of the state under the influences of the Gold Boom and the government's commitment to providing public cultural institutions.
The place is strongly associated with government architect, Hillson Beasley.
The longstanding contribution of Hackett Hall as a significant cultural institution and fine architectural expression, contributes to the community's sense of place.
The place together with the other elements of the Western Australian Museum complex is rare in Australia for displaying a non-traditional free style of architecture in a time period when classical themes were typically chosen to symbolise the cultural values of civic and cultural institutions.
The roof lanterns at Hackett Hall (and the Art Gallery) may be the only surviving lanterns of this size in Western Australia.
The place is a representative example of the important public works projects undertaken in the Federation period.

NATURE OF SIGNIFICANCE

HERCON Value A - Its importance in demonstrating the evolution or pattern of Perth's history

PHYSICAL DESCRIPTION

Architectural Style 1 General	Victorian (c.1840-c.1890)
Architectural Style 1 Specific	Georgian
Architectural Style 2 General	
Architectural Style 2 Specific	
Archaeology	
Physical Description	

Old Court House & Gaol is a small component in the larger collective referred to as the Western Australian Museum Complex, of the Perth Cultural Centre. Located within a central courtyard of the complex, the building no longer has a street frontage due to surrounding development. The Victorian Georgian style Old Court House & Gaol has a basement and three levels above ground level constructed with Rocky Bay Tamala limestone walls, and fibre-cement slate roof cladding. The roof originally had sheoak shingles which were replaced with galvanised corrugated iron and then fibre-cement.
The remaining parts of the Old Court House & Gaol are primarily the product of the vision of the long serving and influential colonial architect Richard Roach Jewell. The main entry to the building is in the eastern face and although extensively restored, is largely authentic fabric from the original construction and is a fine composition. The front doors are surmounted by a stone transom and fanlight with a stone voussoir arch and raised keystone arch. The entry is flanked by arched-head casement windows with stone voussoirs over.

HISTORY

Old Court House & Gaol was designed by architect Richard Roach Jewell, Clerk of Works for the Colonial Establishment but only the first stages of his ambitious cruciform plan were completed. The reduced Gaol and a Courthouse, the latter incorporated into the plan during construction, were completed in 1856. The court room function was transferred back to the original court building in the Supreme Court Gardens in 1863 and the building served as a gaol until 1888 when it was closed.
Thereafter Old Court House & Gaol became a Geological Museum and then The Perth Museum. It was enlarged in 1895 with the building of a Zoological Wing requiring the demolition of the cells and marking the start of subsequent fabric losses. From 1899 Old Perth Gaol was surrounded by purpose built library, museum and art gallery buildings and deteriorated through lack of interest and government support until the early 1960's when an interest began to be taken in Western Australia's architectural history. It was partially adapted and conserved in the 1960's and became a museum of Western Australian history in the mid 1970's.

WESTERN AUSTRALIAN HISTORIC THEME

1. Demographic settlement and mobility - 106 Workers (including Aboriginal, convict)
4. Social and civic activities - 403 Law and order

AUSTRALIAN HISTORIC THEME

2. Peopling Australia - 2.3 Coming to Australia as a punishment
4. Building Settlements, Town and Cities - 4.3 Developing Institutions

STATEMENT OF SIGNIFICANCE

The place is a fine example of the Victorian Georgian style of architecture adopting classical elements and proportions and presenting a strong image of colonial prison architecture.
The place has historic significance for its functions as a colonial prison and its later function as the nucleus of the Western Australian Museum.
The place has some capacity to contribute to the wider understanding of mid nineteenth century law and order.
The place is a reminder of the early convict period and is an important component of the Perth Cultural Centre.
Its fine aesthetic qualities contribute to the community's sense of place.
The place is one of a very small number of secular buildings to have survived from the 1850's and is a rare example of a Victorian Georgian style structure in Perth that has not acquired accretions or other climatic modifications such as verandahs.
The place is representative of mid-nineteenth century prison architecture.

NATURE OF SIGNIFICANCE

HERCON Value A - Its importance in demonstrating the evolution or pattern of Perth's history

The place has historic significance for its functions as a colonial prison and its later function as the nucleus of the Western Australian Museum.

HERCON Value B - Its importance in demonstrating rare, uncommon or endangered aspects of Perth's heritage

The place is one of a very small number of secular buildings to have survived from the 1850's and is a rare example of a Victorian Georgian style structure in Perth that has not acquired accretions or other climatic modifications such as verandahs.

HERCON Value C - Its potential to yield information that will contribute to an understanding of Perth's history

The place has some capacity to contribute to the wider understanding of mid nineteenth century law and order.

HERCON Value D - Its importance in demonstrating the characteristics of a broader class of places

The place is representative of mid-nineteenth century prison architecture.

HERCON Value E - Any strong or special meaning it may have for any group or community because of social, cultural or spiritual associations

The place is a reminder of the early convict period and is an important component of the Perth Cultural Centre. Its fine aesthetic qualities contribute to the community's sense of place.

HERCON Value F - Its importance in exhibiting particular aesthetic characteristics valued by any group or community

The place is a fine example of the Victorian Georgian style of architecture adopting classical elements and proportions and presenting a strong image of colonial prison architecture.

Architectural Style 1 Specific	Romanesque
Architectural Style 2 General	
Architectural Style 2 Specific	
Archaeology	
Physical Description	

Art Gallery (fmr) is a component of the Eastern Wing of the Western Australian Museum Complex in the Perth Cultural Centre which also comprises the 'Jubilee Wing' and the former Government Geologists Office. This group of adjoining buildings built in three main phases of construction comprises a group of turn of the century Gold Boom buildings with some minor modern structures. The buildings are all parts of unfinished master plans of the 1890's and 1910's.
Jubilee Building is located on the corner of Beaufort Street and the James Street pedestrian walkway. Government Geologists Office is located on the corner of Beaufort Street and Francis Street and 'Art Gallery (fmr) is located between the two along Beaufort Street. These buildings partly surround Old Court House & Gaol to the south and east.
Art Gallery (fmr) is a three storey brick, stone and terracotta building showing influences of the Federation Gothic style and incorporating many elements of the Federation Romanesque style. The exterior fabric of Art Gallery (fmr) is largely intact apart from changes to the Beaufort Street entrance screen and some alterations to the western or rear elevation.
The ground floor windows are grouped together by arcading which uses Meckering granite. The arch infills are decorated with embossed terracotta tiles. A cement enriched frieze runs along the level of the main eaves. Lighting for the first floor is by means of a lantern gallery, this being considered at the time as the best lighting for viewing pictures. The ground floor windows were considered to provide the best lighting for sculptures. The building was originally roofed with slates but these have now been replaced by clay tiles. A frieze which runs around the walls of the first floor gallery is a plaster cast of the Parthenon's friezes (the Elgin Marbles). This gallery also features the magnificent lantern which is supported by a series of timber arcades.

Walls 1 Material	Brick

Builder	
Other Associations	

HISTORY

Construction work on Art Gallery (fmr) commenced in 1907 interconnecting with the earlier components of the Eastern Wing of the Western Australian Museum Complex (Jubilee Building to the south and Former Geologist's Office to the north. When it opened in 1908 Art Gallery (fmr) accommodated a sculpture gallery on the ground floor and a painting gallery lit by a clerestory on the first floor. Plans for the building were prepared by Chief Architect Hillson Beasley who had succeeded George Temple Poole and John Grainger at the Public Works Department. The economic conditions resulting from the mineral boom of the 1970's and the impetus provided by the State's impending Sesquicentenary in 1979 made construction of a new building for the Art Gallery of Western Australia possible. In 1979 staff moved to the new Main Gallery Building located on Roe Street, next to the Police Courts which were integrated into the gallery complex in 1995.

WESTERN AUSTRALIAN HISTORIC THEME

4. Social and civic activities - 402 Education and science

AUSTRALIAN HISTORIC THEME

6. Educating - 6.1 Forming associations, libraries and institutes for self-education

STATEMENT OF SIGNIFICANCE

The place is a fine example of the Federation Romanesque style of architecture and makes use of Federation Gothic elements in connection with entries.
The place is associated with the expansion of the state under the influences of the Gold boom and the government's commitment to providing public cultural institutions.
The place is closely associated with many individuals who have played an important part in the history and development of the State including the architects, and museum and art gallery curators.
The place influenced the development and application of the arts and crafts in Western Australia. The building demonstrates curatorial practices typical of the late nineteenth and early twentieth centuries.
The longstanding contribution of Art Gallery (fmr) as a significant cultural institution and fine architectural expression, contributes to the community's sense of place.
The place is a rare example of late nineteenth and early twentieth century notions of displaying sculpture and painting making maximum use of natural light and ventilation. The practice has been replaced by the need to accommodate collections in artificially controlled environments. Art Gallery (fmr) together with the other elements of the Western Australian Museum complex is rare in Australia for displaying a non-traditional free style of architecture in a time period when classical themes were typically chosen to symbolise the cultural values of civic and cultural institutions.
The place is a representative example of the important public works projects undertaken in the Federation period.

Architectural Style 2 Specific	
Archaeology	
Physical Description	

WA Museum Entrance Building structure linking Hackett Hall to the Jubilee Building includes a five level service core in the north-east corner of Hackett Hall, was a five metre high transparent linking structure and below ground exhibition gallery. The new entrance building is a transparent structure to avoid comprising the integrity of the existing buildings and to permit a clear view to be maintained to the south elevation of the Old Gaol. It provided access through the Museum and creates a new entry in a way that is not dominant over the two adjoining significant historic buildings (Hackett Hall and the Jubilee Building). This building was demolished in 2017 as part of the Museum redevelopment and is now an open space under the new building.

Walls 1 Material	Glass
Walls 2 Material	
Roof Material	Metal - Corrugated Iron
Architect	Cox Howlett Bailey Woodland
Builder	
Other Associations	

HISTORY

The creation of the new entrance building fulfills the vision of George Temple Poole, Chief Architect of the Public Works Department, who presided over the master planning for the site in the 1890's. His designs included the construction of a grand entrance fronting James Street on the site of the new entrance building. The new structure, completed in 1999, resolves a historic problem created by the two different master plans and alignments for the site by Temple Poole and Hillson Beasley.

Physical Description	

Art Gallery (fmr) is a component of the Eastern Wing of the Western Australian Museum Complex in the Perth Cultural Centre which also comprises the 'Jubilee Wing' and the former Government Geologists Office. This group of adjoining buildings built in three main phases of construction comprises a group of turn of the century Gold Boom buildings with some minor modern structures. The buildings are all parts of unfinished master plans of the 1890's and 1910's.
Jubilee Building is located on the corner of Beaufort Street and the James Street pedestrian walkway. Government Geologists Office is located on the corner of Beaufort Street and Francis Street and 'Art Gallery (fmr) is located between the two along Beaufort Street. These buildings partly surround Old Court House & Gaol to the south and east.
Art Gallery (fmr) is a three-storey brick, stone and terracotta building showing influences of the Federation Gothic style and incorporating many elements of the Federation Romanesque style. The exterior fabric of Art Gallery (fmr) is largely intact apart from changes to the Beaufort Street entrance screen and some alterations to the western or rear elevation.
The ground floor windows are grouped together by arcading which uses Meckering granite. The arch infills are decorated with embossed terracotta tiles. A cement enriched frieze runs along the level of the main eaves. Lighting for the first floor is by means of a lantern gallery, this being considered at the time as the best lighting for viewing pictures. The ground floor windows were considered to provide the best lighting for sculptures. The building was originally roofed with slates, but these have now been replaced by clay tiles. A frieze which runs around the walls of the first-floor gallery is a plaster cast of the Parthenon's friezes (the Elgin Marbles). This gallery also features the magnificent lantern which is supported by a series of timber arcades.

HISTORY

Construction work on Art Gallery (fmr) commenced in 1907 interconnecting with the earlier components of the Eastern Wing of the Western Australian Museum Complex (Jubilee Building to the south and Former Geologist's Office to the north. When it opened in 1908 Art Gallery (fmr) accommodated a sculpture gallery on the ground floor and a painting gallery lit by a clerestory on the first floor. Plans for the building were prepared by Chief Architect Hillson Beasley who had succeeded George Temple Poole and John Grainger at the Public Works Department.
The economic conditions resulting from the mineral boom of the 1970's and the impetus provided by the State's impending Sesquicentenary in 1979 made construction of a new building for the Art Gallery of Western Australia possible. In 1979 staff moved to the new Main Gallery Building located on Roe Street, next to the Police Courts which were integrated into the gallery complex in 1995.

WESTERN AUSTRALIAN HISTORIC THEME

3. Occupations - 307 Intellectual activities, arts and crafts
4. Social and civic activities - 402 Education and science

AUSTRALIAN HISTORIC THEME

6. Educating - 6.1 Forming associations, libraries and institutes for self-education
8. Developing Australia's Cultural Life - 8.10 Pursuing excellence in the arts and sciences

STATEMENT OF SIGNIFICANCE

The place is a fine example of the Federation Romanesque style of architecture.
The place is associated with the expansion of the State under the influences of the Gold boom and the Government's commitment to providing public cultural institutions.
The place is closely associated with many individuals who have played an important part in the history and development of the State including the architects, and museum and art gallery curators.
The longstanding contribution of Government Geologist's Office as a significant cultural institution and fine architectural expression, contributes to the community's sense of place.
The place, together with other elements of the Western Australian Museum complex is rare in Australia for displaying a non-traditional free style of architecture in a time period when classical themes were typically chosen to symbolise the cultural values of civic and cultural institutions.
The place is a representative example of the important public works projects undertaken in the Federation period.

NATURE OF SIGNIFICANCE

HERCON Value A - Its importance in demonstrating the evolution or pattern of Perth's history

The place is associated with the expansion of the State under the influences of the Gold boom and the Government's commitment to providing public cultural institutions.

HERCON Value B - Its importance in demonstrating rare, uncommon or endangered aspects of Perth's heritage

The place, together with other elements of the Western Australian Museum complex is rare in Australia for displaying a non-traditional free style of architecture in a time period when classical themes were typically chosen to symbolise the cultural values of civic and cultural institutions.

HERCON Value C - Its potential to yield information that will contribute to an understanding of Perth's history

HERCON Value D - Its importance in demonstrating the characteristics of a broader class of places

The place is a representative example of the important public works projects undertaken in the Federation period.

These buildings partly surround Old Court House & Gaol to the south and east. Jubilee Building is a three-storey brick, stone and terracotta tile building in the Federation Romanesque style of architecture. Jubilee Building remains little changed from the time of is construction. The external elevations with rusticated pediments, stone arches and brick infill panels remain intact and the open piazza remains infilled with glazed panels. Some of the detail of the roofscape has been lost as a result of the process of installing replacement roofing materials on two occasions whereby gambrels and other small details were removed. The remainder of the external fabric is intact.

HISTORY

Jubilee Building was conceived to accommodate the Library and part of the State's museum collection and be timed to coincide with Queen Victoria's Diamond Jubilee. The building was to be the first stage of an ambitious plan conceived by Government Architect George Temple Poole and later modified by his successor, John Grainger. Only the foundation stone had been laid when the Queen's Jubilee was celebrated in June 1897 and the Victoria Public Library moved into the partially completed building later that year, although the building was not declared opened until 1899. Acting Chief Architect, Hillson Beasley finalised plans for other components of the library, museum and art gallery complex with the Government Geologist's Office completed in 1903 and the Art Gallery, designed in the Romanesque style to harmonise with Jubilee Building, opening in 1908.
The first section of the new Victoria Public Library opened and the library vacated the Jubilee Building in 1903. A new State Library (Hackett Hall) was completed as an addition to the Victoria Library in 1913, again adopting a similar style and building palette but demonstrating a different alignment to Jubilee Building. The two buildings were eventually connected by the creation of the new WA Museum Entrance Building in 1999.

Physical Description	

Art Gallery Administration Building (the former Police Barracks) is a two storey classically planned Donnybrook sandstone wall and tiled roof building in the Federation Romanesque style.
The building faces the James Street pedestrian walkway and is to the north of the Main Gallery Building. There is an enclosed link between the two buildings. There is a stone and cast-iron fence to the front of the building.
The front façade is symmetrical in design and is of Donnybrook stone cut in a pillow profile. The front of the building has three, two storey pavilion blocks linked by a single storey arcade.
Generally much of the external fabric and detailing remains with the exception of the south elevation which was modified in the 1976 adaptation works. The roof finish has also been altered from slate to clay tiles.

HISTORY

Art Gallery Administration Building was built as Police Barracks for the adjacent Perth Court of Petty Sessions and completed in 1905. The need for such a building and the means to build it arose from the Gold Boom, and the population growth and wealth it generated.
The building was designed by Public Works Department Architect, Hillson Beasley who succeeded John Grainger as Chief Architect of the Public Works Department and completed a prodigious number of building designs in Western Australia in his time as assistant and later chief architect at the Public Works Department.
In 1952 the Police Barracks were converted into offices for an expanded Police Force, particularly to accommodate the new Criminal Investigation Bureau (CIB). The Commissioner of Police, detectives and support staff moved into the converted Quarters, freeing up space for magistrates and staff in the Police Quarters. When the police moved to new headquarters near the causeway in 1975 the former barracks were converted for use for Art Gallery administration staff who moved in the following year.
The building now houses the offices of the Art Gallery Administration and contains offices, laboratories, educational facilities, theatrette and boardrooms. Substantial internal alterations to allow for the special requirements have been carefully carried out, but the external appearance of the building remains mostly unchanged.
A statue that once stood in front of the building as a memorial to two policeman who were murdered in Kalgoorlie in 1926 has been relocated to East Perth.

WESTERN AUSTRALIAN HISTORIC THEME

1. Demographic settlement and mobility - 108 Government Policy
1. Demographic settlement and mobility - 111 Depression and boom

4. Building Perth (Settlements & Cities) - 4.6 Remembering significant phases in the development of Perth
7. Governing Perth - 7.6.3 Policing Perth (Australia)
8. Developing (Perth) Australia's Cultural Life - 8.10 Pursuing excellence in the arts and sciences
8. Developing (Perth) Australia's Cultural Life - 8.10.4 Designing and building fine buildings

STATEMENT OF SIGNIFICANCE

The place is a fine example of the Federation Romanesque style of architecture and contributes to the wider environment of the Perth Cultural Centre Precinct which comprises excellent examples of structures from a diverse range of architectural styles.
The place demonstrates the broad and eclectic skills of PWD architect, Hillson Beasley.
Its construction is associated with the wealth generated in Western Australia as a consequence of the 1890s Gold Boom.
The place together with Perth Court of Petty Sessions, Art Gallery Administration Building demonstrates an early use of Donnybrook Stone and has capacity to teach about aspects of the stone's durability and repair.
The place has become a component of a significant cultural institution which together with its fine architectural expression and longstanding prominence contribute to the community's sense of place.
The place has some rarity value as one of a small number of police quarters built in Western Australia where police constables lived in barrack style accommodation.
The place is representative of the important public works projects undertaken in the late 1890's and early 1900's.

Physical Description	

State Library of Western Australia is located on the north-west quadrant of the Perth Cultural Centre Heritage Precinct. The building has bands of precast concrete panels with alternating bands of glazing. There are large ‘blade’ walls dividing sections of the building. The concrete and glazing band widths vary in each section. In one section each floor steps back from the one beneath.
The main entrance to the building is from the James Street pedestrian walkway at the concourse level, with a secondary entrance from Francis Street. The axis of the building, as with the main Gallery Building of the Art Gallery, is set at a 45-degree angle to the street grid.
There is a two-level carpark located beneath the library building. The carpark is accessed by three lifts located externally on the north, south and west faces of the main building.

HISTORY

The foundation stone for the Victoria Public Library, established to celebrate the Golden Jubilee of Queen Victoria’s reign, was laid in St George’s Terrace in 1887. After being housed in temporary accommodation, the library moved to the Jubilee Building on the corner of Beaufort and James streets in 1897 which then housed the Library, Museum and Art Gallery. Additional library accommodation was constructed in 1903 and a further wing, Hackett Hall was added to form the State Library in 1913. The first chief librarian, Dr James Sykes Battye was instrumental in establishing a collection of state records and an archives branch was founded in 1945. The

archives branch of the State Library of Western Australia is named the Battye Library. The State Records Office is currently located within the State Library of Western Australia and occupies approximately 10% of the total footprint of the building.
In 1977 planning began to bring the Library Board's branches and collections, which were then scattered over three main buildings and three annexes, into a single building. The new six storey building designed by architects Cameron Chisholm and Nicol, in association with the Building Management Authority, was opened in June 1985 as the Alexander Library Building in celebration of Professor Fred Alexander, CBE, Fellow of the Library Board of Western Australia.
The archival collections of the State Library of Western Australia were separated in 2001 following the passing of the State Records Act. Government Records went to the newly created State Records Office and the private archives and manuscripts remained with the Library as part of the J.S. Battye collections. The State Records Office continues to be housed in the State Library Building with a separate entrance at the western end of the Cultural Centre frontage.

Physical Description	

PICA & Arts House are located on the south-west corner of the Perth Cultural Centre Precinct site. PICA, the former Perth Boys' School (1897), is a two-storey red brick and corrugated iron former school building in the Federation Free Classical style and currently accommodates The Perth Institute of Contemporary Arts (PICA). Arts House, the former Monitors' School (1905, 1914) is a separate two-storey red brick structure to the west of PICA but has a more utilitarian style expression and provides accommodation for The Blue Room theatre.
PICA is located in the former Perth Boys' School Building. This building was designed to be seen in the round and is of the Federation Free Classical Style. It displays prominent external decorative elements, with much of the original detailing remaining. The building has red face brick walls set on a stone plinth. There are decorative elements to the entry porches, windows and eaves. The building has a corrugated iron hipped roof with raised sections over the central gallery spaces and a prominent tower element in the James Street facade.
Arts House is located in the former 1905/1914 Monitors' School. Former elements comprising the 1898 Manual Training Room, and 1906 Cookery and Laundry Centre were demolished c. 2006. This remaining structure has a rectangular form with bands of white render contrasting against the red brickwork and a gabled corrugated iron roof. A rendered masonry and glazed annexe has been constructed on the east side of the building in recent years providing a new entrance foyer and access to the upper storey.

HISTORY

Perth Girls' and Infants' School was built on Lots Y19 and Y20 to a design by Richard Roach Jewell in 1877. In 1897 the contract to house a new Perth Boys' School and Perth Girls' School in James Street was awarded. In June 1905 the first purpose built Monitors' School in the state, for students who wished to sit the secondary school examination and simultaneously to become teachers, was opened in a building immediately to the west of the Perth Boys' and Girls' School building. Various auxiliary manual and household training buildings were grouped around the Monitors School.
Over the next half century the group of buildings, known collectively as Perth Central School was adapted and added to in line with changes in education policy and the development of other facilities such as Perth Modern School in Subiaco and a new Perth Girls School in East Perth. The Perth Technical College moved into the buildings in 1958 and in the following decade the concept of establishing a Cultural Centre within the precinct was developed. TAFE (formerly Perth Technical College) vacated the former Central School buildings in 1988 which were refurbished for occupation by PICA and officially opened on 8 November 1991. The former Monitors School, Household Management Centre and Manual Training School buildings collectively formed 'Arts House'. The Monitors School has been retained, but other components have been demolished in the redevelopment of the site for the State Theatre Centre at the corner of Roe and William Streets.

8. Developing (Perth) Australia's Cultural Life - 8.10.4 Designing and building fine buildings

STATEMENT OF SIGNIFICANCE

The place is a fine example of their styles of architecture. PICA in particular has landmark qualities due to its architectural detailing and prominent tower element.
The place was constructed as part of the Perth Central School, the first central school in Western Australia, the philosophy of which was to provide a complete educational facility, with opportunities for post-primary education.
The construction of the Boys' School was the largest project undertaken for the Education Department in the 1890's.
The place has archaeological research potential in, around and under PICA & Arts House.
Through its use as an educational facility over a period of ninety years, PICA & Arts House have significant associative value for the thousands of people who have studied there. More recently, the place is valued for its associations with the local contemporary art scene.
The place is the only remaining elements of the Perth Central School, an unusually large school complex in the early 1900's.
The place is representative of the shift in educational policy at the turn of the twentieth century.

NATURE OF SIGNIFICANCE

HERCON Value A - Its importance in demonstrating the evolution or pattern of Perth's history

The place was constructed as part of the Perth Central School, the first central school in Western Australia, the philosophy of which was to provide a complete educational facility, with opportunities for post-primary education. The construction of the Boys' School was the largest project undertaken for the Education Department in the 1890's.

HERCON Value B - Its importance in demonstrating rare, uncommon or endangered aspects of Perth's heritage

The place is the only remaining elements of the Perth Central School, an unusually large school complex in the early 1900's.

HERCON Value C - Its potential to yield information that will contribute to an understanding of Perth's history

The place has archaeological research potential in, around and under PICA & Arts House.

HERCON Value D - Its importance in demonstrating the characteristics of a broader class of places

The place is representative of the shift in educational policy at the turn of the twentieth century.

HERCON Value E - Any strong or special meaning it may have for any group or community because of social, cultural or spiritual associations

HERCON Value F - Its importance in exhibiting particular aesthetic characteristics valued by any group or community

The place is a fine example of their styles of architecture. PICA in particular has landmark qualities due to its architectural detailing and prominent tower element.

HERCON Value G - Any special association it may have with the life or work of a person, group or organization of importance in Perth's history

Through its use as an educational facility over a period of ninety years, PICA & Arts House have significant associative value for the thousands of people who have studied there. More recently, the place is valued for its associations with the local contemporary art scene.

HERCON Value H - Its importance in demonstrating a high degree of creative or technical achievement

HERCON Value I - Any HERCON Value I - Any other characteristic it may have that in the opinion of the decision-making body is relevant

CONDITION AND AUTHENTICITY

Condition	Fair
Building Fabric Authenticity	Medium level of authenticity.

CLASSIFICATION OF SIGNIFICANCE

Exceptional – Category 1 - Essential to the heritage of the locality. Rare or outstanding example.

Physical Description	

Perth Court of Petty Sessions is a classically planned, two storey, Donnybrook stone walled and tiled roof building designed in the Federation Second Empire style. The front façade of the building faces Beaufort Street. It consists of three protruding bays linked by recessed elements of the same height and style. The central bay has a clock built into the stone pediment.
With the exception of the roof, which has seen the replacement of the slate with tiles and the removal of most decorative elements, the building and its details remains largely intact. Two enclosed links have been constructed to the rear and link to Main Gallery Building.

HISTORY

Perth Court of Petty Sessions was built as Police Courts in 1904-05 for Police, Local and Coroners' Courts, with supporting accommodation on the ground floor, and office and administrative accommodation for the Commissioner of Police, his staff and records on the first floor. The need for such a building and the means to build it arose from the Gold Boom, and the population growth and wealth it generated.

The Police Courts building was designed by Hillson Beasley, who completed a prodigious number of building designs in Western Australia in his time as assistant and later chief architect at the Public Works Department. The building performed its intended function until 1951 and the court functions progressively took over the whole of the building. Wealth generated through the mineral boom in the 1970's provided the impetus for planning of a new art gallery which would include Perth Court of Petty Sessions.
The Police Courts remained in use until 1982 and then became available to the Art Gallery of Western Australia. Conservation and adaptation work was carried out in stages and completed in 1995.

WESTERN AUSTRALIAN HISTORIC THEME

4. Social & civic facilities - 403 Law & order
4. Social & civic facilities - 407 Cultural activities

AUSTRALIAN HISTORIC THEME

3. Developing Local, Regional and National Economies - 3.14.2 Using Australian materials in construction

8. Developing Perth's Cultural Life - 8.10 Pursuing excellence in the arts & sciences
8. Developing Perth's Cultural Life - 8.10.4 Designing and building fine buildings

STATEMENT OF SIGNIFICANCE

The place is a fine example of the Federation Second Empire style of architecture and contributes to the wider environment of the Perth Cultural Centre Precinct which comprises excellent examples of structures from a diverse range of architectural styles.
The place was one of the PWD's finest creative achievements and is a demonstration of the broad and eclectic skills of Hillson Beasley.
Together with the Art Gallery Administration Building (the former Police Barracks), Perth Court of Petty Sessions demonstrates an early use of Donnybrook Stone and has capacity to teach about aspects of the stone's durability and repair.
The place is an important element in the evolution of court building in Western Australia. More recently the place has become a component of a significant cultural institution which together with its fine architectural expression and longstanding prominence contribute to the community's sense of place.
The place is one of only two buildings designed in Western Australian in the Federation Second Empire style.
The place is representative of the important public works projects undertaken in the late 1890's and early 1900's.

Architectural Style 1 Specific	Brutalist
Architectural Style 2 General	
Architectural Style 2 Specific	
Archaeology	
Physical Description	

Main Gallery Building (1979) is a five storey Late Twentieth-Century Brutalist style concrete-framed building clad with concrete blocks and with a space frame awning. The building faces the pedestrian walkway running from the Perth Railway Station to the Alexander Library. From this walkway (at the concourse level) the building reads as three levels in height. The fourth lower level is located below the paved concourse area and is at street level at Roe Street. The concourse level of the Art Gallery contains several hexagonal gallery spaces, an internal assembly area, service areas, bookshop, main foyer and café. The café is accessible from the pedestrian walkway. The floor above provides a large overhang over the front entrance to the Art Gallery. Main Gallery Building has linking buildings to both the Centenary Galleries and the Administration Building. The majority of the original fabric remains with minor alterations such as the extension of the cafe, new main doors and the interlinking building to the Centenary Galleries. In 2011, the installation of twin canopy additions was intended to replace the entry area to the Art Gallery and renovation works to the front façade were undertaken for maintenance.

HISTORY

Main Gallery Building was built to replace its predecessor in Beaufort Street, which was part of the historic museum, art gallery and library complex, and marks the second mineral boom and the maturing of the State and its cultural institutions.
The construction of Main Gallery Building from 1977 was made possible by improved economic conditions resulting from the mineral boom of the 1970s and the impetus provided by the State's impending Sesquicentenary in 1979. The Alexander Library, also part of the Perth Cultural Centre, was commenced in the same year.

Architectural Style 2 Specific	
Archaeology	
Physical Description	

Relocated from 70 Roe Street, Roe Street Cottage is a single storey face brick and shingle dwelling in the Victorian Georgian style. This simple building is residential in nature. Roe Street Cottage is located behind the Francis Street building in the courtyard surrounding Old Perth Gaol. It is located to the west of the building. The front elevation of the building is symmetrical with a central front door and a double hung window either side. There is a verandah under a broken back roof with simple square timber posts. The polychromatic brickwork is laid in Flemish bond. Due to its relocation, the structure may be regarded as a display rather than an integral element of the Western Australian Museum site.

Other Associations	

HISTORY

Roe Street Cottage was re-erected on the Western Australian Museum site and officially opened by the Mayor of the City of Perth in March 1993. Constructed c.1863 at 70 Roe Street, the building described as a four-room cottage in City of Perth rate books in 1879, was dismantled c. 1986 and the material donated to the City of Perth. The Museum offered to have the building re-erected on its Perth site. The work was undertaken by a

youth employment scheme as part of the museum's 100th anniversary celebrations. The reconstruction involved the introduction of significant amounts of new material. The house is reputed to have been one of the last Roe Street brothels and was used for a scrap metal yard before being re-sited within the grounds of the Western Australian Museum.

HISTORY

The area to the north of Perth (now known as Northbridge) was valued by the Whadjuk Nyoongar for its low lying and swampy lakes system, which provided abundant resources. After colonisation, this land was not settled as quickly as drier areas on the ridge of Perth. In 1854 some of the swampy land to the north of Perth was drained producing fertile land for farming. As the population grew during the convict era of the 1850s the land was subdivided into allotments circa 1860 and taken up by discharged soldiers, artisans and small landholders. The area at this period was characterised by small cottages and businesses.
In 1881 the railway from Fremantle to Guildford was opened and became the main transport route. From that period commerce and trade tended to focus on smaller commercial enterprises and manufacturing to the north. It was less fashionable to live north of the railway line, however the area was close to the city and during the 1890s and early 1900s was substantially redeveloped with further subdivision of lots and mixed residential and commercial development. This was an immediate response to the tripling of the State's population in the recent decade due to the gold boom, and a pressing demand for affordable accommodation.
A number of trade and community organisations had their origins in the area at this time. Over the years the population of the area changed as people relocated to suburban areas of the city. As a result, Northbridge became the home for successive migrant communities. for example, communities including Greek, Italian, Chinese and more recently Vietnamese migrants have settled here as property remained relatively cheap and had the advantage of being close to the city. These communities have over the years given this area a distinctive character, generally recycling the existing buildings rather than redeveloping the area. Northbridge,

named because it is just north of Perth across the railway bridge, was approved as a suburb name in 1982. Commercial Building, 77-81 James Street is a two-storey development with four strata titles. The Metropolitan Water Supply Survey plan dated 1949 (Cons 4156/64 State Records Office of WA) shows a row of four identical attached brick houses (Nos. 79, 81, 83 and 85) with front and rear verandahs. These were demolished in the early 1960s, and the present property was built between 1966 and 1970, according to aerial photographs.

HISTORY

The area to the north of Perth (now known as Northbridge) was valued by the Whadjuk Nyoongar for its low lying and swampy lakes system, which provided abundant resources. After colonisation, this land was not settled as quickly as drier areas on the ridge of Perth. In 1854 some of the swampy land to the north of Perth was drained producing fertile land for farming. As the population grew during the convict era of the 1850s the land was subdivided into allotments circa 1860 and taken up by discharged soldiers, artisans and small landholders. The area at this period was characterised by small cottages and businesses.

HISTORY

The building was constructed in 1911 and was designed by architects Wright, Powell and Cameron. Chinese men were recruited to work as labourers, pearlers, gardeners prior to convicts arriving in the colony. There was opposition to the Chinese workers being present in the colony and the government restricted their entry to Australia under the 'White Australia policy' which was passed in the first session of the Australian parliament in 1901. Chinese people who stayed in Western Australia formed community groups and shops which imported goods, and provided facilities such as banking and postal services. Laundries and furniture factories run by Chinese people were subject to restrictions by the government so competition was reduced. The Chung Wah Association was formed in 1909 to represent the Chinese community and to stand against the restrictions placed on them. The site was located in the middle of Chinese businesses in Northbridge. The building became a place where people could socialise, it held a library and education area. Financial assistance was provided for people to return to China. Many people returned during the 1930s to the 1950s. After immigration laws changed, an increase in Chinese immigrants led to an increase in membership of the Association. In the 1970s the cultural activities held at the Association aimed to maintain cultural heritage and language for the next generation. The hall is the location of the Association's administration and as an important place for the Chinese community. The Chung Wah Banner has particular social value for the Chinese community, for its history, aesthetic value and associations with the Hall. The banner, made of red and blue satin, is embroidered with Chinese characters and symbols, while the white lining is painted in a traditional folk style

STATEMENT OF SIGNIFICANCE

The place displays aesthetic characteristics representative of the Federation Free style which contribute to the eclectic mix of visual and cultural qualities of the Northbridge townscape.
The place is a landmark in Northbridge since its construction in 1911.The place was designed by architects Wright, Powell and Cameron, the place adopts an established style with little expression of the ethnic association of the user group.
The place is the home of the Chung Wah Association which developed as a response to the needs of Chinese immigrants at the turn of the twentieth century, the majority of whom were single men.
The place is highly valued by the Chinese and wider community for its social, cultural and historic associations.
The place is representative of the ongoing commitment of the Chung Wah Association to the cultural, social and educational life of the Chinese community in Western Australia.

HISTORY

The area to the north of Perth (now known as Northbridge) was valued by the Whadjuk Nyoongar for its low lying and swampy lakes system, which provided abundant resources. After colonisation, this land was not settled as quickly as drier areas on the ridge of Perth. In 1854 some of the swampy land to the north of Perth was drained producing fertile land for farming. As the population grew during the convict era of the 1850s the land was subdivided into allotments circa 1860 and taken up by discharged soldiers, artisans and small landholders. The area at this period was characterised by small cottages and businesses.
In 1881 the railway from Fremantle to Guildford was opened and became the main transport route. From that period commerce and trade tended to focus on smaller commercial enterprises and manufacturing to the north. It was less fashionable to live north of the railway line, however the area was close to the city and during the 1890s and early 1900s was substantially redeveloped with further subdivision of lots and mixed residential and commercial development. This was an immediate response to the tripling of the State's population in the recent decade due to the gold boom, and a pressing demand for affordable accommodation.
A number of trade and community organisations had their origins in the area at this time. Over the years the population of the area changed as people relocated to suburban areas of the city. As a result, Northbridge became the home for successive migrant communities. for example, communities including Greek, Italian, Chinese and more recently Vietnamese migrants have settled here as property remained relatively cheap and had the advantage of being close to the city. These communities have over the years given this area a distinctive character, generally recycling the existing buildings rather than redeveloping the area. Northbridge,

named because it is just north of Perth across the railway bridge, was approved as a suburb name in 1982. Prior to 1908 James Street had different numbering. The row of three shops at Nos. 132-136 was earlier Nos. 116. The shops may have replaced earlier residences, as the Post Office Directory of 1905 lists individual names and in 1900, a boarding house at No. 116. From 1909, Robert Anderson is at No. 132, and William Nicholson, a house and land agent, is at No. 136. In 1915 the shops are Hop Hing & Co, tea merchants (No. 132-134) and W. S. Goon & Co, Banana merchants (No. 136). Various retailers occupy the premises in the 1920s and 1930s. In 1935, Ristorante Italiano is at No. 132 and by 1949, occupies the whole row of shops.
The Metropolitan Water Supply Survey plan dated 1950 shows that each shop had a re-entrant door on the south side of its boundary, which is no longer evident; the shopfront has been modified to one entry at the original entry to No. 136.At 2022, the three shops are occupied by Chocolateria San Churro, a Spanish dessert chain restaurant.

HISTORY

The area to the north of Perth (now known as Northbridge) was valued by the Whadjuk Nyoongar for its low lying and swampy lakes system, which provided abundant resources. After colonisation, this land was not settled as quickly as drier areas on the ridge of Perth. In 1854 some of the swampy land to the north of Perth was drained producing fertile land for farming. As the population grew during the convict era of the 1850s the land was subdivided into allotments circa 1860 and taken up by discharged soldiers, artisans and small landholders. The area at this period was characterised by small cottages and businesses.
In 1881 the railway from Fremantle to Guildford was opened and became the main transport route. From that period commerce and trade tended to focus on smaller commercial enterprises and manufacturing to the north. It was less fashionable to live north of the railway line, however the area was close to the city and during the 1890s and early 1900s was substantially redeveloped with further subdivision of lots and mixed residential and commercial development. This was an immediate response to the tripling of the State's population in the recent decade due to the gold boom, and a pressing demand for affordable accommodation.
A number of trade and community organisations had their origins in the area at this time.
Over the years the population of the area changed as people relocated to suburban areas of the city. As a result, Northbridge became the home for successive migrant communities. for example, communities including Greek, Italian, Chinese and more recently Vietnamese migrants have settled here as property remained relatively cheap and had the advantage of being close to the city. These communities have over the years given this area a distinctive character, generally recycling the existing buildings rather than redeveloping the area.

Northbridge, named because it is just north of Perth across the railway bridge, was approved as a suburb name in 1982. Current Lot 101 James Street was originally four houses. The Metropolitan Water Supply Survey plan dated 1949 shows two single houses at No. 160 and 163, and a semi-detached pair at Nos. 166-168 on the corner of James Street and Mountain Terrace. Between 1965 and 1970 the corner pair of houses were demolished and a new large building erected. Between 1970 and 1974 the house at No. 60 was demolished for a new building. By 1977 the middle house was developed and there was a two storey complex with three street front outlets. The complex was redeveloped in the early 1990s by Sydney-based Ron Regan of Entrevision Pty. Ltd and opened in 1992 as Cinema Paradiso. Regan had previously leased the Astor Cinema in 1988, effectively saving it from demolition. Cinema Paradiso had four cinemas, and operated as an arthouse cinema, screening international film festivals, particularly the Italian Film Festival, over several decades. It was named after the 1988 Italian film-lovers classic. Cinema Paradiso traded under the Luna Palace banner for 20 years before it became known as Palace Cinema Paradiso in 2018. It closed in 2019 during the COVID-19 pandemic and permanently closed in June 2020.

WESTERN AUSTRALIAN HISTORIC THEME

HISTORY

The area to the north of Perth (now known as Northbridge) was valued by the Whadjuk Nyoongar for its low lying and swampy lakes system, which provided abundant resources. After colonisation, this land was not settled as quickly as drier areas on the ridge of Perth. In 1854 some of the swampy land to the north of Perth was drained producing fertile land for farming. As the population grew during the convict era of the 1850s the land was subdivided into allotments circa 1860 and taken up by discharged soldiers, artisans and small landholders. The area at this period was characterised by small cottages and businesses.
In 1881 the railway from Fremantle to Guildford was opened and became the main transport route. From that period commerce and trade tended to focus on smaller commercial enterprises and manufacturing to the north. It was less fashionable to live north of the railway line, however the area was close to the city and during the 1890s and early 1900s was substantially redeveloped with further subdivision of lots and mixed residential and commercial development. This was an immediate response to the tripling of the State's population in the recent decade due to the gold boom, and a pressing demand for affordable accommodation.
A number of trade and community organisations had their origins in the area at this time. Over the years the population of the area changed as people relocated to suburban areas of the city. As a result, Northbridge became the home for successive migrant communities. for example, communities including Greek, Italian, Chinese and more recently Vietnamese migrants have settled here as property remained relatively cheap and had the advantage of being close to the city. These communities have over the years given this area a distinctive character, generally recycling the existing buildings rather than redeveloping the area. Northbridge,

named because it is just north of Perth across the railway bridge, was approved as a suburb name in 1982. The Metropolitan Water Supply Survey plan dated 1949 shows that the current No. 178 James Street was originally No. 174, a straight frontage, brick house with a full-length front verandah.
Post Office Directories show it had an earlier number of 178, with the houses either side being 174 and 182. The house dates from c. 1918. The historical 2007 and 2009 Google Street view shows a Federation era house with a hipped and gable roof, a tall chimney is evident, and the front verandah was enclosed. The front garden was bounded by a low masonry rendered wall. The house remained as such until 2011 when a modern shopfront was added into the space that was the original front garden. The place opened as 'Perth 178 Backpacker' in 2011. Aerial photos show that the original roof form of the house remains but internal photos from online reviews and travel websites show that it retains little original fabric.

WESTERN AUSTRALIAN HISTORIC THEME

1. Demographic settlement and mobility - 104 Land allocation and subdivision

HISTORY

Russell Square was named after Lord John Russell, Secretary of State for Colonies, 1839, and Prime Minister 1846-1852.Russell Square was set aside as a reserve in 1873. In the mid-1890s Perth City Council's City Parks and Garden Committee established Russell Square with fountains and landscaping to form the character of the park. The park was an important recreation space for the local residents. With the migration of European people it was known as Il Parco Dei Sosperi (The Park of Sighs) due to the number of Italian couples who spent time in the park courting.
Northbridge is an inner suburban area, named because it is just north of Perth across the railway bridge. It was approved as a suburb name in 1982.The place is used for Fringe World each summer.

WESTERN AUSTRALIAN HISTORIC THEME

1. Demographic settlement and mobility - 104 Land allocation & subdivision
4. Social and civic activities - 405 Sport, recreation & entertainment

AUSTRALIAN HISTORIC THEME

3. Developing Local, Regional and National Economies - 3.11 Altering the environment
4.Building Perth (Settlements & Cities) - 4.1.2 Making suburbs
4.Building Perth (Settlements & Cities) - 4.6 Remembering significant phases in the development of Perth centres
8. Developing Australia's Cultural Life - 8.1.3 Developing public parks & gardens
8. Developing Australia's Cultural Life - 8.10 Pursuing excellence in the arts & sciences

STATEMENT OF SIGNIFICANCE

The park which originated in the colonial period has a long-standing link with the local neighbourhood and is amongst the oldest of the city's limited number of important public open spaces from this period.
The park is significant both as an amenity in its own right and for its amenity of the surrounding streetscape and locality of which the park is a central focus and organising element.
The mature trees in the park have a high level of cultural significance as a group, and as individual specimens. They are landmarks in the townscape and contribute to the vistas alone some of the principal streets in Northbridge.
The trees are representative of the species widely planted in public places and institutional gardens in the late nineteenth and early twentieth century.
The park is significant for its association with the evolution and development of the city form and fabric in the colonial period and early twentieth century and display characteristics of that period in their scale geometric layout and selection of trees that were planted. The park is significant for its contribution to the identity of the locality and for association with particular ethnic communities and former residents.

NATURE OF SIGNIFICANCE

HERCON Value A - Its importance in demonstrating the evolution or pattern of Perth's history

The park which originated in the colonial period has a long-standing link with the local neighbourhood and is amongst the oldest of the city's limited number of important public open spaces from this period.
The park is significant for its association with the evolution and development of the city form and fabric in the colonial period and early twentieth century and display characteristics of that period in their scale geometric layout and selection of trees that were planted.

HERCON Value B - Its importance in demonstrating rare, uncommon or endangered aspects of Perth's heritage

HERCON Value C - Its potential to yield information that will contribute to an understanding of Perth's history

HERCON Value D - Its importance in demonstrating the characteristics of a broader class of places

The trees are representative of the species widely planted in public places and institutional gardens in the late nineteenth and early twentieth century.

HERCON Value E - Any strong or special meaning it may have for any group or community because of social, cultural or spiritual associations

The park is significant for its contribution to the identity of the locality and for association with particular ethnic communities and former residents.

HERCON Value F - Its importance in exhibiting particular aesthetic characteristics valued by any group or community

The park is significant both as an amenity in its own right and for its amenity of the surrounding streetscape and locality of which the park is a central focus and organising element.
The mature trees in the park have a high level of cultural significance as a group, and as individual specimens. They are landmarks in the townscape and contribute to the vistas alone some of the principal streets in Northbridge.

HERCON Value G - Any special association it may have with the life or work of a person, group or organization of importance in Perth's history

HERCON Value H - Its importance in demonstrating a high degree of creative or technical achievement

HERCON Value I - Any HERCON Value I - Any other characteristic it may have that in the opinion of the decision-making body is relevant

CONDITION AND AUTHENTICITY

Condition	Good
Building Fabric Authenticity	Medium level of authenticity.

CLASSIFICATION OF SIGNIFICANCE

Exceptional – Category 1 - Essential to the heritage of the locality. Rare or outstanding example.

Architectural Style 2 General	Inter-War (c.1915-c.1940)
Architectural Style 2 Specific	
Archaeology	
Physical Description	

Two-storey, roughcast rendered brick hotel building with truncated brick, steeply pitched hipped corrugated iron roof and tall chimneys. Original U-shaped plan remains with truncated entry. Original face-brick has been obscured with render and the original and early verandah and balcony has been removed and replaced with a modern verandah, and a modern cantilevered awning has been introduced to the eastern end of the north elevation on James Street. Original ground floor windows and side entries have been enlarged and replaced with bay windows and French doors, and original entry door also replaced. Existing first floor openings to the Streets reflect the original opening pattern however doors to the balcony have been replaced with double hung windows. Opening to the hollow of the U plan reflect the original. Refer to State Heritage Office and National Trust Assessments for detailed external description of the place at 1999.Note that all fabric associated with changes undertaken in the late Twentieth Century and early Twenty-first Century is considered intrusive. The interior is largely modified at ground floor with remnants of original room layout (such as wall nibs). Timber staircase original but has been relocated. Modified floor space at first floor with evidence of former room layout evidence through fire places and wall nibs. Some original detail remains including lathe and plaster ceiling molded dado wall panels (anaglypta wall covering) with timber bead, timber floor, skirting, doors and architraves.
Early and original accommodation wings at first floor largely reflect the original layout. Refer to State Heritage Office and National Trust Assessments for detailed internal description of the place at 1999.Note that all fabric associated with changes undertaken in the late Twentieth Century and early Twenty-first Century is considered intrusive. MHI 2001 details - 2 storey painted, rendered brick hotel building with truncated brick hipped roof and tall chimneys. Loss of some original detail to ground floor. Double hung windows to first floor. Loss of original verandah.
Additions to James Street elevations.

HISTORY

The place has a long association with the Swan Brewery Company from when it was purchased by the managing directors in 1887 until sold in 1982. Little is known of the early history of the Hotel except that it was most likely a two-storey structure and was built for a business called Smith and Company. The first mention of the Victoria Hotel in the government Gazette licensing notices was in March 1885. In 1887 the Hotel was purchased by the partnership of John Ferguson and William Mumme, who were at the time managing directors of the successful Swan Brewery. The place reflects the new design of two-storey hotels, many of which were situated on a street corner, with public rooms on the ground floor and accommodation on the first floor. Northbridge is an inner suburban area, named because it is just north of Perth across the railway bridge. It was approved as a suburb name in 1982.

WESTERN AUSTRALIAN HISTORIC THEME

1. Demographic settlement & mobility - 107 Settlements
3. Occupations - 311 Hospitality industry and tourism

AUSTRALIAN HISTORIC THEME

8. Developing Australia's Cultural Life - 8.4 Eating & drinking

STATEMENT OF SIGNIFICANCE

The place makes a significant contribution to the streetscape, standing on a prominent corner addressing the open space of Russell Square and forming the entry to the built-up part of James Street.
The aesthetic qualities of its building fabric have associations with both late nineteenth and early twentieth century architecture.
The place is an example of a commercial building constructed during the period of economic affluence and increased development that followed the gold boom.
The place represents the development of the City of Perth in the period before the gold rush of the 1890s.
The place reflects the new design of two-storey hotels, many of which were situated on a street corner, with public rooms on the ground floor and accommodation on the first floor.
The erection of purpose-built hotels was popular during the gold rush period and was further consolidated by the Liquor Licensing Amendment Act of 1922.
The place is closely associated with the prominent and long-standing Perth construction company of A.T. Brine and Sons, who conducted the major renovations and additions in 1927-1928.
The place has a long close association with the Swan Brewery Company, which owned the place from the time that its managing director, John Ferguson and William Mumme, purchased it in 1887 until it was sold by the Company to private investors in 1982.
The place represents a special place for members of the community associated with the development of that area.
The place has been a popular place of leisure and entertainment since c.1885.
The place is representative of nineteenth century hotels which have been significantly altered in the Inter-War years and later, and which have recently been restored to simulate their original period.
The Federal Hotel and the Orient Hotel in Fremantle are other examples.

NATURE OF SIGNIFICANCE

HERCON Value A - Its importance in demonstrating the evolution or pattern of Perth's history

HERCON Value B - Its importance in demonstrating rare, uncommon or endangered aspects of Perth's heritage

HERCON Value C - Its potential to yield information that will contribute to an understanding of Perth's history

HERCON Value D - Its importance in demonstrating the characteristics of a broader class of places

The place is an example of a commercial building constructed during the period of economic affluence and increased development that followed the gold boom. The place represents the development of the City of Perth in the period before the gold rush of the 1890s.

HERCON Value E - Any strong or special meaning it may have for any group or community because of social, cultural or spiritual associations

The place represents a special place for members of the community associated with the development of that area.
The place has been a popular place of leisure and entertainment since c.1885.

HERCON Value F - Its importance in exhibiting particular aesthetic characteristics valued by any group or community

The place makes a significant contribution to the streetscape, standing on a prominent corner addressing the open space of Russell Square and forming the entry to the built-up part of James Street. The aesthetic qualities of its building fabric have associations with both late nineteenth and early twentieth century architecture. The place reflects the new design of two-storey hotels, many of which were situated on a street corner, with public rooms on the ground floor and accommodation on the first floor. HISTORY

The hotel was first constructed in 1885 and was first known as the Clarendon Hotel. Its first licensee was John Molloy and a cottage was located on site, probably for use by the licensee. It was noted that this hotel was the first to install electric lights, telephones and water and was one of the better hotels in Perth at the time. Fitzgerald Street was a main route to the city and areas north of the city where market gardens were located and was a popular place to stop on the way to the Wellington Street markets. The building was renovated in the 1920s and a two-storey addition was built. The name was changed in 1984 to the Fitzgerald Hotel.
Northbridge is an inner suburban area, named because it is just north of Perth across the railway bridge. It was approved as a suburb name in 1982.

HISTORY

St Brigid's Convent and School were established in the 1880's by the Sisters of Mercy. The first school building on the Fitzgerald Street site was designed by Sir J.J. Talbot Hobbs in 1889 and consisted of two large halls and two small classrooms. In 1892, another hall was added perpendicular to the existing hall. Circa 1922 the southern wall of the building fronting John Street was rebuilt and a rendered sign 'Saint Brigid's Parish Hall' was added.
In 1921 the two storey section fronting Fitzgerald Street was built on to the design by architect R.J. Dennely.
In 1978 the steel framed structure referred to as 'the Annexe' was built for the Ceramics Department of the Perth Technical College Department of Arts and Design.
Northbridge is an inner suburban area, named because it is just north of Perth across the railway bridge. It was approved as a suburb name in 1982.

2. Peopling Australia - 2.4 Migrating
4. Building Settlements, Town and Cities - 4.1.5 Developing city centres
6. Educating - 6.2 Establishing schools
8. Developing Australia's Cultural Life - 8.6 Worshipping

STATEMENT OF SIGNIFICANCE

The place is a long-standing landmark in the district as a fine collection of buildings constructed at the end of the nineteenth and beginning of the twentieth that collectively form an important historic group of places that is visually complex and harmonious.
St Brigid's Convent is an excellent example of a convent with an outstanding oratory, featuring a hammer beamed trussed roof, painted dado and leadlight panel bay windows with decorative gold painted arches.
The place is an early example of the work of the Sisters of Mercy who came to Western Australia in the 1800s to educate and mission, and established convent schools in a number of suburban and regional areas in the late 1800s and into the 1900s.
The place is valued by the local and wider Catholic community for its continuing associations with the Catholic Church in general and the Sisters of Mercy in particular.
The principal buildings at the place were designed by prominent Western Australian architects: Parish Hall (original primary school building) designed by J J Talbot Hobbs; Convent and Church designed by Cavanagh and Cavanagh; and, Convent School designed by R Dennehy.
The place is an example of Federation Gothic architecture that is uncommon within the metropolitan area.
The c 1882-1885 cottage is associated with William Canroy, who became a benefactor of the Sisters of mercy when he was executed for murder.

Church Hall constructed in the nineteenth century with facade dating from 1922. Two tone Flemish bond brickwork and iron gabled roof to main body of the hall.

Walls 1 Material	Brick - Face
Walls 2 Material	
Roof Material	Metal - Corrugated Iron
Architect	
Builder	
Other Associations	

HISTORY

St. Brigid's Parish Hall was originally constructed as part of St. Brigid's School circa 1890. A new facade was added to the southern end in 1922 with a rendered sign attached. Facade matches the detail of the two-storey school building constructed at the same time. Northbridge is an inner suburban area, named because it is just north of Perth across the railway bridge. It was approved as a suburb name in 1982.

WESTERN AUSTRALIAN HISTORIC THEME

STATEMENT OF SIGNIFICANCE

The place is a long-standing landmark in the district as a fine collection of buildings constructed at the end of the nineteenth and beginning of the twentieth that collectively form an important historic group of places that is visually complex and harmonious.
The place provides important evidence of the development of the Perth and West Perth district, its class and religious demographic, and the development of Catholic primary and more latterly secondary education in the State.
The place is an early example of the work of the Sisters of Mercy who came to Western Australia in the 1800s to educate and mission, and established convent schools in a number of suburban and regional areas in the late 1800s and into the 1900s.
The place is valued by the local and wider Catholic community for its continuing associations with the Catholic Church in general and the Sisters of Mercy in particular.
The principal buildings at the place were designed by prominent Western Australian architects: Parish Hall (original primary school building) designed by J J Talbot Hobbs; Convent and Church designed by Cavanagh and Cavanagh; and, Convent School designed by R Dennehy.

NATURE OF SIGNIFICANCE

HERCON Value A - Its importance in demonstrating the evolution or pattern of Perth's history

The place provides important evidence of the development of the Perth and West Perth district, its class and religious demographic, and the development of Catholic primary and more latterly secondary education in the State.
The place is an early example of the work of the Sisters of Mercy who came to Western Australia in the 1800s to educate and mission, and established convent schools in a number of suburban and regional areas in the late 1800s and into the 1900s.

HERCON Value B - Its importance in demonstrating rare, uncommon or endangered aspects of Perth's heritage

HERCON Value C - Its potential to yield information that will contribute to an understanding of Perth's history

HERCON Value D - Its importance in demonstrating the characteristics of a broader class of places

HERCON Value E - Any strong or special meaning it may have for any group or community because of social, cultural or spiritual associations

The place is valued by the local and wider Catholic community for its continuing associations with the Catholic Church in general and the Sisters of Mercy in particular.

HERCON Value F - Its importance in exhibiting particular aesthetic characteristics valued by any group or community

The place is a long-standing landmark in the district as a fine collection of buildings constructed at the end of the nineteenth and beginning of the twentieth that collectively form an important historic group of places that is visually complex and harmonious.

HERCON Value G - Any special association it may have with the life or work of a person, group or organization of importance in Perth's history

The principal buildings at the place were designed by prominent Western Australian architects: Parish Hall (original primary school building) designed by J J Talbot Hobbs; Convent and Church designed by Cavanagh and Cavanagh; and, Convent School designed by R Dennehy.

HERCON Value H - Its importance in demonstrating a high degree of creative or technical achievement

HERCON Value I - Any HERCON Value I - Any other characteristic it may have that in the opinion of the decision making body is relevant

CONDITION AND AUTHENTICITY

Condition	Good
Building Fabric Authenticity	Medium level of authenticity. Altered in 1922 (new facade).

CLASSIFICATION OF SIGNIFICANCE

Exceptional – Category 1 – Essential to the heritage of the locality. Rare or outstanding example.

HISTORY

In 1890 Western Australia achieved responsible government. this, combined with the discoveries of gold in the early 1890's, provided the catalyst for development in Perth. King Street was gazetted in 1845 and named after King William IV. Prior to the 1890's the area around King St. was characterised by workers cottages with shops, coal yards, smithies and foundries located in the adjacent areas of Murray and Hay Streets. In the mid 1890's some smaller businesses began to establish themselves in existing cottages and a number of larger enterprises erected substantial new offices and warehouses in the area. Earlier uses primarily served the local population, however this later development was more broadly based and was a direct response to the expansion of the city centre during the gold rush. The period from the 1890's to early decades of the twentieth century was characterised by a vigorous public works and corresponding expansion of commerce and trade. During this period, the character of the area around King St. was established. This area has recently (1990's) undergone a substantial program of restoration and is now characterised by new uses including cafes, boutiques and professional offices. Ackroyd Buildings originally comprised five separate shops for Chinese merchants and tea importers. In 1929 advertising for Lapthornes Ltd, a woodworking machinery company was located in the building at 36-38 King Street. Lapthornes was a company which was established in the eastern states and opened a shop in WA. Saunders and Stuart also had a showroom in the building at the same time.

WESTERN AUSTRALIAN HISTORIC THEME

This area has recently (1990's) undergone a substantial program of restoration and is now characterised by new uses including cafes, boutiques and professional offices.
Originally in factory and warehouse for Halsey and Co Boot Manufactures, however no information was found on this company. In 1909 Messrs Ellis and Hames, importers were located in the building. Hugh Fulton and Alfred Raphael and Co were also located in the building at this time. Messrs Unbeham and Johnstone, electricians who advertised their warehouse, works and offices were located in the building in 1919 until 1923. Other businesses included Rope and Binder Twine Co, Bushells tea and Craig and Co wireless radio engineers

and specialists who were located in the building from 1924 to 1931 when they moved to another building in Perth. The Womens Land Army also had an office in 1945.

King Street was gazetted in 1845 and named after King William IV. Prior to the 1890's the area around King St. was characterised by workers cottages with shops, coal yards, smithies and foundries located in the adjacent areas of Murray and Hay Streets. In the mid 1890's some smaller businesses began to establish themselves in existing cottages and a number of larger enterprises erected substantial new offices and warehouses in the area. Earlier uses primarily served the local population, however this later development was more broadly based and was a direct response to the expansion of the city centre during the gold rush.
The period from the 1890's to early decades of the twentieth century was characterised by a vigorous public works and corresponding expansion of commerce and trade. During this period, the character of the area around King St. was established. This area has recently (1990's) undergone a substantial program of restoration and is now characterised by new uses including cafes, boutiques and professional offices.
Building constructed as a printing works for R. Sampson printers. The street number at the time was 69-70 King Street. The first advertising for the business occurred in 1907, indicating that the building dates from around this time. Their motto “Sine Mora” meaning without delay is written on the parapet. Publications include The Western Sentinel and Truth newspapers and The Motorist and Wheelman paper. In 1920 the Spiritualistic Church was located in the building.

STATEMENT OF SIGNIFICANCE

The place is of aesthetic significance as an example of a commercial building constructed during the period of economic affluence and increased development that followed the gold boom.
The place is of aesthetic significance because it contributes to the visual quality of its location.
The place is of historic significance because it reflects the expansion and development of commerce and trade in the City of Perth in the early years of the twentieth century.
The place is a representative example of a commercial building constructed in Perth during the period of development and consolidation following the gold boom.

NATURE OF SIGNIFICANCE

HERCON Value A - Its importance in demonstrating the evolution or pattern of Perth's history

The place is of historic significance because it reflects the expansion and development of commerce and trade in the City of Perth in the early years of the twentieth century.

HERCON Value B - Its importance in demonstrating rare, uncommon or endangered aspects of Perth's heritage

HERCON Value C - Its potential to yield information that will contribute to an understanding of Perth's history

HERCON Value D - Its importance in demonstrating the characteristics of a broader class of places

The place is a representative example of a commercial building constructed in Perth during the period of development and consolidation following the gold boom.

HERCON Value E - Any strong or special meaning it may have for any group or community because of social, cultural or spiritual associations

HERCON Value F - Its importance in exhibiting particular aesthetic characteristics valued by any group or community

The place is of aesthetic significance as an example of a commercial building constructed during the period of economic affluence and increased development that followed the gold boom.
The place is of aesthetic significance because it contributes to the visual quality of its location.

HERCON Value G - Any special association it may have with the life or work of a person, group or organization of importance in Perth's history

HERCON Value H - Its importance in demonstrating a high degree of creative or technical achievement

HERCON Value I - Any HERCON Value I - Any other characteristic it may have that in the opinion of the decision-making body is relevant

CONDITION AND AUTHENTICITY

Condition	Good
Building Fabric Authenticity	Medium level of authenticity as it has been restored to original detail at first floor level.

CLASSIFICATION OF SIGNIFICANCE

Considerable – Category 2 - Very important to the heritage of the locality.

HISTORY

In 1890 Western Australia achieved responsible government. this, combined with the discoveries of gold in the early 1890's, provided the catalyst for development in Perth. King Street was gazetted in 1845 and named after King William IV.
Prior to the 1890's the area around King St. was characterised by workers cottages with shops, coal yards, smithies and foundries located in the adjacent areas of Murray and Hay Streets. In the mid 1890's some smaller businesses began to establish themselves in existing cottages and a number of larger enterprises erected substantial new offices and warehouses in the area. Earlier uses primarily served the local population, however this later development was more broadly based and was a direct response to the expansion of the city centre during the gold rush. The period from the 1890's to early decades of the twentieth century was characterised by a vigorous public works and corresponding expansion of commerce and trade. During this period, the character of the area around King St. was established. This area has recently (1990's) undergone a substantial program of restoration and is now characterised by new uses including cafes, boutiques and professional offices.
Originally a warehouse for F.A. Henriques, cork merchant as well as all lines in cordial manufacture, essences and aerating machines. The building was originally constructed in 1903 and tenders were called in January. The business was previously located in William Street and also had an office in Fremantle. The building was

extended in 1920. The business was still located in King Street in the early 1950s. In 1952 the business name changed to reflect the change in ownership.
In 1982 the Red Cross central city blood donor centre was located in the building.

STATEMENT OF SIGNIFICANCE

The place is of aesthetic significance as an example of a commercial building constructed during the period of economic affluence and increased development that followed the gold boom.
The place is of aesthetic significance because it contributes to the visual quality of its location.
The place is of historic significance because it reflects the expansion and development of commerce and trade in the City of Perth in the early years of the twentieth century.
The place is a representative example of a commercial building constructed in Perth during the period of development and consolidation following the gold boom.

NATURE OF SIGNIFICANCE

HERCON Value A - Its importance in demonstrating the evolution or pattern of Perth's history

The place is of historic significance because it reflects the expansion and development of commerce and trade in the City of Perth in the early years of the twentieth century.

HERCON Value B - Its importance in demonstrating rare, uncommon or endangered aspects of Perth's heritage

HERCON Value C - Its potential to yield information that will contribute to an understanding of Perth's history

HERCON Value D - Its importance in demonstrating the characteristics of a broader class of places

The place is a representative example of a commercial building constructed in Perth during the period of development and consolidation following the gold boom.

HERCON Value E - Any strong or special meaning it may have for any group or community because of social, cultural or spiritual associations

HERCON Value F - Its importance in exhibiting particular aesthetic characteristics valued by any group or community

The place is of aesthetic significance as an example of a commercial building constructed during the period of economic affluence and increased development that followed the gold boom.
The place is of aesthetic significance because it contributes to the visual quality of its location.

HERCON Value G - Any special association it may have with the life or work of a person, group or organization of importance in Perth's history

HERCON Value H - Its importance in demonstrating a high degree of creative or technical achievement

HERCON Value I - Any HERCON Value I - Any other characteristic it may have that in the opinion of the decision-making body is relevant

CONDITION AND AUTHENTICITY

Condition	Very Good
Building Fabric Authenticity	Medium level of authenticity as it is largely as originally constructed with detail intact.

CLASSIFICATION OF SIGNIFICANCE

Considerable – Category 2 - Very important to the heritage of the locality.

HISTORY

In 1890 Western Australia achieved responsible government. This, combined with the discovery of gold in the early 1890's, provided the catalyst for development in Perth. King St. was gazetted in 1845 and named after King William IV. Prior to the 1890's the area around King St. was characterised by workers cottages with shops, coal yards, smithies and foundries located in the adjacent areas of Murray and Hay Streets. In the mid 1890's some smaller businesses began to establish themselves in existing cottages and a number of larger enterprises erected substantial new offices and warehouses in the area. Earlier uses primarily served the local population, however this later development was more broadly based and was a direct response to the expansion of the city centre during the gold rush.
The period from the 1890's to early decades of the twentieth century was characterised by a vigorous public works and corresponding expansion of commerce and trade. During this period, the character of the area around King St. was established. This area has recently (1990's) undergone a substantial program of restoration and is now characterised by new uses including cafes, boutiques and professional offices. Warehouse originally constructed for Maddox and Lawrence Wholesaler confectioners in the early 1920s. The building also housed offices for agents Wilson, Gray and Co, G Gramp and Sons wine merchants in the 1930s, as well as a milliner in 1928. In the 1940s the distributors, A G Rains and Co, of Alcock and Co billiard table makers had an office in the building. In the 1950s Australian Glass Manufacturers Co were located in the building.

HISTORY

In 1890 Western Australia achieved responsible government. This, combined with the discovery of gold in the early 1890's, provided the catalyst for development in Perth. King St. was gazetted in 1845 and named after King William IV. Prior to the 1890's the area around King St. was characterised by workers cottages with shops, coal yards, smithies and foundries located in the adjacent areas of Murray and Hay Streets.
In the mid 1890's some smaller businesses began to establish themselves in existing cottages and a number of larger enterprises erected substantial new offices and warehouses in the area. Earlier uses primarily served the local population, however this later development was more broadly based and was a direct response to the expansion of the city centre during the gold rush.

The period from the 1890's to early decades of the twentieth century was characterised by a vigorous public works and corresponding expansion of commerce and trade. During this period, the character of the area around King St. was established. This area has recently (1990's) undergone a substantial program of restoration and is now characterised by new uses including cafes, boutiques and professional offices. Constructed in 1905 as a warehouse and office for Richard Purser, importer. The company was still located in the building in 1924. Other businesses in the building included R M Manning and Co, 1917 to 1922, and Burridge and Warren Ltd (1929).

STATEMENT OF SIGNIFICANCE

The place is of aesthetic significance as an example of a commercial building constructed during the Inter War period.
The place is of aesthetic significance because it contributes to the visual quality of its location.
The place is of historic significance because it reflects the expansion and development of commerce and trade in the City of Perth in the early years of the twentieth century.
The place is a representative example of a commercial building constructed in Perth during the period of development and consolidation following the gold boom.

NATURE OF SIGNIFICANCE

HERCON Value A - Its importance in demonstrating the evolution or pattern of Perth's history

The place is of historic significance because it reflects the expansion and development of commerce and trade in the City of Perth in the early years of the twentieth century.

HERCON Value B - Its importance in demonstrating rare, uncommon or endangered aspects of Perth's heritage

HERCON Value C - Its potential to yield information that will contribute to an understanding of Perth's history

HERCON Value D - Its importance in demonstrating the characteristics of a broader class of places

The place is a representative example of a commercial building constructed in Perth during the period of development and consolidation following the gold boom.

HERCON Value E - Any strong or special meaning it may have for any group or community because of social, cultural or spiritual associations

HERCON Value F - Its importance in exhibiting particular aesthetic characteristics valued by any group or community

The place is of aesthetic significance as an example of a commercial building constructed during the Inter War period.
The place is of aesthetic significance because it contributes to the visual quality of its location.

HERCON Value G - Any special association it may have with the life or work of a person, group or organization of importance in Perth's history

HERCON Value H - Its importance in demonstrating a high degree of creative or technical achievement

HERCON Value I - Any HERCON Value I - Any other characteristic it may have that in the opinion of the decision-making body is relevant

CONDITION AND AUTHENTICITY

Condition	Good
Building Fabric Authenticity	Medium level of authenticity as it is largely as originally constructed with detail intact.

CLASSIFICATION OF SIGNIFICANCE

Considerable – Category 2 - Very important to the heritage of the locality.

HISTORY

In 1890 Western Australia achieved responsible government. This, combined with the discovery of gold in the early 1890's, provided the catalyst for development in Perth. King Street was gazetted in 1845 and named after King William IV. Prior to the 1890's the area around King St. was characterised by workers cottages with shops, coal yards, smithies and foundries located in the adjacent areas of Murray and Hay St. In the mid 1890's some smaller businesses began to establish themselves in existing cottages and a number of larger enterprises erected substantial new offices and warehouses in the area. Earlier uses primarily served the local population, however this later development was more broadly based and was direct response to the expansion of the city centre during the gold rush. The period from the 1890's to early decades of the twentieth century was characterised by a vigorous public works and corresponding expansion of commerce and trade. During this period, the character of the area around King St. was established. This area has recently (1990's) undergone a substantial program of restoration and is now characterised by new uses including cafes, boutiques and professional offices. Warehouse building constructed towards the end of World War 1.

HISTORY

In 1890 Western Australia achieved responsible government. This, combined with the discovery of gold in the early 1890s, provided the catalyst for development in Perth. King Street was gazetted in 1845 and named after King William IV. Prior to the 1890s the area around King Street was characterised by workers' cottages with shops, coal yards, smithies and foundries located in the adjacent areas of Murray and Hay Street. In the mid 1890s some smaller businesses began to establish themselves in existing cottages and a number of larger enterprises erected substantial new offices and warehouses in the area. Earlier uses primarily served the local population, however this later development was more broadly based and was a direct response to the expansion of the city centre during the gold rush. The period from the late 1890s to early decades of the twentieth century was characterised by a vigorous public works and corresponding expansion of commerce and trade. During this period, the character of the area around King Street was established. In the 1990s, King underwent a substantial program of restoration and is now characterised by new uses including cafes, boutiques and professional offices. G & R Wills and Co. was a major soft goods (cloth and articles made from it) wholesaler established by brothers George and Richard Wills in 1853 in Adelaide. By 1922 the company also

had establishments in Melbourne, Perth, Fremantle, Kalgoorlie and Broken Hill as well as agencies in Sydney and Brisbane.
The warehouse building at 573 Wellington Street was apparently built in 1924 and provided office and storage for the Wills business. The Post Office Directory lists Hugo Fischer Ltd, ironmonger and wholesale saddler at 573 Wellington Street from 1920-1949; and no address of 82 King Street. The Wills' main Perth warehouse was at 789-705 Hay Street. It is possible a tenant leased the ground floor of the Wills' Wellington Street warehouse. The Metropolitan Water Supply Survey plan dated 1942 shows No. 573 Wellington Street extending almost to the rear of the lot boundary. There were four toilets on the rear fence and an engine room marked on the plan. The modified upper floors were added in 1950. The warehouse traded continuously until c. 1985 as a multi-storeyed warehouse for a wholesaler to the clothing industry, which was centred around King Street, Perth. In 2003 Wills Building was converted from a warehouse to a multi-storey apartment with a street address of 82 King Street by Scanlan Architects. The Wills Apartment development rejuvenated two existing vacant buildings, previously used as multi-level warehousing, into a residential apartment block incorporating 33 loft style apartments. The New York style service lift was retained and restored, as were many of the original steel windows featured on the Wellington Street façade.

HISTORY

Edith Cowan was a pioneer in the emergence of Western Australian Women into public life. She was a leader in virtually every social welfare and women's rights organisation from the mid 1890's including the Karrakatta Club, the North Fremantle District Board of Education, Children's Protection Society, House of Mercy, the Women's Service Guild and the National Council of Women. Edith Cowan was also a justice of the peace and a member of the bench of the Children's Court. During World War 1 Edith Cowan worked for the Recruiting Committee, the Red Cross and the Soldiers Welfare Committee. Edith Cowan along with other women of the time claimed the rights of full citizenship including the right to sit in Parliament. In 1921 Edith Cowan was elected to the Legislative Assembly as the Nationalist member for West Perth therefore being the first woman member of Parliament in Australia. One of Edith Cowan's first private member bills opened the legal profession to women.

After her death in 1932, the Western Australian National Council of Women decided to erect a memorial. After much discussion about the location and form of the memorial, permission was sought with the Perth City Council to place it in the roundabout at the entrance of Kings Park. There was opposition to the proposal due to its design and commemoration of a person who it was perceived was not of national significance. By 1934 the construction had started and it was unveiled later that year. Over time, recognition of her work has grown and she has been commemorated in other ways such as the Federal electoral seat of Cowan and naming the Edith Cowan University after her.

STATEMENT OF SIGNIFICANCE

The Memorial commemorates the life and achievements of Edith Dircksey Cowan, Australia's first woman parliamentarian.
The memorial is believed to be the first civic monument erected in Australia to honour an Australian woman.
The Memorial is a fine example of the Inter-War Art Deco style incorporating indigenous floral motifs.
The Memorial has landmark qualities and marks the entrance to Kings Park.
The Memorial was designed by architect Harold Boas, the bronze portrait bust of Edith Cowan was by artist Margaret Johnson.
The clocks on the Memorial are representative of the few remaining functioning public clocks in the city of Perth.

HISTORY

A 1897 plan (City of Perth No.7) shows the Mount Tennis Club on this location, albeit much smaller in area. It is thought that a group of West Perth residents who set up the Mount Tennis Club played social tennis in 1898 on a private court in the West Perth area and decided that they would like to establish a permanent club. As a result of their efforts the land for the first of our Club's courts was granted in King's Park (Perth Park) in 1899.
The two asphalt courts and the first clubhouse were just the beginnings of what was to come. By 1902 the first grass tennis courts and a croquet lawn had been laid, and they were available for play on opening day of 1903. In 1905 a third grass court was set up, and after an additional land grant from the King's Park Board in 1907, a further three grass courts were constructed in 1908. Circa 1905 the Club changed its name from Mount Tennis Club to King's Park Tennis Club. The first pavilion was built in 1914 (no longer extant), by which time there were 106 members and nine grass courts. A Members Stand and Pavilion was built in 1926, followed by the McGibbon Stand (1935) and the Mursell Stand (1956). The Eastman Building was erected in 1965.
In 2006 a new complex was built which includes an outdoor swimming pool. There are 30 tennis courts.

STATEMENT OF SIGNIFICANCE

The place is important as the major venue in Western Australia for State and international tennis competitions.
The place is held in high esteem by the community for its association with international-class sporting competitions, notable games and well-known sporting identities.
The Cape Dutch style of the spectator sports stands is rare in this State, as is the function of the place as an international tennis exhibition venue and its role as a major capital city institution.
The place exhibits notable achievement and artistic excellence in the design of its man-made settings and the association of lawn courts and spectator stands within a natural bushland setting.
The place contributes to the community's sense of cohesion through its accessibility to spectators and the media coverage of the sporting competitions which are held there.

Architectural Style 2 General	
Architectural Style 2 Specific	
Archaeology	
Physical Description	

The nurses memorial centre comprises two single storey brick buildings with slate roof with terracotta ridge capping and decorative elements. Both buildings retain original detail internally and externally including timber joinery and leadlight windows. The small building was originally constructed as a ballroom. A two-storey building constructed circa 1970 at the rear is not of heritage significance.

Walls 1 Material	Brick - Face
Walls 2 Material	
Roof Material	Tile - Terracotta
Architect	
Builder	William Henry Vincent
Other Associations	

HISTORY

In the 1890s the property was located on a larger property owned by Harry Ogborne.
In 1896 Perth City Council remade the roads in West Perth, creating a link between Perth, West Perth and Subiaco.
In 1901 this connecting road, Brooking Road was renamed King's Park Road on the occasion of the Duke of Cornwall's visit. King's Park was also named at this time.34 Kings Park Road was constructed in 1899 for prominent Perth builder William Henry Vincent. A ballroom was added by Vincent in 1910. Vincent worked in his father's building firm R P Vincent and Son which was involved in the construction of the Supreme Court (1901) extensions to Government House (1899) and the Horseshoe Bridge (1903). This was one of several large houses built at the time on King's Park Road which have since been demolished.
The house changed ownership during the twentieth century, remaining a private house and in 1960 the building was sold to the Australian Nursing Federation for office accommodation.

STATEMENT OF SIGNIFICANCE

The place is a fine example of a Federation Queen Anne style of residence in Perth.
The place demonstrates a high quality of architectural detailing and craftsmanship.
The place is an uncommon and representative example of the scale and style of residences built for more affluent citizens in West Perth at the turn-of-the century.

NATURE OF SIGNIFICANCE

HERCON Value A - Its importance in demonstrating the evolution or pattern of Perth's history

HERCON Value B - Its importance in demonstrating rare, uncommon or endangered aspects of Perth's heritage

HERCON Value C - Its potential to yield information that will contribute to an understanding of Perth's history

HERCON Value D - Its importance in demonstrating the characteristics of a broader class of places

The place is an uncommon and representative example of the scale and style of residences built for more affluent citizens in West Perth at the turn-of-the century.

HERCON Value E - Any strong or special meaning it may have for any group or community because of social, cultural or spiritual associations

HERCON Value F - Its importance in exhibiting particular aesthetic characteristics valued by any group or community

The place is a fine example of a Federation Queen Anne style of residence in Perth.
The place demonstrates a high quality of architectural detailing and craftsmanship.

HERCON Value G - Any special association it may have with the life or work of a person, group or organization of importance in Perth's history

HERCON Value H - Its importance in demonstrating a high degree of creative or technical achievement

Heritage Place Record Form

HISTORY

The area to the north of Perth (now known as Northbridge) was valued by the Whadjuk Nyoongar for its low lying and swampy lakes system, which provided abundant resources. After colonisation, this land was not settled as quickly as drier areas on the ridge of Perth. In 1854 some of the swampy land to the north of Perth was drained producing fertile land for farming. As the population grew during the convict era of the 1850s the land was subdivided into allotments circa 1860 and taken up by discharged soldiers, artisans and small landholders. The area at this period was characterised by small cottages and businesses.
In 1881 the railway from Fremantle to Guildford was opened and became the main transport route. From that period commerce and trade tended to focus on smaller commercial enterprises and manufacturing to the north. It was less fashionable to live north of the railway line, however the area was close to the city and during the 1890s and early 1900s was substantially redeveloped with further subdivision of lots and mixed residential and commercial development. This was an immediate response to the tripling of the State's population in the recent decade due to the gold boom, and a pressing demand for affordable accommodation.
A number of trade and community organisations had their origins in the area at this time. Over the years the population of the area changed as people relocated to suburban areas of the city. As a result, Northbridge became the home for successive migrant communities. for example, communities including Greek, Italian, Chinese and more recently Vietnamese migrants have settled here as property remained relatively cheap and had the advantage of being close to the city. These communities have over the years given this area a distinctive character, generally recycling the existing buildings rather than redeveloping the area. Northbridge,

named because it is just north of Perth across the railway bridge, was approved as a suburb name in 1982.Numbering on Lake Street changed to its current formation in 1908. No. 35 was originally No. 57 and was built by 1895, occupied by William Hood, bootmaker. The building is shown on the 1897 Perth Town Plan and listed in the Post Office Directory from 1895. The Metropolitan Water Supply Survey plan dated 1949 shows a brick house with a full length front verandah.
The front verandah has been extended to project out to the street and enclosed, which aerial photos show was done before 1948, but it is not shown on the 1949 survey plan.
In 2003, the rest of the former front yard was covered, so that there is now no setback.
In December 2020, the lease of the property was taken over by Matt Hatton, a local music promoter and director of Mad Hatter Productions. The previously derelict site lay to waste for some years as the former home of a national fast-food restaurant. Hatton had the interior constructed, for the most part, by musicians and the place has been converted into a 'secret bar'. (Hatton also operates a hidden bar in another heritage building, the Volstead Lounge at 414 Murray Street.) From the street the former house appears to be a convenience store. Entry to the bar/comedy club behind called 'Convenients' is through a fridge door. The place is not recognisable as a former Federation-era residence.

HISTORY

In the early years of the Swan River colony the area to the north of Perth (now known as Northbridge) was low lying and swampy and was therefore settled more slowly than the better land closer to the river. It was also further from the river port and the main means of transport. Northbridge is an inner suburban area, named because it is just north of Perth across the railway bridge. It was approved as a suburb name in 1982. In 1854 some of the swampy land to the north of Perth was drained producing some fertile land for farming and later subdivision. The land was subdivided into allotments circa 1860. Land in the area was taken up by discharged soldiers, artisans and small landholders. The area at this period was characterised by small cottages and businesses. In 1881, they railway from Fremantle to Guildford was opened and became the main transport route. From that period commerce and trade tended to focus around this area with smaller commercial enterprises and manufacturing to the north. It was less fashionable to live north of the railway line, however the area was close to the city and during the 1890's and early 1900's was substantially redeveloped with further subdivision of lots and mixed residential and commercial development. A number of trade and community organisations had their origins in the area at this time. Over the years the population of the area changed as people relocated to suburban areas of the city. As a result, Northbridge became the home for successive migrant communities. For example, communities including Greek, Italian, Chinese and more recently Vietnamese migrants have settled here as property remained relatively cheap and had the advantage of being

close to the city. These communities have over the years given this area a distinctive character, generally recycling the existing buildings rather than redeveloping the area.
William Atkins, contractor was listed in 1905 (No 78) in the Post Office directories. The house was called Reste. William was involved in the Dowerin to Merredin Railway. During the 1920s to 1950s many people were listed as living at the property. It is unknown when the house became known as Eleni House.

HISTORY

The area to the north of Perth (now known as Northbridge) was valued by the Whadjuk Nyoongar for its low lying and swampy lakes system, which provided abundant resources. After colonisation, this land was not settled as quickly as drier areas on the ridge of Perth. In 1854 some of the swampy land to the north of Perth was drained producing fertile land for farming. As the population grew during the convict era of the 1850s the land was subdivided into allotments circa 1860 and taken up by discharged soldiers, artisans and small landholders. The area at this period was characterised by small cottages and businesses.
In 1881 the railway from Fremantle to Guildford was opened and became the main transport route. From that period commerce and trade tended to focus on smaller commercial enterprises and manufacturing to the north. It was less fashionable to live north of the railway line, however the area was close to the city and during the 1890s and early 1900s was substantially redeveloped with further subdivision of lots and mixed residential and commercial development. This was an immediate response to the tripling of the State's population in the recent decade due to the gold boom, and a pressing demand for affordable accommodation.
A number of trade and community organisations had their origins in the area at this time.
Over the years the population of the area changed as people relocated to suburban areas of the city. As a result, Northbridge became the home for successive migrant communities. for example, communities including Greek, Italian, Chinese and more recently Vietnamese migrants have settled here as property remained relatively cheap and had the advantage of being close to the city. These communities have over the years given

this area a distinctive character, generally recycling the existing buildings rather than redeveloping the area. Northbridge, named because it is just north of Perth across the railway bridge, was approved as a suburb name in 1982. Numbering on Lake Street changed to its current formation in 1908. The earlier number for the corner property was 73. The 1897 Perth Town Plan shows a smaller building on the corner, so it is likely to have been redeveloped from a small residence to the two-story corner shop that it is today. The first commercial occupant is Ah Own, laundry from 1908. It continued to be a Chinese laundry to c. 1937, then operated by Sam Yick. In 1940 the listed occupant is Peter Rifici, hairdresser. This is the beginning of the Sam Rifici business enterprise. According to the Sam Rifici website, he established his first men's hairdressing business in Lake Street, Northbridge in January 1946 and opened a second salon in Wembley in 1950. His first ladies' salon was established in Hay Street, Perth in 1958. In 1959, Sam opened another ladies' hairdressing salon in Murray Street, the largest salon in Perth. From his humble beginnings he went on to establish a network of 23 salons throughout the Perth metropolitan area, Kalgoorlie and Singapore.
The Metropolitan Water Supply Survey plan dated 1949 shows a brick property with no street setback. No. 49 has a central re-entrant door, and No. 51 has a truncated corner. There is a brick garage at the rear, accessed off Francis Street. The rear of the building has a long staircase access, indicating two storeys. In 2009 the building was reroofed from tile to steel. The re-entrant door has been lost, but the corner entrance remains. The upstairs at the corner has been opened up into a balcony. The original verandahs are gone.

STATEMENT OF SIGNIFICANCE

The place has historic significance as a former commercial building dating from the first decade of the twentieth century.
It is representative of the commercial development of this part of Northbridge.
The place has associations with Sam Rifici, a well-known Perth hairdresser, whose first salon was established here in 1946.
The building contributes to the streetscape in scale and form.

NATURE OF SIGNIFICANCE

HERCON Value A - Its importance in demonstrating the evolution or pattern of Perth's history

The place has historic significance as a former commercial building dating from the first decade of the twentieth century.

HERCON Value B - Its importance in demonstrating rare, uncommon or endangered aspects of Perth's heritage

HERCON Value C - Its potential to yield information that will contribute to an understanding of Perth's history

HERCON Value D - Its importance in demonstrating the characteristics of a broader class of places

It is representative of the commercial development of this part of Northbridge.

HERCON Value E - Any strong or special meaning it may have for any group or community because of social, cultural or spiritual associations

HERCON Value F - Its importance in exhibiting particular aesthetic characteristics valued by any group or community

The building contributes to the streetscape in scale and form.

HERCON Value G - Any special association it may have with the life or work of a person, group or organization of importance in Perth's history

The place has associations with Sam Rifici, a well-known Perth hairdresser, whose first salon was established here in 1946.

HERCON Value H - Its importance in demonstrating a high degree of creative or technical achievement

HERCON Value I - Any HERCON Value I - Any other characteristic it may have that in the opinion of the decision making body is relevant

CONDITION AND AUTHENTICITY

Condition	Good
Building Fabric Authenticity	Medium. Largely as originally constructed with detail intact.

CLASSIFICATION OF SIGNIFICANCE

Some/moderate – Category 3 - Contributes to the heritage of the locality.

HISTORY

The area to the north of Perth (now known as Northbridge) was valued by the Whadjuk Nyoongar for its low lying and swampy lakes system, which provided abundant resources. After colonisation, this land was not settled as quickly as drier areas on the ridge of Perth. In 1854 some of the swampy land to the north of Perth was drained producing fertile land for farming. As the population grew during the convict era of the 1850s the land was subdivided into allotments circa 1860 and taken up by discharged soldiers, artisans and small landholders. The area at this period was characterised by small cottages and businesses.
In 1881 the railway from Fremantle to Guildford was opened and became the main transport route. From that period commerce and trade tended to focus on smaller commercial enterprises and manufacturing to the north. It was less fashionable to live north of the railway line, however the area was close to the city and during the 1890s and early 1900s was substantially redeveloped with further subdivision of lots and mixed residential and commercial development. This was an immediate response to the tripling of the State's population in the recent decade due to the gold boom, and a pressing demand for affordable accommodation.
A number of trade and community organisations had their origins in the area at this time. Over the years the population of the area changed as people relocated to suburban areas of the city. As a result, Northbridge became the home for successive migrant communities. for example, communities including Greek, Italian, Chinese and more recently Vietnamese migrants have settled here as property remained relatively cheap and had the advantage of being close to the city. These communities have over the years given this area a distinctive character, generally recycling the existing buildings rather than redeveloping the area. Northbridge,

named because it is just north of Perth across the railway bridge, was approved as a suburb name in 1982.The stone church to the rear of the brick building that fronts the street was built in 1898. It was a church for the Church of Christ. The Metropolitan Water Supply Survey plan dated 1949 shows a brick portion with no setback, and a stone section behind (to the west) indicating the brick addition was built before that. The stone church of a more traditional ecclesiastical architecture can be seen from the south side of the building from Lake Street, and from the car park off Aberdeen Street.
A hospitality company Entertainment Enterprises bought the property in October 1983, when it was Hannibal's Nightclub. It was later called Havana's, The Church, and most recently the Library nightclub. The building was sold in 2017 for $4.8 million to Yusuf Khan, 27, businessman who is the sole director of Perth City Investments Pty Ltd, the company behind the purchase. He bought it with the intention to build a multi-story development in the future.
In June 2019, punters of the Library nightclub were lucky to escape without injury after parts of its outside wall collapsed as a party was being held at the busy venue on Saturday night.

HISTORY

West Perth developed as suburban residential area in the late 1890s. From its inception it had the characteristics of a quality neighbourhood. Proximity to the city centre and Kings Park (then known as Perth Park), and the elevated location provided healthy site drainage as well as cooling breezes and views over the city and hills. The area had social status already associated with addresses in nearby Mount Street and access to the city's piped water system.
The area was subdivided into large residential lots for development and proceed accordingly. The homes built in West Perth from the early 1900s included prestigious mansions built in prominent locations and smaller working class cottages in the narrower back streets and towards the northern end of the area adjacent to the railway.
Lawrence Avenue was originally called Colin Place and then Colin Crescent. The 1897 Perth Town Plan shows no houses on this road at the time. There was also no Prowse Street and this general area was not developed with housing. The Post Office Directory shows Colin Place being named in 1898. Prowse Street was originally called Colin Crescent and for a time Colin Place was deemed part of Colin Crescent. A row of four pairs of identical brick semi-detached houses was built in 1900. The numbers were at first simply 1-8. Then numbers changed and Colin Place was also called Colin Crescent at times.
No. 6-8 was earlier No. 12-14. Numbering became the current formation in 1908.The Metropolitan Water Supply Survey plan dated 1916 shows a row of four pairs of identical brick semi-detached houses with full length front verandahs, and attached galvanised iron laundry, bathroom and toilets extending from the rear of the house to

the rear boundary fence. The properties backed onto Mallabones, a leather goods manufacturer, established 1898 in Perth.

HISTORY

West Perth developed as suburban residential area in the late 1890s. From its inception it had the characteristics of a quality neighbourhood. Proximity to the city centre and Kings Park (then known as Perth Park), and the elevated location provided healthy site drainage as well as cooling breezes and views over the city and hills. The area had social status already associated with addresses in nearby Mount Street and access to the city's piped water system.
The area was subdivided into large residential lots for development and proceed accordingly. The homes built in West Perth from the early 1900s included prestigious mansions built in prominent locations and smaller working class cottages in the narrower back streets and towards the northern end of the area adjacent to the railway.
Lawrence Avenue was originally called Colin Place and then Colin Crescent. The 1897 Perth Town Plan shows no houses on this road at the time. There was also no Prowse Street and this general area was not developed with housing. The Post Office Directory shows Colin Place being named in 1898. Prowse Street was originally called Colin Crescent and for a time Colin Place was deemed part of Colin Crescent. A row of four pairs of identical brick semi-detached houses was built in 1900. The numbers were at first simply 1-8. Then numbers changed and Colin Place was also called Colin Crescent at times.
No. 10-12 was earlier No. 16-18. Numbering became the current formation in 1908.The Metropolitan Water Supply Survey plan dated 1916 shows a row of four pairs of identical brick semi-detached houses with full length front verandahs, and attached galvanised iron laundry, bathroom and toilets extending from the rear of the

house to the rear boundary fence. The properties backed onto Mallabones, a leather goods manufacturer, established 1898 in Perth.

WESTERN AUSTRALIAN HISTORIC THEME

1. Demographic settlement and mobility - 104 Land allocation and subdivision
3. Occupations - 306 Domestic activities

AUSTRALIAN HISTORIC THEME

4.Building Perth (Settlements & Cities) - 4.1.2 Making suburbs
4.Building Perth (Settlements & Cities) - 4.6 Remembering significant phases in the development of Perth

Lawrence Avenue was originally called Colin Place and then Colin Crescent. The 1897 Perth Town Plan shows no houses on this road at the time. There was also no Prowse Street and this general area was not developed with housing. The Post Office Directory shows Colin Place being named in 1898. Prowse Street was originally called Colin Crescent and for a time Colin Place was deemed part of Colin Crescent. No. 15 Lawrence Avenue was originally No. 31 and then No. 13. It was built in 1899 with the first occupant being John Cameron, contractor. This was the first building on the street. Numbering changed from 13 to 15 in the late 1920s. The house is built in the Federation Anglo-Dutch style of architecture, evident in the curved gable and the round ventilator window.

The Metropolitan Water Supply Survey plan dated 1916 shows a brick house with a half-length front verandah and a cemented front yard. Next to it on the north side was a vacant block, and on the south side was a small brick outbuilding, which was the rear yard of No. 12 Duoro Place. At 2021, the house is used as an office.

Lawrence Avenue was originally called Colin Place and then Colin Crescent. The 1897 Perth Town Plan shows no houses on this road at the time. There was also no Prowse Street and this general area was not developed with housing. The Post Office Directory shows Colin Place being named in 1898. Prowse Street was originally called Colin Crescent and for a time Colin Place was deemed part of Colin Crescent. The house at No. 19 was built in 1902 in the Federation Queen Anne style of architecture. A long-term resident was the Ward family who were there until c. 1925. The Metropolitan Water Supply Survey plan dated 1916 shows a substantial brick house on a triangular lot, with a corner truncated entrance, a projecting bay to Lawrence Avenue and a half-length front verandah. There was a brick building, possibly a garage, on the Prowse Street boundary. At 2022, the house is used for commercial use/health services. It appears to have had a recent refurbishment which has

impacted the original fabric. The brick walls have been rendered and struck to appear as limestone blocks. There is a new roof, metal decorative frieze (not original or inkeeping with the style) and the verandah is tiled.

HISTORY

West Perth developed as suburban residential area in the late 1890s. From its inception it had the characteristics of a quality neighbourhood. Proximity to the city centre and Kings Park (then known as Perth Park), and the elevated location provided healthy site drainage as well as cooling breezes and views over the city and hills. The area had social status already associated with addresses in nearby Mount Street and access to the city's piped water system.
The area was subdivided into large residential lots for development and proceed accordingly. The homes built in West Perth from the early 1900s included prestigious mansions built in prominent locations and smaller working class cottages in the narrower back streets and towards the northern end of the area adjacent to the railway.
Malcolm Street was settled as a residential street from the 1890s.
Only the southern side of the street was settled with houses having views over the Parliament House site and the Barracks. Around the turn of the century the Public Works Department took over the colonial built barracks and developed the site with a conglomeration of utilitarian structures. Circa 1930 Kings Park Road was upgraded but Malcolm Street remained a narrow suburban street (66ft wide) and something of a bottleneck between St. Georges Terrace and the widened Kings Park Road. As a result, a strip was excised from the Parliament House site for road widening. The Post Office Directory first lists No. 23 Malcolm Street in 1926, with the occupant as Mrs R. A. Jones. The two-storey house is built in the Federation Art and Crafts style of architecture.

The Metropolitan Water Supply Survey plan dated 1953 shows a brick house to the western side of a large lot, with the eastern side given over to a large expanse of lawn. There was a driveway on the easter boundary leading to a garage at the very rear corner of the lot.
In the late 1960s the Freeway development necessitated the demolition of most of the Barracks and the houses from 3-11 Malcolm Street. No. 23 was reduced in lot size and remained as the easternmost house on the south side of Malcolm Street, adjacent to the Freeway. There is a high face brick wall to the front boundary that obscures views of those house.

WESTERN AUSTRALIAN HISTORIC THEME

1. Demographic settlement and mobility - 104 Land allocation and subdivision
3. Occupations - 306 Domestic activities

AUSTRALIAN HISTORIC THEME

4.Building Perth (Settlements & Cities) - 4.1.2 Making suburbs
4.Building Perth (Settlements & Cities) - 4.6 Remembering significant phases in the development of Perth
8. Developing Australia's Cultural Life - 8.10.4 Designing & building fine buildings
8. Developing Perth (Australia's) Cultural Life - 8.12 Living in and around Australian homes

STATEMENT OF SIGNIFICANCE

The place has historic and aesthetic significance as a substantially intact, two storey house built in 1926.
It is a rare example of a Federation Art and Crafts style house built in the Inter-War period at a time when Malcolm Street was residential in character.

NATURE OF SIGNIFICANCE

HERCON Value A - Its importance in demonstrating the evolution or pattern of Perth's history

The place has historic significance as a substantially intact, two storey house built in 1926.

HERCON Value B - Its importance in demonstrating rare, uncommon or endangered aspects of Perth's heritage

It is a rare example of a Federation Art and Crafts style house built in the Inter-War period at a time when Malcolm Street was residential in character.

HERCON Value C - Its potential to yield information that will contribute to an understanding of Perth's history

HERCON Value D - Its importance in demonstrating the characteristics of a broader class of places

HERCON Value E - Any strong or special meaning it may have for any group or community because of social, cultural or spiritual associations

HERCON Value F - Its importance in exhibiting particular aesthetic characteristics valued by any group or community

The place has aesthetic significance as a substantially intact, two storey house built in 1926.

HERCON Value G - Any special association it may have with the life or work of a person, group or organization of importance in Perth's history
HERCON Value H - Its importance in demonstrating a high degree of creative or technical achievement
HERCON Value I - Any HERCON Value I - Any other characteristic it may have that in the opinion of the decision making body is relevant

CONDITION AND AUTHENTICITY

Condition	Good
Building Fabric Authenticity	High. Largely as originally constructed with detail intact.

CLASSIFICATION OF SIGNIFICANCE

Considerable – Category 2 - Very important to the heritage of the locality.

HISTORY

Malcolm Street was settled as a residential street from the 1890's. Only the southern side of the street was settled with houses having views over the Parliament House site and the Barracks. Around the turn of the century the Public Works Department took over the colonial built barracks and developed the site with a conglomeration of utilitarian structures. Circa 1930 Kings Park Road was upgraded but Malcolm Street remained a narrow suburban street (66ft wide) and something of a bottleneck between St. George's Terrace and the widened Kings Park Road. As a result, a strip was excised from the Parliament House site for road widening. House built for James and Edith Cowan in 1893 and was designed by Robert Thompson McMaster who designed other houses around Kings Park. Edith Cowan lived there from 1893-1896 when they moved to Cottesloe and rented the house out. In 1899 the house was rented to another tenant and it was used as a boarding house. The family moved back to the house in 1912-1919 when Edith was becoming active in social works and committees. The house was sold to Samuel James Phillips in 1919. The Cowan's moved to No 71 where she lived until her death in 1932. The house was divided into two flats in 1920 and continued in this format in the 1940s and 1950s. The house was owned by James and Rose Skinner, patron of the arts, from

1955. The two flats were converted into offices. They constructed the Skinner Gallery at the property which was opened in 1958. This gallery was prominent in the art world in Perth in the 1960's and 70's.

WESTERN AUSTRALIAN HISTORIC THEME

3. Occupations - 307 Domestic activities
4. Social & civic activity - 401 Government & politics
4. Social & civic activity - 407 Cultural activities
6. People - 602 Early settlers
6. People - 605 Famous people & infamous people

AUSTRALIAN HISTORIC THEME

7. Governing - 7.2.3 Working to promote civil liberties
7. Governing - 7.2.4 Forming political associations
8. Developing Perth's Cultural Life - 8.7 Honouring achievement
8. Developing Perth's Cultural Life - 8.10.2 Creating visual arts
8. Developing Perth's Cultural Life - 8.10.4 Designing & building fine buildings
8. Developing Perth's Cultural Life - 8.13 Living in cities & suburbs

STATEMENT OF SIGNIFICANCE

The place has close associations with Edith Cowan, the first woman member of an Australian parliament, and her husband, James Cowan, for whom the place was constructed, and who resided there at various times.
The place has close association with Rose and Josiah Skinner, for whom the additional building was constructed in 1958, and who established the Skinner Gallery there, which was a leader in encouraging and promoting modern Australian art in the late 1950s and 1960s.
The Skinner Gallery was one of the first purpose designed and built, privately run art galleries in Australia and the first in Western Australia.
Although denuded of some of its architectural detail, the house retains many of the characteristics of a Victorian Rustic Gothic style house and does so in a manner which allows it to be a fine, distinctive remnant of the style.
The ground floor of the gallery building contains the brightly lit and elegantly simple space of the gallery at the lower or ground floor level.
The place has minor landmark quality in Malcolm Street.

NATURE OF SIGNIFICANCE

HERCON Value A - Its importance in demonstrating the evolution or pattern of Perth's history

The Skinner Gallery was one of the first purpose designed and built, privately run art galleries in Australia and the first in Western Australia.

HISTORY

Stable originally associated with a large residence, Malia House, in West Perth. The stables were built around 1900 at the rear of the property which fronted Colin Street. The house which was on the property would have been built around 1900 as well. At this time Mayfair Street was known as May Street. In the 1960s many larger houses in West Perth were converted for office use or demolished for purpose built commercial buildings. The house was demolished and the Aston Clinic constructed in the late twentieth century. The clinic was subsequently demolished and the area was developed by Homeswest. The stables are one of very few remaining outbuildings in the City of Perth.

HISTORY

Until the 1880's the town centre was characterised by the establishment of small cottages, shops and small businesses and was rural in character. The expansion of commerce following the discovery of gold in the 1890's put pressure on land in the centre of Perth with the result that most residential uses were displaced in favour of commercial development.
During the 1890's and early 1900's the centre of Perth was substantially rebuilt. The period of expansion in Perth coincided with a period of economic depression in the eastern states, in particular Victoria. As a result, there was substantial migration from Victoria to WA. This migration included businessmen, architects and builders, all of whom had a considerable influence on the development of the city. Hay Street was established along with St. George's Terrace and Murray Street, as one of the main streets of Perth from the time of settlement in 1829. It remained a major commercial street throughout the twentieth century and for most of that time was characterised by traffic, including trams. The character of the street changed after it became a mall in the 1970's. Example of a commercial building constructed in Perth during the period of expansion and development that followed the gold rush of the 1890's.
The facade was retained and the building was demolished behind it in 2003.

HISTORY

The 1897 Perth Town Lot does not show a building of the formation currently at No. 26 Milligan Street. It is difficult to date the construction through Post Office Directories, but No 26A was originally No. 34A, and this was listed by 1915; whether in the form of the current building is not determined. It was occupied by Vincent and Dalglish, electrical engineers. In the 1920s the section of Milligan Street between Hay and Murray Streets on both sides were businesses mostly catering to the motor vehicle industry: motor trimmers (upholsterers), car sales yards, garages and the like. In 1920, No. 34 was City Motor Garage. In 1928, the E.S. & A. Bank (ANZ Bank) was built on the corner. The adjacent No. 34A was occupied by W. Everett motor trimmer, and upstairs was H. Roach, bootmaker.
The Metropolitan Water Supply Survey plan dated 1939 shows little detail. The building adjoins No. 40 to the north and No. 938-940 Hay Street to the south. In 1940, the building is listed as Nos. 26-30 as Everett's business, and No. 34A was Melbourne Car Sales, a used car sales business. By 1949 Everett's business is Nos. 26-34. Now No. 26, the two storey commercial building has a recent shop front at street level. The awning is not original. The facade is intact at first floor level with four engaged classical columns; two double hung sash windows; extensive decorative stucco work to the window sills, and the central bay.

WESTERN AUSTRALIAN HISTORIC THEME

STATEMENT OF SIGNIFICANCE

The place is of aesthetic significance as an example of a Federation Free Classical style building constructed during the period of economic affluence and increased development that followed the gold boom.
It contributes to the streetscape as part of a group of similar buildings located at the intersection of Hay and Milligan Streets.

NATURE OF SIGNIFICANCE

HERCON Value A - Its importance in demonstrating the evolution or pattern of Perth's history

The place was constructed during the period of economic affluence and increased development that followed the gold boom.

HERCON Value B - Its importance in demonstrating rare, uncommon or endangered aspects of Perth's heritage

HERCON Value C - Its potential to yield information that will contribute to an understanding of Perth's history

HERCON Value D - Its importance in demonstrating the characteristics of a broader class of places

HERCON Value E - Any strong or special meaning it may have for any group or community because of social, cultural or spiritual associations

HERCON Value F - Its importance in exhibiting particular aesthetic characteristics valued by any group or community

The place is of aesthetic significance as an example of a Federation Free Classical style building. It contributes to the streetscape as part of a group of similar buildings located at the intersection of Hay and Milligan Streets.

HERCON Value G - Any special association it may have with the life or work of a person, group or organization of importance in Perth's history

HISTORY

The 1897 Perth Town Lot does not show a building of the formation currently at No. 41 Milligan Street. The 1920s in Perth was characterised by economic prosperity and expansion. There was considerable migration from Britain and Europe encouraged by government sponsored settlement schemes leading to a period of consolidation in the city. There was continued commercial development including the construction of arcades, hotels and commercial buildings. In the 1920s the section of Milligan Street between Hay and Murray Streets on both sides were businesses mostly catering to the motor vehicle industry: motor trimmers (upholsterers), car sales yards, garages and the like. The 1929 Post Office Directory lists 'New Building' between No. 39 and No. 47 Milligan Street. The following year it is occupied by Perth Car Sales, with N. S. Cohen as manager. The place continued to be a car sales yard, later called Milligan Car Sales, up to at least 1949.
The State Library of WA holds a 1929 photograph of the building when first built. (014425PD). It shows a two-storey commercial building with a stepped parapet concealing the roof, vertical pilasters and late metal framed windows; both casement and hopper style. There is a suspended awning over the pavement, a customer entry on the south end, a wide entrance driveway on the north end, and a glazed shopfront to view cars on the shop floor.
The Metropolitan Water Supply Survey plan dated 1939 shows little detail; just a long brick building that extends to the rear of the lot.
The building was later a car rental outlet, with a martial arts school on the upper floor.

Archaeology	
Physical Description	

Pearl Villa is a two-storey face brick and iron building in the Victorian Regency style that was constructed in 1887 by Joseph Clarkson. It was used as private residential rental premises until 1930, when the two-storey Hostel Milligan was constructed to the two street frontages. Two storey commercial building in the Art Deco style, with truncated corner addressing the intersection of Murray and Milligan Streets. Simple detail with parapet, rectangular windows, vertical emphasis with pilasters extending above the parapet. Loss of original detail at street level. Awning not original.

Walls 1 Material	Brick - Rendered
Walls 2 Material	
Roof Material	Metal - Corrugated Iron
Architect	
Builder	Jesse Hammond; Joseph Clarkson; William Molloy
Other Associations	

HISTORY

By 1852 Milligan Street had been surveyed and sold. Joseph Clarkson bought part of the property in 1886. The Gold Boom in the 1880s resulted in an increased population and development in Perth. At this time the were some large houses in the area, but mainly small cottages and vacant land. Pearl Villa, a two-storey brick house, was constructed in 1887.The ownership changed in 1889 with J S Christie noted as the resident, with Clarkson remaining as the owner until his death in 1890. The Christie family lived at the property for twenty years. In 1911 Otto Hermann was listed as the resident until 1913. In 1930 plans were drawn for a new building with shops on the ground floor and accommodation on the first floor, also incorporating Pearl Villa into a hostel. The hostel was an alternative to boarding houses and was a reasonably priced alternative to flats that were already built in Perth. The popularity of affordable flats continued into the 1940s. The hostel continued operating into 2010s with many long-term residents.

Architectural Style 1 Specific	Functionalist
Architectural Style 2 General	Inter-War (c.1915-c.1940)
Architectural Style 2 Specific	Art Deco
Archaeology	
Physical Description	

The building was built entirely out of fire-resistant materials, with brick walls, steel and concrete floors finished with a granolithic surface, corrugated asbestos roof sheeting and steel window frame. The building was surfaced externally with white cement and white sand and incised to give a stonework effect. The only woodwork in the building was in the fittings and smaller doorways.
The place features symmetrical massing, simple geometric shapes, continuous ribbon metal framed windows, rendered wall surfaces, prominent rounded corners and the roof structure is concealed by a parapet. The site slopes quite steeply northward down towards Wellington Street, allowing a lower floor with entrance for vehicles at that level. There are three levels in all with the mid-level floor having access directly from Milligan Street. From there the original upper floor vehicle access was by short carefully graded ramps each side of the building at the apex of the triangle. A feature of the building structure was the absence of internal supporting pillars on the upper floor where the roof trusses reached from wall to wall over a span of approximately 104 feet (914 metres), which was at that time one of the largest roof spans in the State. The roof above this structure is of the ‘saw tooth type’ hidden behind a deco stepped parapet.
A prominent feature of the building was a large Art Deco electric clock that projects above the south facing parapet and was visible from Hay Street. The clock has now been replaced with a large advertisement hoarding. The external walls have recessed bands which originally linked the fenestration to give the effect of ribbon windows, emphasising the horizontal elements of the building. These windows have now been deepened, so that the recessed bands no longer coincide with the sills. The exterior of the building is currently painted cream with blue and red bands that further emphasise the horizontal emphasis of the design. The service station originally incorporated into the Southern apex of the triangular site, could be approached by car through different entrances at the mid-level, thus avoiding congestion.
All levels were fully trafficable. The office and showroom were located behind the service station. These entrances and the service station are now replaced with a reception lobby behind modern plate glass doors forming the main entrance and which is approached by semi-circular steps. This lobby provides access to the open plan offices on the first and second floors. The original three large openings at street level on the Wellington Street façade continue to provide direct access into the lower floor of the building by motor car.

Walls 1 Material	Brick

Walls 2 Material	Brick - Rendered

Architect	W.G Bennett & Messers Powell; Cameron & Chisholm
Builder	Missen and Mills
Other Associations	

HISTORY

Originally built as a garage, service station and engineering workshop for Messers Courthope and Olifent, the place was the first multi-level car park built in Western Australia. The site was previously occupied by St John's Church, which was demolished under protest in order to construct Motor House. Much of the furniture and fittings from the church were incorporated into the 1930s Church of St. Peter, Victoria Park.

4. Building Perth (Settlements & Cities) - 4.6 Remembering significant phases in the development of settlements, towns and cities
8. Developing Perth's Cultural Life -8.10.4 Designing & building fine buildings
8. Developing Perth's Cultural Life -8.10.5 Advancing knowledge in science & technology

STATEMENT OF SIGNIFICANCE

The place is a fine representative example of an early Moderne style building (also described as Inter-War Functionalist).
The place has characteristic Art Deco stylistic elements and is a competent design interpretation that represents an important stage in the development of modern architecture in Western Australia.
The place has landmark qualities and prominence in the city streetscape due to its simple geometric shapes and prominent rounded corners that proclaim its modernity, together with the space around it.
The place represents a key stage in the development of modern architectural history in Western Australia and reflects the establishment of facilities for the advent of motor vehicles in the city of Perth.
Its prominent position fronting the major intersection of Milligan Street and Wellington Street marks it significant place in the historical development of the central business district perimeter and the provision of facilities for the housing, servicing and maintenance of the motor vehicles of the city business people.
The place was the first multi-story structure in Western Australia to be designed and constructed specifically to service the motor car. The place demonstrates a degree of structural engineering innovation and achievement. It was a novel development in the city at the time and incorporated what was then the largest clear span roof in the State.
The place is a unique and rare distinctive example of a 1930s building designed in the modern style and was the first and only multi-level car parking facility in Western Australia.
The place is unusual, being different in style to other buildings sin the City of Perth and represents the only example of a metropolitan CBD structure design by this collaboration of well-known architects.
The place is one of only a few Moderne buildings still standing.

NATURE OF SIGNIFICANCE

HERCON Value A - Its importance in demonstrating the evolution or pattern of Perth's history

The place represents a key stage in the development of modern architectural history in Western Australia and reflects the establishment of facilities for the advent of motor vehicles in the city of Perth.

HISTORY

Narrows Bridge is important in the history of the development of the City of Perth. In 1849 an article which proposed a bridge to be built at the Narrows was published in The Inquirer. This would provide a more direct route between Perth and Fremantle, rather than the route via the Causeway. Proposals for a bridge continued into the twentieth century. The bridge is the first physical manifestation of the Hepburn and Stephenson Plan, which contributed to the Freeway Road system in the State and the Perth Metropolitan Region Scheme from the 1950s. Construction on the bridge began in 1957 and it was completed in 1959. In 1998 the Narrows was widened and a train line constructed in the middle of the two spans.

8. Developing Perth's Cultural Life - 8.7 Honouring achievement
8. Developing Perth's Cultural Life - 8.9 Commemorating significant events
8. Developing Perth's Cultural Life - 8.10.5 Advancing knowledge in science & technology

STATEMENT OF SIGNIFICANCE

The place is a strong landmark element of the visual landscape which comprises the built form of the City and the Narrows Bridge and the natural form of the river and Mt Eliza.
This same visual resolution is apparent during the day and at night-time in the context of an illuminated City and Bridge.
The place is the first physical manifestation of the Hepburn and Stephenson plan, which contributed to the development of the Freeway road systems in the State and the Perth Metropolitan Region Scheme from the 1950s.The pre-stressed concrete structure is representative of innovative engineering technology and method developed in the 1950s. The construction involved structural design, techniques and materials appropriate to a low-profile structure in a visually, critical location with difficult foundation characteristics.
The place has associations with eminent consulting engineers, Maunsell & Partners in the U.K. and consulting architects, Sir William Holford and Partners in the U.K., as an element of the Stephenson-Hepburn Report of the 1950s which emphasised the need for aesthetic consideration to be incorporated into the design of the Bridge.
The place contributes to the community's sense of place as an element in the landscape of the City.

NATURE OF SIGNIFICANCE

HERCON Value A - Its importance in demonstrating the evolution or pattern of Perth's history

The place is the first physical manifestation of the Hepburn and Stephenson plan, which contributed to the development of the Freeway road systems in the State and the Perth Metropolitan Region Scheme from the 1950s.

HISTORY

In 1954 landscape architect John Oldham developed a concept for the unification and continuity of parkland reserved around Perth water and adjacent shores of the Swan River at Burswood Island and Mounts Bay Road. When the Narrows Bridge was built in the late 1950s and Mounts Bay was filled in to carry the Narrows Interchange, there was public outrage at the disaster to the cityscape. According to Oldham's design, the

interchange was to be covered in plants, and flyovers were to be constructed on earth banks. It is perhaps the first freeway interchange conceived as a public park. Some fountains and gardens from the original plan did not proceed. The existing plantings and other details including native and exotic plants are executed in the romantic landscape tradition.

HISTORY

The establishment of parks was closely linked to wealth with the result that Perth did not begin to develop a comprehensive system of parks until after the goldrushes of the 1890's. The reserve was known as St Georges Terrace Reserve and was probably laid out by City Gardener John Braithwaite. It had a simple geometric layout including trees, hedges, fences and shrubs which enclosed the park. Paths led to the statue of Alexander Forrest, erected in 1913, which was relocated to the corner of St Georges Terrace and Barrack Street in 1916. Public debate on the lack of park land in Perth was voiced in editorials in the newspapers between 1875 and 1886. The provision of a network of parklands in central Perth and around the river were the themes central to these concerns. In 18912/1913 the fences were removed from this and other parks around Perth.
In 1961 the McNess Memorial fountain was relocated to the reserve from Stirling Gardens due to potential damage when a proposal for a new town hall was to be located in Stirling Gardens in the 1950s and early 1960s. It was renamed Florence Hummerston Reserve in 1970 in honour of the first female councillor of the City

of Perth. She played an active role in organisations which looked after the welfare of women and children. The reserve was redesigned in the 1980s in a more informal style.

McNESS MEMORIAL
Charles McNess C.B.
1854 - 1938
Lady McNess
died 1937
Sir Charles arrived in Perth in March 1876 from the UK
A successful businessman operating on the corner of
Barrack and Hay Streets, he was a mainly
general Ironmonger and purveyor of building requisites.
He built a modern brick building on this site -
the McNess Royal Arcade.
A compassionate man, he donated about $300,000
to WA charities during his lifetime.
Particular support was given to Perth's
unemployed during the 1930's.
A loyal citizen and generous
public benefactor.
Was Knighted in 1931
PLAQUE ERECTED DECEMBER 1936

HISTORY

Mount Street appeared on the first statutory plan of Perth prepared by A. Hillman and signed by Governor John Hunt in 1845, however, it was not established and settled until much later. West Perth developed as suburban residential area in the late 1890s. From its inception it had the characteristics of a quality neighbourhood. Proximity to the city centre and Kings Park (then known as Perth Park), and the elevated location provided healthy site drainage as well as cooling breezes and views over the city and hills. The area had social status associated with addresses in Mount Street and access to the city's piped water system.
Mount Street was characterised by large, often architect designed, mansions. Some of these were converted to flats in the 1950s -1970s, and there were also a number of apartment blocks constructed in this period. Mount Street has always been an extremely prestigious address and has included embassies and homes of prominent families and notable individuals in the context of the history of the city and the state.
In 1930 the Post Office Directory lists ‘Robertson Bros, Flats’ at No. 40 Mount Street. The Robertson Brothers were real estate agents at the time. The development was purchased for $7,500 in 1929 by Mr. W. D. Mathieson. He sold it in 1934 by which time it was called Ettamogah Flats and comprised of four flats over two stories.
Between 1939 and 1940, the flats were redeveloped and then comprised 34 flats in a U shape, and up to five storeys.

HISTORY

Mount Street appeared on the first statutory plan of Perth prepared by A. Hillman and signed by Governor John Hunt in 1845, however, it was not established and settled until much later. Mount Street developed, along with West Perth generally, in the late 1890's and early 1900's. The elevated position made the area prime real estate and the area was characterised by large, often architect designed, mansions. Mount Street has always been an extremely prestigious address and has included embassies and homes of prominent families and notable individuals in the context of the history of the city and the state. The house was built in 1892 for Everard Firebrace Darlot and designed by John Talbot Hobbs.
Darlot was a pastoralist and owned stations in the Mid- West. He was the Member for the Legislative Assembly for Murchison. In 1910 Ernest and Bridget Lee Steere bought the property. Lee Steere had a business hauling goods and ore and also established a station near Meekatharra. The house was rented from the 1920s as the Lee Steere's moved to Toodyay. In the 1960s the house was used as a hotel. Some of these large houses were converted to flats in the 1950's, 60's & 70's, and there were also a number of apartment blocks constructed in

this period. The family sold it in 1975. During the 1970s it was owned by the Anglican Church which operated health and community services from it. The property was subdivided and sold, while the house was retained by the Anglican Church. The house was restored and used as the official residence of the Anglican Archbishop.

STATEMENT OF SIGNIFICANCE

The place is a fine example of a two-storey limestone and brick residence in the Federation Queen Anne style; the place was built during the gold boom years in Western Australia as one of the first substantial residences in the Mount Street precinct, and remains an impressive aesthetic statement in the street.
The place was designed by prominent Perth architect John Talbot Hobbs and is typical of his high level of artistic achievement applied to a residential building.
The place was owned and occupied by significant individuals in the history of Western Australia, including Everard Firebrace Darlot and his family and the Lee Steere family, and has been the residence of the serving Anglican Archbishop of Perth since 1986.
The place demonstrates a distinctive time in the development of the City of Perth and a type of development that is becoming less common with the promotion of more intensive urban development.
The place contributes to the community's sense of place as an aesthetically striking residence in an inner city location, and as a reminder of the peak years in the residential development of central Perth.

NATURE OF SIGNIFICANCE

HISTORY

Mount Street appeared on the first statutory plan of Perth prepared by A. Hillman and signed by Governor John Hunt in 1845, however, it was not established and settled until much later. West Perth developed as suburban residential area in the late 1890s. From its inception it had the characteristics of a quality neighbourhood. Proximity to the city centre and Kings Park (then known as Perth Park), and the elevated location provided healthy site drainage as well as cooling breezes and views over the city and hills. The area had social status associated with addresses in Mount Street and access to the city's piped water system. Mount Street was characterised by large, often architect designed, mansions. Some of these were converted to flats in the 1950s - 1970s, and there were also a number of apartment blocks constructed in this period. Mount Street has always been an extremely prestigious address and has included embassies and homes of prominent families and notable individuals in the context of the history of the city and the state.

A two-storey semi-detached residence at No. 60-62 Mount Street was built c. 1890 in the Federation Filigree style. The two residences were not a mirrored pair, with No 62 having a bay window, and No. 60 having a truncated corner projecting bay.

No. 60 was demolished in the late 1990s, and replaced by a high rise apartment block, which has reduced the integrity of No. 62.

Heritage Place Record Form

HISTORY

Mount Street appeared on the first statutory plan of Perth prepared by A. Hillman and signed by Governor John Hunt in 1845, however, it was not established and settled until much later. Mount Street developed, along with West Perth generally, in the late 1890's and early 1900's. The elevated position made the area prime real estate and the area was characterised by large, often architect designed, mansions. Mount Street has always been an extremely prestigious address and has included embassies and homes of prominent families and notable individuals in the context of the history of the city and the state.
The house was built for Frederick Francis Burdett Wittenoom in the late 1890s and early 1900s. Wittenoom was a pastoralist and explorer and was a member of the Weld Club. He and his brother opened up the Murchison region. The house was inherited by Wittenoom's nephew Edward Lefroy and it was held by the Lefroy family until 1987.Lord McAlpine bought the property in 1987 and carried out a large restoration. It is still used as a residence.

The area had social status associated with addresses in Mount Street and access to the city's piped water system. Mount Street was characterised by large, often architect designed, mansions. Some of these were converted to flats in the 1950s - 1970s, and there were also a number of apartment blocks constructed in this period. Mount Street has always been an extremely prestigious address and has included embassies and homes of prominent families and notable individuals in the context of the history of the city and the state. Prior to the 1940 apartments, Mr Frank Wittenoom lived at this location (address 63 Mount Street). The apartment block 'Wittenoom Apartments' at 65 Mount Street was designed by prominent Perth architect Marshall Clifton. The building was extensively altered and extended in 1982 and at 2021 contains 11 apartments.

HISTORY

Mount Street appeared on the first statutory plan of Perth prepared by A. Hillman and signed by Governor John Hunt in 1845, however, it was not established and settled until much later. West Perth developed as suburban residential area in the late 1890s. From its inception it had the characteristics of a quality neighbourhood. Proximity to the city centre and Kings Park (then known as Perth Park), and the elevated location provided healthy site drainage as well as cooling breezes and views over the city and hills. The area had social status associated with addresses in Mount Street and access to the city's piped water system.
Mount Street was characterised by large, often architect designed, mansions. Some of these were converted to flats in the 1950s -1970s, and there were also a number of apartment blocks constructed in this period. Mount Street has always been an extremely prestigious address and has included embassies and homes of prominent families and notable individuals in the context of the history of the city and the state.
The home at 69 Mount Street was built in 1897 for John Hopgood. It was occupied by John Andrew Muir, Inspector of Engineering Surveys from 1899 to 1913. The firm Hobbs, Smith and Forbes, Architects designed additions in 1913 and Sir Walter Hartwell James and Lady Eleanora James occupied the property from 1914-

1942. James was one of Western Australia's leading social reformers, an important and influential figure in the federal movement in Western Australia, a barrister, Perth City councillor, Premier from 1902 to 1904, Attorney-General and Chancellor of the University of WA Premier. Lady James was a prominent feminist and notable social worker. The Metropolitan Water Supply Survey plan dated 1965 shows a garage at the corner of Cliff and Mount Street, and that the large house has a basement. In 1986, alterations and additions were undertaken by architects Overman & Zuideveld. In 2000 the place was added to the State Register (Interim Entry 24/11/2000) and was removed 16/11/2001. The assessment documentation is available on inHerit. Refer to this for a full history.

WESTERN AUSTRALIAN HISTORIC THEME

1. Demographic settlement and mobility - 107 Settlements
3. Occupations - 306 Domestic activities
6. People - 605 Famous and infamous people

AUSTRALIAN HISTORIC THEME

4.Building Perth (Settlements & Cities) - 4.1.2 Making suburbs
4.Building Perth (Settlements & Cities) - 4.6 Remembering significant phases in the development of Perth
8. Developing Australia’s Cultural Life - 8.10.4 Designing & building fine buildings
8. Developing Perth (Australia's) Cultural Life - 8.12 Living in and around Australian homes

STATEMENT OF SIGNIFICANCE

The place is highly significant for its association with Sir Walter Hartwell James KC, KCMG, one of Western Australia's leading social reformers, an important and influential figure in the federal movement in Western Australia, Premier and Attorney-General, and leading Western Australian barrister; and with his wife, Lady James, a prominent feminist and notable social worker.
The place contributes to the aesthetic qualities of the south-west corner of Mount and Cliff Streets, in particular the rear view of the house with its distinctive rear facade from the look-out at the top of Jacob's Ladder.
The place has strong associations with John Andrew Muir, Inspector of Engineering Surveys, who resided there from 1899 to 1913.
The place has associations with the firm of Hobbs, Smith & Forbes, Architects, J. J. Talbot Hobbs and W. J. Waldie Forbes, who designed the 1913 additions; and with Architects, Overman & Zuideveld, who designed the 1986 alterations and additions.
The place exhibits the characteristics of a quality built single residence constructed for a relatively affluent owner during the Western Australian Gold Boom in the late nineteenth century, and subsequently extended in the pre-World War I period with additions of a similar standard, with subsequent changes to the fabric also demonstrating the aspirations, and the economic and social standing of the owners and occupiers through time.
The exuberant additions in the Federation Queen Anne style, designed by Hobbs, Smith and Forbes, Architects, have high aesthetic value.

NATURE OF SIGNIFICANCE

HERCON Value A - Its importance in demonstrating the evolution or pattern of Perth’s history

The place exhibits the characteristics of a quality built single residence constructed for a relatively affluent owner during the Western Australian Gold Boom in the late nineteenth century, and subsequently extended in the pre-World War I period with additions of a similar standard, with subsequent changes to the fabric also demonstrating the aspirations, and the economic and social standing of the owners and occupiers through time.

HISTORY

Mounts Bay Road extends from Winthrop Avenue, Crawley to William Street, Perth. It follows the foreshore around the base of Mt Eliza. The eastern end between Point Lewis Rotary and William Street is now considerably inland, due to the extensive landfill for the Narrows Bridge and freeway in the late 1950s. It is a picturesque drive along the Swan River with little development along it, due to the river on one side and the steep cliffs of Mount Eliza on the other. Mounts Bay Road is a Registered Aboriginal Site (ID3787) with Mythological significance as well as a Camp, Named Place, and a Water Source. The location of the former Swan Brewery is a significant site called Kooyamulyup. It was a favoured camping ground, being near to the fresh water spring Goonininup (Kennedy's Fountain), and on the foreshore where an abundance of food and other resources were readily available.
Also over the Mounts Bay Road area is another Registered Aboriginal Site (ID3704) called Kings Park Waugal (Ceremonial, Mythological, Plant Resource, Water Source). The natural spring is associated with the Waugal and its creation journey that made the rivers and waterways. The Derbal Yerrigan (Swan River) is also a Registered Site (ID3536) (Mythological).
After colonisation, this area was claimed for a mill. A convict depot was built in the 1850s near Kennedy's Fountain, and the Swan Brewery relocated in 1879 to land just to the west. The land has been reclaimed over

time to the large complex that is there today, on both sides of the road. (Refer to an 1897 plan held at State Library of WA, 578C/2).
One notable landmark along Mounts Bay Road foreshore is a privately owned jetty and boatshed at the bottom of Kings Park Avenue, commonly known as the Blue Boat House. It has become an iconic structure, popular for photographers and tourists. The boatshed was originally built in the 1930s. It came into the hands of the Nattrass family in 1944. In 1972, it had other owners, until 2001, when it was purchased by Peter Nattrass, son of Roland Nattrass and Lord Mayor of Perth at the time. The boatshed had become very run down and faced government threats to demolish and remove it. The family repaired it, including repainting it in a bold blue colour. On 6 February 2004, the refurbished boatshed was re-launched by Perth yachtsman Jon Sanders and Perth sailor David Dicks. In 2015 the timber jetty was replaced with a new one with steel pylons. The Blue Boat Shed has become an internationally known landmark and tourist destination for photographs in the last decade.
Another notable structure along the Mounts Bay Road foreshore is 'Eliza', a 2.2 metres high bronze sculpture by Perth artists Tony Jones and Ben Jones which was erected in 2007. The sculpture and plinth are mounted on a steel pylon 15 metres off the shoreline and depicts a woman about to dive off a wooden platform. The artwork has its own lighting from solar panels. Eliza is regularly 'dressed' in various costumes by nearby university students and other unknown pranksters. Eliza commemorates the Crawley Baths built in 1914, demolished in 1964. The baths were a prominent landmark and Perth's prime competition and recreational venue for half a century. The Crawley Baths were reportedly the largest enclosed body of water in the southern hemisphere.
Mounts Bay Road has been a major transport route from the western suburbs to and from the city for many years. The views of the foreshore from Matilda Bay, South Perth and Applecross with Kings Park behind provide a beautiful and distinctive remnant vegetated setting to the river.

WESTERN AUSTRALIAN HISTORIC THEME

STATEMENT OF SIGNIFICANCE

Mounts Bay Road foreshore, including Goonininup and Kooyamulyup, is a Registered Aboriginal Site.
It was a favoured camping ground for Whadjuk Nyoongar people at the time of colonisation.
The Mounts Bay Road foreshore has aesthetic value as a picturesque drive along the river at the base of Mount Eliza.
It has associations with iconic structures along the foreshore, including the Blue Boat House and the 'Eliza' statue, which marks the location of the former Crawley Baths.

NATURE OF SIGNIFICANCE

HERCON Value A - Its importance in demonstrating the evolution or pattern of Perth's history

Mounts Bay Road foreshore, including Goonininup and Kooyamulyup, is a Registered Aboriginal Site. It was a favoured camping ground for Whadjuk Nyoongar people at the time of colonisation.

HERCON Value B - Its importance in demonstrating rare, uncommon or endangered aspects of Perth's heritage

HERCON Value C - Its potential to yield information that will contribute to an understanding of Perth's history

HERCON Value D - Its importance in demonstrating the characteristics of a broader class of places

HERCON Value E - Any strong or special meaning it may have for any group or community because of social, cultural or spiritual associations

It was a favoured camping ground for Whadjuk Nyoongar people at the time of colonisation.

HERCON Value F - Its importance in exhibiting particular aesthetic characteristics valued by any group or community

The Mounts Bay Road foreshore has aesthetic value as a picturesque drive along the river at the base of Mount Eliza. It has associations with iconic structures along the foreshore, including the Blue Boat House and the 'Eliza' statue, which marks the location of the former Crawley Baths.

HERCON Value G - Any special association it may have with the life or work of a person, group or organization of importance in Perth's history

Mounts Bay Road foreshore, including Goonininup and Kooyamulyup, is a Registered Aboriginal Site.

HERCON Value H - Its importance in demonstrating a high degree of creative or technical achievement

HERCON Value I - Any HERCON Value I - Any other characteristic it may have that in the opinion of the decision making body is relevant

CONDITION AND AUTHENTICITY

Condition	Good
Building Fabric Authenticity	High

CLASSIFICATION OF SIGNIFICANCE

Considerable – Category 2 - Very important to the heritage of the locality.

HISTORY

Kings Park was among the places of Western Australia inhabited by the Nyungar people for thousands of years prior to European settlement. Goonininup, at the base of Mooro Katta is the area of the park (where Kennedy's Fountain is now located) marks the site of the spring. This area is significant to the Aboriginal people because it is the home of the mythical Rainbow serpent the Waugal.In 1827 Captain James Stirling made a survey of the Swan River and took on water at this point two years prior to returning to the area to establish the colony of Western Australia. Because of the water, the area quickly attracted commerce with a boat building yard being constructed near the spring followed by a steam mill.
The Swan Brewery, established on Mounts Bay Road in 1879, grew by the 1890's to become the leading brewery in WA. The volume of traffic which passed the area encouraged the Perth Temperance Society to install a horse trough and cup and shortly after Mounts Bay Gardens became the Convict Depot. In 1861 Governor Kennedy had a cistern built to collect water from the natural spring.

AUSTRALIAN HISTORIC THEME

3. Developing Perth's (Local, Regional & National Economies) - 3.8.7 Building & maintaining roads (planting road reserves)
8. Developing Perth's Cultural Life - 8.1.4 Enjoying the natural environment

STATEMENT OF SIGNIFICANCE

The Avenue of London Plane Trees on Mounts Bay Road were originally planted in 1910 and constitute the line of trees at the foot of Kings Park situated in Mounts Bay Garden, Mounts Bay Road.
These trees are in excellent condition for the species and attained outstanding aesthetic quality.
The line of trees contributes strongly to the streetscape of Mounts Bay Road where they edge the curved road and contrast strongly with the open river side of the road.
The trees also conceal the small park at the base of King's Park and help to isolate the traffic and thus form a significant contribution to the landscape.

Physical Description	

The three sewage pumping stations, prominently located along the Perth foreshore, incorporated a civic function that of a gentlemen's public toilet, as well as their utilitarian function of pumping sewage. This allowed Mr A.R.L. Wright, an Architect in the Public Works Department, to design the buildings in a more dignified domestic style of architecture than might have otherwise been the case.
The three pumping stations are identical in design, however the plan of Station no 1 Causeway was reversed. The Station share a classical tripartite form. The rock faced cement block walls, cement rendered pilasters, roughcast frieze and corbelled cornice evoke a strong image of a small public temple, which is then moderated by the inclusion of quarter panned windows and picturesque gablets, terracotta ridge capping and finials on the red Marseillaise tiled roof.

HISTORY

Demolished 2004. Between 1891 and 1911 the population of the City of Perth increased from 9,500 to 87,000, a nine-fold increase (Census of WA). The City was ill equipped to deal with such a rapid influx of people. The demand for housing was overwhelming and temporary tent cities had to be established in Perth, Subiaco and Fremantle. Building construction was hurried and at times haphazard. As a consequence, public concern for jerry-built housing was frequently voiced in the press. In Perth the provision of piped water was limited drainage of storm water was in its infancy and disposal of sewage was by night soil cart or cesspit. With these overcrowded and unsanitary living conditions it was little wonder that there were several epidemics of cholera and typhoid fever. The efficient disposal of wastewater and sewage became a major health issue in the political debate. The installation of a public sewage system was a costly undertaking for a young state government

already burdened with public dept. Public pressure from health authorities and civic leaders eventually saw the government take action. The City built three pumping stations in 1913-1914: No. 1 at 1 Adelaide Terrace, No. 2 in Langley Park and No. 3 at 5 Mounts Bay Road. Prominently located along the Perth foreshore, they all incorporated a civic function, that of a gentlemen's public toilet, as well as their utilitarian function of pumping sewage. This allowed Mr A.R.L. Wright, an Architect in the Public Works Department, to design the buildings in a more dignified domestic style of architecture than might have otherwise been the case.
The three pumping stations were identical in design, however the plan of Station No. 1 Causeway was reversed. The stations share a classical tripartite form. The rock-faced cement block walls, cement rendered pilasters, roughcast frieze and corbelled cornice evoke a strong image of a small public temple, which is then moderated by the inclusion of quarter panned windows and picturesque gablets, terracotta ridge capping and finials on the red Marseillaise tiled roof.
A heritage assessment was undertaken in 2003, prior to the Perth Low Level Pumping Station No. 3 being demolished. No. 1 and No. 2 are on the State Register of Heritage Places (P03298).
Significance: Pump Stations marked the introduction of a comprehensive public sewerage system in metropolitan Perth. The buildings are important in association with historic persons being A.R.L. Wright and F.W. Lawson, C.S.R. Palmer, J. Davis and H. Oldham. The Pump Stations offer an important educational opportunity for interpretation of early engineering techniques. Their innovative design and construction demonstrates of a way of life no longer practiced.

HISTORY

Part of the UWA Conservation Area SHO Place Number 24364. To be further investigated as a possible Heritage Area. The Zoology Building was the first permanent building constructed on the University campus at Crawley. It was originally constructed to house the Departments of Biology and Geology. In 1947 the Senate renamed the chair of Biology as the chair of Zoology. The Department of Geology remained in the building until 1962. The foundation stone was laid in September 1923 by Sir James Mitchell, Premier of WA. The building was designed by Government Architect William Hardwick and the building was constructed by builder C.W. Arnott. The Chancellor of the University was A.J.M. Saw.
The building currently houses the Department of Human Biology.

PHYSICAL DESCRIPTION

Architectural Style 1 General	Inter-War (c.1915-c.1940)
Architectural Style 1 Specific	Gothic
Architectural Style 2 General	
Architectural Style 2 Specific	
Archaeology	
Physical Description	

A substantial residential college built in the Inter-War Gothic style in brick and tile and featuring small paned casement windows, crenellations and a dominant central tower with a large entrance archway.
The design of the building is influenced by English University buildings of Oxford and Cambridge.
The building is set back from the road with formal gardens featuring terracing, lawns and massed planting of exotic trees.
Two examples of Cork oak trees, one located in courtyard in front of St. George's College facing Stirling Highway and the other in back, between the Chapel ad courtyard.
Both are major elements in the St. George's Garden and contribute to the historic significance of the garden.

Walls 1 Material	Brick - Face

HISTORY

The University College Act of 1926 provided for the allocation of land (2 hectares) for the purpose of erecting university colleges. The Church of England established the Council of St George's College for the purpose of developing the first residential college. In 1927 Council commissioned the firm of Hobbs, Smith and Forbes to prepare the designs. Sir Talbot Hobbs was a trustee of the Anglican archdiocese from 1920 to 1926 and a senior partner. The foundation stone was laid in May 1929, the building was completed in 1930 and opened in

April 1931. The kitchen was rebuilt and a new south wing and Sub-Warden's house was opened in 1962. A north wing was completed in 1968. Both additions designed by architects Hobbs Winning and Leighton.

HISTORY

The house was completed in 1859 in readiness for the first Anglican Bishop of Perth, Matthew Hale. He had initiated its construction in 1856 when he visited and bought the land for the house. This consisted of four allotments on which stood a house and stable. He later bought more land to the west as far as Spring St.
The original Bishop's House incorporated the earlier structure at the western end of the lot. The earlier structure was believed to have been built with stables and outbuildings in the 1840's and was owned by Edward Hammersley. The stables and outbuildings have subsequently been demolished. The original building was roofed with Sheoak shingles.
For nearly a century Bishop's House was a major centre for social, intellectual and religious life in Perth. Bishop Hale promoted debating, amateur dramatics and book clubs. In 1860 Bishop Hale erected the Bishop's Cottage for the clergy and in 1872 a two-storey house on the site was used for the education of aboriginal children.

Bishop Parry enlarged the adjacent cottage for his own residence, and this was also used by Archbishops Riley and de Tann. The grounds were planned by Bishop Hale and included English Oaks and an orchard.
[COP Heritage Places File No 1.12/78; Ray Oldham in the West Australian August 20, 1966]
In the 1950's the building was used by Legacy and became known as Legacy House.
In the 1980's the house was purchased by Alister Mc Alpine and together with the gardens, was restored by his company, Australian City Properties.

STATEMENT OF SIGNIFICANCE

The place is associated with the establishment and growth of Perth and has been an important and substantial landmark since 1859.
The place is the only Victorian Georgian style residence remaining in the City of Perth.
The place is closely associated with Bishop Mathew Blagden Hale, Perth's first Anglican Bishop.
The place has important religious associations as the residence of Anglican Bishops and Archbishops of Perth for almost 100 years.
The place is aesthetically pleasing and provides a visual oasis in an area of high-rise office developments and contributes to the Perth community's sense of place.

HISTORY

The Swan Brewery, established on Mounts Bay Road in 1879, grew by the 1890's to become the leading brewery in WA. During the early 1900s it produced 25-40% of beer in WA. By 1924 it controlled 50% of the beer market in WA. From circa 1950 it had a monopoly in brewing in WA and until the 1960's was the state's largest single employer (along with WA newspaper). Early history of the site includes colonial boat building, first Aboriginal School, first use of steam power for floor and timber mill. Kings Park was among the places of Western Australia inhabited by the Nyungar people for thousands of years prior to European settlement. Goonininup, at the base of Mooro Katta is the area of the park (where Kennedys Fountain is now located) marks the site of the spring. This area is significant to the Aboriginal people because it is the home of the mythical Rainbow serpent the Waugal. In 1827 Captain James Stirling made a survey of the Swan River and took on water at this point two years prior to returning to the area to establish the colony of Western Australia. Because of the water the area quickly attracted commerce with a boat building yard being constructed near the spring followed by a steam mill. The volume of traffic which passed the area encouraged the Perth Temperance

Society to install a horse trough and cup and shortly after Mounts Bay Gardens became the Convict Depot. In 1869 the Convict Hiring Depot became the Invalid Depot and Poor House for indigent old men. In 1861 Governor Kennedy had a cistern built to collect water from the natural spring.

HISTORY

The central city fire station is a typical purpose designed civic building dating from the period of expansion following the gold boom of the 1890's when the development of Perth was characterised by an extensive program of Public Works.
The design of the building was probably influenced by John Granger Chief architect with the PWD at the Period.
The building has been conserved for museum purposes.

WESTERN AUSTRALIAN HISTORIC THEME

4. Social and civic activities - 404 Community services and utilities
5.Outside influences - 503 Natural disasters

8. Developing Australia's Cultural Life -8.10.4 Designing and building fine buildings
8. Developing Australia's Cultural Life -8.10.5 Advancing knowledge in science and technology

STATEMENT OF SIGNIFICANCE

The place was the first purpose-built fire station in Western Australia, and the largest and most comprehensively equipped fire station in the State for almost 80 years.
The place makes a positive contribution to the streetscape as a well-known landmark and is an integral component of the historic Murray Street East Precinct, which comprises a number of former Government, administrative and ecclesiastical buildings dating from c.1900.
The place is an outstanding example of the Federation Romanesque style of architecture and is rare as a secular building designed by prominent Perth architectural firm Cavanagh and Cavanagh.
The place represents changes in fire and emergency services management in Western Australia since 1900.The place provides an understanding of firefighting, a specialised occupation of great importance to the people of Western Australia in its role as a museum.
Numerous examples of technical excellence and innovation in firefighting were developed at the place.
Many of these were developed under the leadership of James McFarlane Lapsley, who was Superintendent of the Perth Fire Brigade from 1897 to 1910 and later the first Chief Officer of WA Fire Brigades from 1910 to 1922.

Physical Description	

Three storey rendered brick building with unusual contrasting classical entrance porch flanked by circular pillars. Building characterised by horizontal banding at ground floor level, variety of window details and decorative parapets. Two storey section behind building contains fine original internal timber details and formal hall.

Walls 1 Material	Brick - Rendered
Walls 2 Material	Render - Smooth
Roof Material	Metal - Corrugated Iron
Architect	FJ Deacon; Oldham Boas; Young Australian League
Builder	FJ Deacon; Oldham Boas; Young Australian League
Other Associations	

HISTORY

Young Australian League Building was constructed in 1924 as a memorial to members of the League killed in World War 1. The YAL was a patriotic, independent, non-political, non-sectarian youth organisation founded in W.A. by John Joseph Simons (known as Boss) in 1905. It developed readily out of a branch of the West Australian Football Association of which the charismatic Simons was secretary from 1909-1914. The aim of the League was to develop a spirit of Australian nationalism in young boys. The Young Australian League also developed a youth camp at Araluen, (adjacent Araluen Park). The organisation enjoyed widespread popularity particularly in the inter-war period. The foundation stone was laid on 23 April 1922 by the then Prime Minister, William Morris Hughes.

In the 1970s Gilkisons Dance Studio occupied a portion of the building which continues to the present. A museum for the Young Australia League is located in the ground floor.

WESTERN AUSTRALIAN HISTORIC THEME

1. Demographic settlement & mobility - 104 Land allocation & subdivision
4. Social and civic activities - 404 Community services and utilities
4. Social and civic activities - 407 Cultural activities
4. Social and civic activities - 408 Institutions
5. Outside influences - 501 World war & other wars
6. People - 605 Famous & infamous people

AUSTRALIAN HISTORIC THEME

4. Building Settlements, Towns and Cities - 4.3 Developing institutions
4. Building Settlements, Towns and Cities - 4.6 Remembering significant phases in the development of settlements, towns & cities
8. Developing Australia's Cultural Life - 8.5 Forming associations
8. Developing Australia's Cultural Life - 8.10.4 Designing and building fine buildings
9. Marking the phases of life - 9.2.2 Forming youth organisations

STATEMENT OF SIGNIFICANCE

The place has been associated with the activities of the Young Australia League from the time of purchase by the League in 1920/1921 and is associated with the founder of the Young Australia League, J.J. Simons, and with other prominent West Australians who were members of the organisation including State Premier Sir Walter James and prominent architect Lionel Boas whose architectural firm Oldham Boas was responsible for the design of the Young Australia League Building.
It is also associated with the thousands of young people who took part in the programmes of the League.
The place is representative of the Young Australia League philosophy and a way of life based on the expression of Australian nationalism and has been associated with the development of youth organisations in Australia and overseas.
The place is a rare example of the Inter-War Free Classical style enhanced by an unusual facade with a two-storey colonnade, semi-enclosed court and strong vertical detailing.
The place forms an important component of the streetscape.

NATURE OF SIGNIFICANCE

HERCON Value A - Its importance in demonstrating the evolution or pattern of Perth's history

HERCON Value B - Its importance in demonstrating rare, uncommon or endangered aspects of Perth's heritage

The place is a rare example of the Inter-War Free Classical style enhanced by an unusual facade with a two-storey colonnade, semi-enclosed court and strong vertical detailing.

HERCON Value C - Its potential to yield information that will contribute to an understanding of Perth's history

HISTORY

The property was originally part of a larger lot owned by Thomas Helms in 1840. A house was recorded in the rates books from 1880 and occupied by Sarah Sherwood. In 1886 it was run as a boarding house by Mrs Giblin. In 1892 Timothy Quinlan was the occupier of the house which was owned by Daniel Connor. Quinlan and Connor owned many properties within Perth. The current brick house was built circa 1895 and the second storey added in 1897/1898. Outbuildings were located at the rear of the house.
In 1904 the building was rented and a boarding house was run from the building. In 1905 Kenneth Philip lived in the house and established a garden. In 1920 the Young Australia League purchased the property from Timothy Quinlan. The house was converted into flats. The Young Australia League planned their headquarters building located next to the house. The former house was rented to government departments and the Children's Court which was previously located in the building moved to different premises. During the 1920s and 1930s a boarding house was run from the building. This was common at the time for large houses to be divided up. The building is used as office space.

It is also associated with the thousands of young people who took part in the programmes of the League.
The place, a simple example of a two storey late nineteenth century residential building, is the only residential style building in the Murray Street East Precinct and a rare example of a substantial late nineteenth century house in central Perth.
The place was the home of a prominent member of the Roman Catholic community, philanthropist, property investor and politician Timothy Quinlan who, together with his father-in-law, Daniel Connor, invested in significant land holdings in central Perth which became known as the Connor-Quinlan Estate.
The place forms an important component of the streetscape.

HISTORY

Public building constructed in 1912 as part of the extensive programme of Public Works carried out in Perth in the period of expansion following the gold boom of the 1890's. The original lot the building is located was owned by Edward Stone and Septimus Burt who were partners in a law firm. Their office was located on the property as well as St George's Hall, which was the first theatre in Perth. In 1896 the land was transferred to the Crown, except the portion where the law office was located. St Georges Hall became the Government Photo

Lithographic Office. Other buildings were located on the property. In 1911 it was proposed that the property was to be redeveloped as the Perth Medical and Health Department building which would accommodate the increase in staff. Probably one of the last buildings in Perth to use Donnybrook Sandstone for the whole facade. The building was built in 1912 as a result, of a tender let to Mr SB Alexander in 1911 for the sum of 10,397 pounds to a design prepared by the Public Works Architect Hillson Beasley. Various State government departments have been located in this building including the Health Department, Chief Secretary's Department and Department of Native Affairs and Pollution Control division of the Environmental Protection Agency which was the last department to occupy the building. During the time the building was Department of Native Affairs was the time of the Stolen Generations and when the Government controlled Aboriginal people's lives. Many people waited outside the building for information.
The building has been used for community welfare organisations and is currently the location of Yokai which is an advocacy organisation to action the Bringing Them Home Report.

WESTERN AUSTRALIAN HISTORIC THEME

1. Demographic settlement and mobility - 102 Aboriginal occupation
1. Demographic settlement and mobility - 103 Racial contact and interaction
4. Social and civic activities - 401 Government and politics
4. Social and civic activities - 404 Community services and utilities
6. People - 601 Aboriginal people
6. People - 605 Famous and infamous people

AUSTRALIAN HISTORIC THEME

3. Developing Local, Regional and National Economies - 3.14.2 Using Australian materials in construction
7. Governing - 7.5.9 Providing services and welfare
7. Governing - 7.5.10 Enforcing discriminatory legislation
7. Governing - 7.5.11 Administering Aboriginal Affairs

STATEMENT OF SIGNIFICANCE

The place was associated with, and occupied by, a number of State Government departments dating from its construction in 1912 until 1992, including in particular the Public Health and Medical Department; the Chief Secretary's Department; and the Department of Aborigines and Fisheries and as such represents the administration of the State Government from 1912 to the 1990s.
The place is a fine example of the work of Chief Architect Hillson Beasley with its high design quality exhibited in its planning, the design of the façade of the building featuring Donnybrook stone, large windows and finely detailed iron balustrading and internal detailing including ornate moulded ceilings, clear leadlights and fine timber details including the staircase and an Arts and Crafts style fireplace surround.
The place is a major component of the streetscape by virtue of its fine detailing and the distinctive Donnybrook stone façade.
The place was the office of the Department of Aborigines from 1922 to 1944/1945, and for the Chief Protector of Aborigines A. O. Neville, from 1926 to his retirement in 1940, and was therefore associated with the development and implementation of State Government policies towards Aboriginal people such as the removal and assimilation of children of mixed descent and the resettlement of Aboriginal families at Government settlements such as Moore River.
These policies had a major impact on the lives of many Aboriginal people who in recent times have been prominent in the reconciliation process.
The place was associated with the development of public health administration in Western Australia and specifically with the Health Act, 1911, which established the Public Health and Medical Department for which the building was constructed in 1912.
It provided accommodation for the first Commissioner of Public Health Dr James Hope from 1909 to 1915, and Dr R. C. Everitt Atkinson, Commissioner from 1915 to 1944.
The place provided accommodation for the Chief Secretary's Department from 1912 to 1970/1971 and for various Chief Secretaries including the Hon. John Michael Drew, MLC, and Undersecretary Hubert Charles Trethowan.

The place was constructed by builder S. B. Alexander, who was also the proprietor of the Donnybrook Freestone quarries.
The place is highly valued by the community.

NATURE OF SIGNIFICANCE

HERCON Value A - Its importance in demonstrating the evolution or pattern of Perth's history

The place was the office of the Department of Aborigines from 1922 to 1944/1945, and for the Chief Protector of Aborigines A. O. Neville, from 1926 to his retirement in 1940, and was therefore associated with the development and implementation of State Government policies towards Aboriginal people such as the removal and assimilation of children of mixed descent and the resettlement of Aboriginal families at Government settlements such as Moore River. These policies had a major impact on the lives of many Aboriginal people who in recent times have been prominent in the reconciliation process.
The place provided accommodation for the Chief Secretary's Department from 1912 to 1970/1971 and for various Chief Secretaries including the Hon. John Michael Drew, MLC, and Undersecretary Hubert Charles Trethowan.

HISTORY

Salvation Army Congress Hall (fmr) at 69 Murray Street was designed by Staff Captain Percival Dale of the Salvation Army's main office in Melbourne and constructed in 1929/1930. It was built onto the front of the barracks building which was previously constructed at the rear of the property. The Salvation Army was established in WA in 1891. Larger premises were needed, and the Salvation Army bought land on Pier Street in 1898. In 1901 they bought the lot next to the Pier Street property in Murray Street.
Prior to the construction of the building the Salvation Army used the house already on the property which was demolished for the Congress Hall. The hall was opened in March 1930. The building was used for administrative and community services. In 1991 the Salvation Army moved to Northbridge and the buildings were sold. The building was converted to residential use by architect Brian Klopper in 1993.

Salvation Army Headquarters (fmr) building at 48 Pier Street was constructed in 1899 by the Salvation Army. The Salvation Army bought four shops adjacent to the headquarters building in 1918. The rear of the headquarters was converted to residential apartments and connected to the building on Murray Street in 1997. This building is also known as the Perth Fortress building which was opened in 1911. The People's Palace was located in the upper floors of the shops and was designed to provide cheap accommodation for travellers. The Salvation Army also operated a soup kitchen from the building during the 1910s. The shopfronts were used as office space for the Salvation Army. During the 1930s some of the shops were leased to other tenants.

WESTERN AUSTRALIAN HISTORIC THEME

4. Social and civic activities - 404 Community services and utilities
4. Social and civic activities - 406 Religion

AUSTRALIAN HISTORIC THEME

3. Developing Local, Regional and National Economies - 3.22 Lodging people
3. Developing Local, Regional and National Economies - 3.23 Catering for tourists
4. Building Settlements, Towns and Cities - 4.1.5 Developing city centres
8. Developing Australia's Cultural Life - 8.5 Forming associations
8. Developing Australia's Cultural Life - 8.6 Worshipping
8. Developing Australia's Cultural Life - 8.10.4 Designing and building fine buildings

STATEMENT OF SIGNIFICANCE

Salvation Army Headquarters (fmr) and Salvation Army Congress Hall (fmr) are conspicuous Perth landmarks and are fine examples of the Federation Free style and the Inter-War Georgian style respectively.
The place is an important collection of civic and institutional historic buildings in the Murray Street.
Salvation Army Headquarters (fmr) is an important part of a precinct of late nineteenth century buildings in Pier Street between Hay and Murray Streets.
The place was constructed by and for the Salvation Army in Western Australia, which has provided important religious and welfare services to the community of Western Australia since 1891.

NATURE OF SIGNIFICANCE

HERCON Value A - Its importance in demonstrating the evolution or pattern of Perth's history

Salvation Army Headquarters (fmr) and Salvation Army Congress Hall (fmr) are conspicuous Perth landmarks and are fine examples of the Federation Free style and the Inter-War Georgian style respectively the place is an important collection of civic and institutional historic buildings in the Murray Street East Precinct;

HERCON Value B - Its importance in demonstrating rare, uncommon or endangered aspects of Perth's heritage

Salvation Army Headquarters (fmr) is an important part of a precinct of late nineteenth century buildings in Pier Street between Hay and Murray Streets.

HERCON Value C - Its potential to yield information that will contribute to an understanding of Perth's history

HERCON Value D - Its importance in demonstrating the characteristics of a broader class of places

HERCON Value E - Any strong or special meaning it may have for any group or community because of social, cultural or spiritual associations

The place was constructed by and for the Salvation Army in Western Australia, which has provided important religious and welfare services to the community of Western Australia since 1891

HERCON Value F - Its importance in exhibiting particular aesthetic characteristics valued by any group or community

Salvation Army Headquarters and Congress Hall (fmr), comprising the Salvation Army Headquarters, a three and four-storey Flemish bond brick and stucco building, in the Federation Free Style (1899); a two storey Barracks building constructed in brick in a utilitarian style (1899-1900); People's Palace, a two storey building constructed in stretcher bond brickwork, with stucco detailing in the Federation Free style (1903); and, Salvation Army Congress Hall (fmr), a two storey building constructed in brick with stucco decorative work in the Inter-War Georgian Revival style (1929/30), has cultural heritage significance. The adaptive reuse work to the Murray Street buildings is of little significance, together with the external fabric added to the building to create the new uses. The suspended ceilings, carpets, partitions, lighting, replacement stair toilet and bathroom fittings are of little significance throughout. Replacement joinery, shop fronts, signage, canvas awnings and the like are of little significance.

HERCON Value G - Any special association it may have with the life or work of a person, group or organization of importance in Perth's history

HERCON Value H - Its importance in demonstrating a high degree of creative or technical achievement

HERCON Value I - Any HERCON Value I - Any other characteristic it may have that in the opinion of the decision-making body is relevant

CONDITION AND AUTHENTICITY

Condition	Excellent
Building Fabric Authenticity	High level of authenticity.

CLASSIFICATION OF SIGNIFICANCE

Exceptional – Category 1 - Essential to the heritage of the locality. Rare or outstanding example.

Two storey government building with sandstone facing to ground floor and brickwork above. Simple classical detailing to facade and stonework of parapet and pediments.

Walls 1 Material	Brick - Face
Walls 2 Material	Stone - Sandstone - Donnybrook
Roof Material	Metal - Colourbond
Architect	Hillson Beasley or W B Hardwick; W A Atkins
Builder	Hillson Beasley or W B Hardwick; W A Atkins
Other Associations	

HISTORY

Public building constructed in 1910 as a part of the period of expansion following the gold boom of the 1890's when the development of Perth was characterised by an extensive program of Public Works. The design was drawn up by Hillson Beasley in the Public Works Department. The building was to store supplies for State government departments such as stationary, bulk store, sample rooms, the tender board, general offices and a strong room. The building contract was awarded to W.A. Atkins for £14,478. The building was completed in 1911 and included a lift for large goods. In 1919 the building was altered internally to accommodate storage for Education Department supplies and a classroom for correspondence school. Staff from the Department of Mines were also accommodated in the building. Further changes were made in the 1940s to accommodate stores from the hospital. In 1985 the Communicable Diseases Control Centre was located in the building, with alterations to suit this new purpose. It has continued to be used for health purposes.

STATEMENT OF SIGNIFICANCE

The place is an integral and significant part of the historic Murray Street precinct that stretches from Pier Street in the west to Victoria Square in the east, comprising mainly civic, government, and institutional buildings predominantly from the Federation period.
The place is a fine example of a two-storey brick and Donnybrook sandstone building in the Federation Free Classical style, which makes a strong visual contribution to its streetscape setting.
The place one of the many fine buildings designed by the Public Works Department under the direction of Hillson Beasley, its chief architect, and built by William Atkins, a well-known West Australian builder.
The place was one of a number of significant public buildings built by the government between 1900 and 1914, a period of considerable activity in public works in Western Australia.

NATURE OF SIGNIFICANCE

HERCON Value A - Its importance in demonstrating the evolution or pattern of Perth's history

The place was one of a number of significant public buildings built by the government between 1900 and 1914, a period of considerable activity in public works in Western Australia.

HERCON Value B - Its importance in demonstrating rare, uncommon or endangered aspects of Perth's heritage

HERCON Value C - Its potential to yield information that will contribute to an understanding of Perth's history

HERCON Value D - Its importance in demonstrating the characteristics of a broader class of places

HERCON Value E - Any strong or special meaning it may have for any group or community because of social, cultural or spiritual associations

HERCON Value F - Its importance in exhibiting particular aesthetic characteristics valued by any group or community

The place is an integral and significant part of the historic Murray Street precinct that stretches from Pier Street in the west to Victoria Square in the east, comprising mainly civic, government, and institutional buildings predominantly from the Federation period.
The place is a fine example of a two-storey brick and Donnybrook sandstone building in the Federation Free Classical style, which makes a strong visual contribution to its streetscape setting.

HERCON Value G - Any special association it may have with the life or work of a person, group or organization of importance in Perth's history

The place one of the many fine buildings designed by the Public Works Department under the direction of Hillson Beasley, its chief architect, and built by William Atkins, a well-known West Australian builder.

HERCON Value H - Its importance in demonstrating a high degree of creative or technical achievement

HERCON Value I - Any HERCON Value I - Any other characteristic it may have that in the opinion of the decision-making body is relevant

CONDITION AND AUTHENTICITY

Condition	Good
Building Fabric Authenticity	Medium level of authenticity as it is largely as originally constructed with detail intact.

Physical Description	

Large four storey pointed brick building with horizontal bands of render. Levels are differentiated by different window details. The facade is broken by cured bays with cupolas. Prominent classical cornice and large arch are located over the main entry.

Walls 1 Material	Brick - Pointed
Walls 2 Material	Timber
Roof Material	Metal - Corrugated Iron
Architect	George Temple Poole; R P & W H Vincent; W B Hardwich
Builder	George Temple Poole; R P & W H Vincent; W B Hardwich
Other Associations	

HISTORY

The building was constructed between 1892 and 1894 for the Government Printing Office which was responsible for printing Parliamentary papers, The Government Gazette, office stationary for government departments and publishing professional papers by the Government Geologist and other officers. Due to the development of Government services and population increase as a result of the Gold Boom more office space was required for staff. A new building was designed for the property to accommodate the staff required.
The building was designed by George Temple Poole who was the Colonial Architect at the time. The building was designed with an innovative ventilation system which allowed air into all the rooms and floors. In 1907 further extensions were required to accommodate more Government services. The design for the extensions was drawn by Hillson Beasley Chief Architect of the Public Works Department. The Government Printers moved location in the late 1960s and the building was sold to Telecom (Telstra). The building was used as a telecommunications museum in the 1980s. Part of the building is used by Curtin University as the Graduate School of Business.

STATEMENT OF SIGNIFICANCE

The place has a pleasing architectural composition and complex fenestration and, together with the creative design of an interesting corner tower, makes an important contribution to the historical and aesthetic character of the western end of Murray Street.
The place is an example of a late 1890s government building constructed, and subsequently substantially modified, by the Public Works Department to house an expanding Government Department.
The place has a strong association with the architects George Temple Poole, Hillson Beasley and William Hardwick.
The place demonstrates aspects of the growth and development of the Government Public Service from 1894 to 1922, and of the State in general.
The place contributes to the fabric of Perth as an element surviving from a former phase of development.

PHYSICAL DESCRIPTION

Architectural Style 1 General	Federation (c.1890-c.1915)
Architectural Style 1 Specific	Free Classical
Architectural Style 2 General	
Architectural Style 2 Specific	
Archaeology	
Physical Description	

Predominantly two storey building addressing the Murray Street / Pier Street corner. Building features arched openings and decorative gables. Architectural details include pilasters and entablature embellished with florid motifs. The decorative features of the facade are picked out in colour - colour scheme is not original. Building extensively altered at ground level.
First floor windows have been altered.
The building is a component of a significant streetscape which extends from the Pier Street intersection to St Mary's Cathedral. It also contributes to the aesthetic value of Pier Street.

Walls 1 Material	Brick - Rendered
Walls 2 Material	
Roof Material	Tile - Terracotta
Architect	William Wolf
Builder	
Other Associations	Maud Edmiston (owner/proprietor)

HISTORY

Marjorie Ward sold the hotel in the 1960s to a man who wanted to gift it to his son, but tragically the son was killed in a car accident soon after; so the hotel was on-sold to ‘Miss Maud’. Maud Edmiston arrived in Perth in 1968 from Sweden. Realising how much she missed the cafes in Stockholm, she was inspired to open her first store ‘Miss Maud’ in Carillon City in 1971. In 1973, Miss Maud brought Smörgåsbord to Perth, opening Miss Maud Swedish Hotel and Restaurant on the corner of Pier and Murray Streets, Perth, in the former Derward Hotel. In 1979, Miss Maud’s was the first restaurant in Perth to apply for an al fresco dining licence. It became a Perth institution. In 1992, Maud Edmiston was named the ‘Bulletin’s Business Woman of the Year’, and in 2001 was awarded the Western Australian Citizen of the Year – Industry and Commerce, the first woman to receive this award. Miss Maud’s coffee bean poll in Perth has become a part of popular culture. The poll has accurately

predicted the outcome of every Federal election since 1996, except for Kevin Rudd's win in 2007.In 2018, the company sold the Miss Maud Swedish hotel and Restaurant at 93 Murray Street to focus on its café chain. As of 2021 the 'Miss Maud' hospitality group comprises seventeen Miss Maud pastry houses, one Cafe Stockholm-branded outlet, and a catering service, all located in Western Australia. In 2022, the building has lost original detail at ground floor level. It features arched openings and decorative gables, pilasters and entablature embellished with florid motifs. The decorative features of the facade are picked out in a colour (not original). The ground floor is extensively altered.

HISTORY

Until the 1880s the town centre was characterised by the establishment of small cottages, shops and small businesses and was rural in character. The expansion of commerce following the discovery of gold in the 1890s put pressure on land in the centre of Perth with the result that many of the residential buildings located in the inner city were replaced with commercial buildings during this time, and the centre of Perth was substantially rebuilt. Murray Street was established along with St. Georges Terrace and Hay Street as one of the main streets of Perth from the time of colonisation in 1829 when the Perth Town Lots were surveyed and planned out.
Post Office directories show that the building at 114 Murray Street was originally General Electrical Engineering Company's technical offices and warehouse, built in 1903. It was No. 122, changing in 1908, at which time it was run by Hugh Edminston and Co, electrical and mechanical engineers. By 1920 the building was the Cyclone Fence Company showrooms at No. 114, whose factory was at Lime, Brown and Royal Streets, East Perth (in 2022 this is a car park). Off the street at the rear (No. 116) were other factories and businesses. For example, in 1930, Cyclone Fence Co was the front building, and at the rear was Julian Bros. cabinetmakers, and F. T. Wimble and Co, printers and furnishers.
In 1936, the Pindawa Building (No. 114-116) was established; which is the likely date for the façade of the 1903 warehouse being altered and the lettering added. The same tenants occupied the buildings (Cyclone Fence Co

and Wimble and Co) with land agents Davidson and Sons added. More research (including rates book search) will determine if the name is related to the Pindawa Pastoral Company established c. 1927 by Mr and Mrs B. F. Mitchell. Pindawa Station imported and bred Merino pedigree rams near Canna, a railway siding on the Wongan Hills-Mullewa railway. Canna was originally called Pindawa, after the Aboriginal (Yamatji/Wadjarri) name for a well 8km to the west. There was a considerable demand for Pindawa Rams throughout the 1930s. By 1940, the tenancies in the Pindawa Building had changed from a manufacturing and industrial focus, to auctioneers, a watchmaker and a dancing studio. The State Records Office holds plans of 'Pindawa House' that were submitted to the Public Health Department as part of the dance studio application. In 1940 the rear building was still Wimble and Co, as well as stores for the Defence Department. In 1949, the last year of publication of the Post Office directory, the Pindawa Building was occupied by the auctioneers and dance studio, with Wimble and Co still in the rear building. The Metropolitan Water Supply Survey plan (1943) shows the street front building was two floors. The rear was three storeys with a basement. Aerial photos show it had a twin gable roof and was about the same size as the Pindawa Building. It was demolished in early 2006 for carparking. Aerial photos also show that between 1989 and 1995 the Pindawa Building was reroofed. In 2022, the Pindawa Building is occupied by a retail charity shop.

Walls 2 Material	Metal - Corrugated Iron
Roof Material	Metal - Corrugated Iron
Architect	J. J. Talbot Hobbs
Builder	
Other Associations	Ygnatius Boladeras

HISTORY

Until the 1880s the town centre was characterised by the establishment of small cottages, shops and small businesses and was rural in character. The expansion of commerce following the discovery of gold in the 1890s put pressure on land in the centre of Perth with the result that many of the residential buildings located in the inner city were replaced with commercial buildings during this time, and the centre of Perth was substantially rebuilt. Murray Street was established along with St. Georges Terrace and Hay Street as one of the main streets of Perth from the time of colonisation in 1829 when the Perth Town Lots were surveyed and planned out.
Post Office directories show that Y. Boladeras was a dealer situated at 23, 25 and 27 Goderich Street from 1893. The numbering changed from odd to even numbers after 1897, and also confusingly, from 130-134 in 1898; to No. 126-130 in 1902; and then again to Nos.124-126 in 1908, which is the current numbering for this building. The year of construction is on the building's façade: 1898, as is 'Boladeras Buildings.' While Boladeras had been trading for many years, the increased business due to the gold boom and general economic prosperity of this time would most likely have enabled him to commission a building. Newspapers show that in March 1898 the architect, J. Talbot Hobbs F.R.V.I.A. called for contractors to tenders for the building of four shops and dwelling houses in Murray Street, for Ygnatius Boladeras.

For Adoption

The Bicentennial Dictionary of Western Australians records that Ignatius [sic] Boladeras (born 1826 in Barcelona) was a monk who migrated from Spain in 1849 with the Benedictine party that eventually settled in New Norcia. He left the order and entered commercial life and became very successful in business. In 1859, he married an Irish migrant, Mary Flynn and they had twelve children. Boladeras was a general dealer in Perth from the 1860s. He died in Perth in 1902 and is buried in the Roman Catholic section of East Perth Cemetery. His wife Mary died in 1918.
In 1903 the building was occupied by the Perth United Friendly Societies Dispensary, Mrs Darcy's 'fancy emporium' and Smedley's Hydropathic and Russo Turkish Baths. The shops have had numerous and varied tenants over the years. The Metropolitan Water Supply Survey plan (1943) shows there were four shopfronts, 120-122, 124 and 126 in the Boladeras Building. In 1949, the last publication of the post office directory the tenants were Cliff Derby, tobacconist (122); Shanghai Café, restaurant (124); and Matt Cohen, pawnbroker (126).
At 2022 the two storey commercial building has a combination of arched and rectangular windows at first floor level surrounded by prominent mouldings. This suggests the easternmost shop was built slightly later than the others, as it has different window heads. The front parapet and pediment conceal the roof. At ground floor level there are three separate shops with altered frontages and the awning is not original.

WESTERN AUSTRALIAN HISTORIC THEME

1. Demographic settlement and mobility - 111 Depression and boom
3. Occupations - 308 Commercial services and industries
6. People - 605 Famous and infamous people

AUSTRALIAN HISTORIC THEME

3. Developing Perth's (Local, Regional & National) Economies - 3.19 Marketing & retailing
4. Building Settlements, Town and Cities - 4.1.5 Developing city centres
4.Building Perth (Settlements & Cities) - 4.6 Remembering significant phases in the development of Perth

STATEMENT OF SIGNIFICANCE

The place has historical significance as a two-storey commercial building dating from 1898, designed by J.J. Talbot Hobbs.
It has aesthetic significance as a Federation Free style building that makes a positive contribution to the visual quality of the streetscape.
The place is a representative example of a commercial building constructed in Perth during the period of development and consolidation following the gold boom.
The building is associated with Ygnatius Boladeras, a former Benedictine monk who was successful in business before the gold boom.

NATURE OF SIGNIFICANCE

HERCON Value A - Its importance in demonstrating the evolution or pattern of Perth's history

The place has historical significance as a two-storey commercial building dating from 1898.

HERCON Value B - Its importance in demonstrating rare, uncommon or endangered aspects of Perth's heritage

HERCON Value C - Its potential to yield information that will contribute to an understanding of Perth's history

HERCON Value D - Its importance in demonstrating the characteristics of a broader class of places

For Adoption

The place is a representative example of a commercial building constructed in Perth during the period of development and consolidation following the gold boom.

HERCON Value E - Any strong or special meaning it may have for any group or community because of social, cultural or spiritual associations

HERCON Value F - Its importance in exhibiting particular aesthetic characteristics valued by any group or community

It has aesthetic significance as a Federation Free style building that makes a positive contribution to the visual quality of the streetscape.

HERCON Value G - Any special association it may have with the life or work of a person, group or organization of importance in Perth's history

The place has significance as designed by J.J. Talbot Hobbs. The building is associated with Ygnatius Boladeras, a former Benedictine monk who was successful in business before the gold boom.

HERCON Value H - Its importance in demonstrating a high degree of creative or technical achievement

HERCON Value I - Any HERCON Value I - Any other characteristic it may have that in the opinion of the decision-making body is relevant

CONDITION AND AUTHENTICITY

Condition	Good
Building Fabric Authenticity	Medium. Has lost original detail at ground floor level but intact above.

CLASSIFICATION OF SIGNIFICANCE

Considerable – Category 2 - Very important to the heritage of the locality.

HISTORY

Until the 1880s the town centre was characterised by the establishment of small cottages, shops and small businesses and was rural in character. The expansion of commerce following the discovery of gold in the 1890s put pressure on land in the centre of Perth with the result that many of the residential buildings located in the inner city were replaced with commercial buildings during this time, and the centre of Perth was substantially rebuilt. Murray Street was established along with St. Georges Terrace and Hay Street as one of the main streets of Perth from the time of colonisation in 1829 when the Perth Town Lots were surveyed and planned out.
There was a three-storey building on this location built for Robertson and Moffatt, a house furniture warehouse, in 1895. It used to be Nos. 136-140. Numbering changed in 1908. The building was in the Federation Free style of architecture, and a sketch of it appeared in the 1898 post office directory, p. 243. Robertson and Moffatt remained in this location until 1915, followed by their successors A. Waterman and Co until 1919. From 1920 the three-storey building was occupied by the City Council Electricity Department. The City Council had acquired the Perth Gas Co in 1912, which also supplied electricity. In 1923 the conversion of the city's street lighting from

gas to electricity has been completed. Tenders were called in April 1927 by architect J. L. Ochiltree for 'General Alterations to offices and for the erection of four storied additions to premises in Murray St.' The building façade has 1927 in the central pediment and reads 'City of Perth Electrical and Gas Department'. A photo held by the State Library of WA dated 1927, shows a sign posted on the building that reads: "New premises being erected for Electricity & Gas Dept. J. L. Ochiltree, Architect, Todd Bros, Contractor." A newspaper article in May 1928 reads: "The new three-storey building to house the Electricity and Gas Department of the City Council, which has been erected by Todd Bros, at a cost of £15,587, on a site of the old departmental building, is shown in the accompanying illustration. The structure which was planned by Mr. J. L. Ochiltree, is composed of brick, in a steel frame with a frontage of 66ft by a depth of 50ft and the front elevation which is 59ft. from the footpath to the centre pediment, was designed with the object of flood lighting from the balcony and from the parapet. The basement of the building will be let to tenants. The ground floor will be used as formerly, as a showroom for gas and electrical goods, and the two upper floors, will afford greater space to the staff, enabling some to be transferred from the ground floor. A two-storey structure at the rear, part of which is used as public offices, has been rearranged, and additional light is given through the roof.
"The Metropolitan Water Supply Survey plan (1943) shows the building was the 'Electricity & Gas Dept' and the brick building extended to the rear of the lot. In 1946 the State Electricity Commission was established and took over Perth City Gas and Electricity Co. A photo held by the State Library of WA dated 1953, shows the building decorated for the Queen's coronation. There is a very large 'E & G' neon letters on the roof of the building, with the letters readable from the north side. At this time the building was known as Electricity House. Another photo dated 1978 shows that the ground floor has an awning over the pavement, and the street front façade has been modernised for the State Energy Commission of WA offices.
At 2022, ownership and occupation of this building is combined with the multistorey Western Power Corporation building at 363 Wellington Street. The building has a well-balanced symmetrical form with a central rectangular pediment. It has a vertical emphasis with rectangular windows. The façade is classical in form but has retrained detail and elements of the Inter-War style, especially the semi-circular window sills and the oriel windows on the parapet of the projecting outer columns.

WESTERN AUSTRALIAN HISTORIC THEME

HISTORY

Until the 1880s the town centre was characterised by the establishment of small cottages, shops and small businesses and was rural in character. The expansion of commerce following the discovery of gold in the 1890s put pressure on land in the centre of Perth with the result that many of the residential buildings located in the inner city were replaced with commercial buildings during this time, and the centre of Perth was substantially rebuilt. Murray Street was established along with St. Georges Terrace and Hay Street as one of the main streets of Perth from the time of colonisation in 1829 when the Perth Town Lots were surveyed and planned out.
Post Office directories show that there were two businesses on this location from 1898 and allocated street Nos. 142 and 144. In 1902 they were George W. Lean, saw sharpener, and J. G. Sara, bulk store. Numbering changed to No. 138 and 142 in 1908. The Metropolitan Water Supply Survey plan (1943) shows a two-storey building with basement, and a series of brick or galvanised iron outbuildings behind. A photo held by the State Library of WA dated 1982 shows the building was occupied by Sam Rifici hair salon.
According to the Sam Rifici website, he established his first men's hairdressing business in Lake Street, Northbridge in January 1946 and opened a second salon in Wembley in 1950. His first ladies' salon was established in Hay Street, Perth in 1958. In 1959, Sam opened another ladies' hairdressing salon in Murray

Street, the largest salon in Perth. From his humble beginnings he went on to establish a network of 23 salons throughout the Perth metropolitan area, Kalgoorlie and Singapore.
At 2022 the building is occupied by professional offices on the first floor, and a café on the ground floor. It is a two-storey commercial building with a decorative pediment, embellished with classical pilasters and prominent arched cornice. The ground floor has no original detail or awnings, and the central window openings on the first floor are also not original.

HISTORY

Until the 1880s the town centre was characterised by the establishment of small cottages, shops and small businesses and was rural in character. The expansion of commerce following the discovery of gold in the 1890s put pressure on land in the centre of Perth with the result that many of the residential buildings located in the inner city were replaced with commercial buildings during this time, and the centre of Perth was substantially rebuilt. Murray Street was established along with St. Georges Terrace and Hay Street as one of the main streets of Perth from the time of colonisation in 1829 when the Perth Town Lots were surveyed and planned out.

For Adoption

The McDonald Building was built in 1898. The building contractor for the construction was Mr. R. E. Dixon, for Mr. J. E. McDonald. An article in the newspaper during the construction phase reported that a workplace accident had occurred when scaffolding collapsed and the plasterer, Thomas Baker, fell 30ft into the basement. He sustained a head injury, broken ribs and internal injuries.
A business in the basement opened in October 1898, the Spa Wine and Billiard Rooms, which had “two of Alcock’s best tables, and lighted throughout by Messrs. H. Evans and Co, of Perth, with electricity”. In the 1899 post office directory, the tenants of the new building were: Hang War, laundry; Jordan Henry, tailor; Tredrea Wine Café; and on the first floor: Mueller Botanic Society, J. E. McDonald; C. Vernon Harcourt, artist; Bolgers Club; Edmund Buzza, accountant; Benda Lucien, importer; John Dallen, com agent; Thomas Walker, teacher of elocution; and the Accountants’ and Clerks’ Association. In September 1900, an article in the newspaper reads: “Mr. McDonald is well-known in Perth where he owns considerable property. In 1895 he was associated with Mr. L. R. Menzie, when they discovered the goldfields town bearing the latter's name. Mr. McDonald came to Western Australia, about ten years ago, and he obtained an appointment as teacher in one of the Government schools. He soon gave up teaching, however, and with Mr. Menzie began prospecting on the Murchison. They took over the management of the Star of the East mine, and when that property was acquired by an English company, the pair returned to Perth to equip a prospecting party to explore the country to the north of Coolgardie. It was soon afterwards that they came across the now well-known Menzies district. After that Mr. McDonald continued the prospecting trip without Mr. Menzie, and later returned to Perth, where he resolved to settle. Three years ago Mr. McDonald erected the buildings at the corner of Barrack and Murray streets, which bear his name.”
Tragically, this article was in relation to reports that McDonald had disappeared from his Donnybrook property, feared drowned in the Preston River in September 1900. It was to be another three months before his body was found, and the report included a lengthy obituary of this life.
In c. 1910s-1920s the corner store was James Joseph Snigg, Clothier, known colloquially as ‘Snigg’s Corner.’ The State Library holds two photos from that era, showing the building as unpainted brick, with a wrap-around verandah with timber posts, and a cast iron frieze (025578PD; 108984PD).The Metropolitan Water Supply Survey plan (1943) shows Nos. 142-144 Murray Street are long, narrow spaces. There is a central entry and stairs to the upper floor, which is referred to as No. 146. There are two more shops at Nos. 148 and 150, which are square in plan. Around the corner on Barrack Street four more shops, Nos. 104-110, were not listed as part of the McDonald Building at first. In 1924, building approval was gained to undertake alterations to shopfronts on the corner of the building. This may have been when the parapet was continued around the corner to unite the corner tenancies into the 1898 building (more research required). By 1926, McDonald Chambers at 146 Murray Street referred to the upper floor tenants, and later the Barrack Street shops were called McDonald Building, 104 Barrack Street, all considered part of the one complex. At 2022 the McDonald Building comprises of a variety of ground floor shopfronts. The façade of decorative parapet and pediments wraps around the corner, distinguished by articulated windows with arched openings pilasters, tourelles and florid motifs, and extensive use of decorative stucco work.

WESTERN AUSTRALIAN HISTORIC THEME

STATEMENT OF SIGNIFICANCE

The place has historical significance as a two-storey commercial building dating from 1898.

It has aesthetic significance as a Federation Free style building that makes a positive contribution to the visual quality of the streetscape and is a landmark on the corner of Murray and Barrack Streets.
The place is a representative example of a commercial building constructed in Perth during the period of development and consolidation following the gold boom.

NATURE OF SIGNIFICANCE

HERCON Value A - Its importance in demonstrating the evolution or pattern of Perth's history

The place has historical significance as a two-storey commercial building dating from 1898.

HERCON Value B - Its importance in demonstrating rare, uncommon or endangered aspects of Perth's heritage

HERCON Value C - Its potential to yield information that will contribute to an understanding of Perth's history

HERCON Value D - Its importance in demonstrating the characteristics of a broader class of places

The place is a representative example of a commercial building constructed in Perth during the period of development and consolidation following the gold boom.

HERCON Value E - Any strong or special meaning it may have for any group or community because of social, cultural or spiritual associations

HERCON Value F - Its importance in exhibiting particular aesthetic characteristics valued by any group or community

It has aesthetic significance as a Federation Free style building that makes a positive contribution to the visual quality of the streetscape and is a landmark on the corner of Murray and Barrack Streets.

HERCON Value G - Any special association it may have with the life or work of a person, group or organization of importance in Perth's history

HERCON Value H - Its importance in demonstrating a high degree of creative or technical achievement

HERCON Value I - Any HERCON Value I - Any other characteristic it may have that in the opinion of the decision-making body is relevant

CONDITION AND AUTHENTICITY

Condition	Good
Building Fabric Authenticity	High. Has lost original detail at ground floor level but intact above.

HISTORY

Until the 1880s the town centre was characterised by the establishment of small cottages, shops and small businesses and was rural in character. The expansion of commerce following the discovery of gold in the 1890s put pressure on land in the centre of Perth with the result that many of the residential buildings located in the inner city were replaced with commercial buildings during this time, and the centre of Perth was substantially rebuilt. Murray Street was established along with St. Georges Terrace and Hay Street as one of the main streets of Perth from the time of colonisation in 1829 when the Perth Town Lots were surveyed and planned out.
Phineas Seeligson, pawnbroker was listed in the first post office directory published in 1893 at this Murray Street location. The building was assigned Nos. 49-53 in 1897, and then changed to Nos. 203-205 the following year. Numbering changed to today's in 1908.
Phineas Seeligson had established himself as a pawnbroker on Murray Street in 1886. The Seeligson family were well-known in Perth. The father, Henry, was born on the Polish-German border and later migrated with his family to Sydney, then relocating to Fremantle in the 1870s. He established a jewellery business and was a

prominent individual in the Jewish community, involved in the foundation of both the Fremantle and Perth Jewish congregations. His sons Phineas and Louis were also well-known and prominent members of the Jewish population. Heritage Perth research states: “Originally pawnbrokers had been associated with criminal activity and working-class drunkenness, but the industry modernised throughout the 19th century to provide short term loans, often to housewives, in exchange for property deposited as security. The inadequate resources for many working-class families during this period made the pawnbroker an essential element for the housewife to solve domestic crises.” Phineas opened another branch of his pawnbroker business at 143 Barrack Street in 1894, in a building purpose built for him to a design by prominent Western Australian architect Henry Stirling Trigg. No doubt Phineas’ wealth had grown during the 1890s gold boom and he was able to construct a new building in Murray Street as well, to replace his earlier establishment. This building was constructed in 1898, and a photograph of it appears in the papers on 7 January 1899. The builder was C. Mansfield, and the Clerk of Works was Henry Doyle of Subiaco (Subiaco’s first Mayor).In 1909 it was reported that: “One of the oldest established premises in Perth is Mr. P. Seeligson’s pawnbroking and money-lending premises. Mr. Seeligson first opened business in the year 1886, and in the same position in Murray-street, opposite the Australian Hotel, as where he still carries on his business. The present premises were specially designed for a modern pawnbroking business.” Phineas Seeligson was in business until 1919, although Phineas himself was abroad from 1908-1921. The name Seeligson is still closely associated with the Western Australian Jewish Community which benefits from their initiative and generosity. After his death in 1935 Phineas Seeligson, unmarried and very wealthy, bequeathed the greater part of his Estate to the Trusteeship of the Perth Hebrew Congregation for the purpose of helping to meet the spiritual, educational and philanthropic needs of the Jewish Community.
According to the obituary, before the first Jewish synagogue was built in 1896/97 (the organisation for which Phineas featured prominently) the Jewish community sometimes met in his Murray Street premises. The Metropolitan Water Supply Survey plan (1930) shows that like today, there is an alley off the mall on the west side, some open space at the rear of the two buildings, and then large stores at the back of the lot. A photo held at the State Library of WA dated 1984 shows the building occupied by Sportslane (clothes) and Pearse & Swan (shows).
At 2022 the building is a shoe store and a coffee supplies store.

HISTORY

The building provides banking chambers and associated offices for the Commonwealth of Australia. The Commonwealth acquired land between Murray and Wellington Street for the accommodation of government offices- General Post Office, Commonwealth Bank headquarters and Customs Department in 1911. The Customs Department wasn't built. In 1916 plans were made to create a street between Murray and Wellington Streets for a civic precinct facing the railway station. Forrest Place was created in 1924. In 1929 plans were drawn for the Commonwealth Bank building by the Commonwealth Government Architect. Construction started in 1930 and the timber was supplied by Bunnings. The building was opened in 1933 and had the latest technologies of the time.
By the 1970s the building was renovated to modernise it. In the 1980s Forrest Place was redeveloped into a civic precinct. The change in the bank's policy to be more friendly and relaxed led to the internal rooms to be more open and the banking hall to be restored to its 1930s design.
The bank has moved from this location and the ground floor has been divided into retail tenancies. The upper floors are currently used for offices.

HISTORY

There was a rapid growth in the population of Western Australia and an increase in development in the city of Perth as a result of the prosperity from the 1890s goldrush. Many of the residential buildings located in the inner city near Queen Street were replaced with commercial buildings during this time. Queen Street was first established as a private road in the early 1890s and was acquired by the City of Perth in the late 1890s which provided more land for development close to the railway. The railway was completed in 1881 and overtook the river as the primary transport method. The west end area including Queen Street, King Street, west end of Murray and Hay Streets and part of Wellington Street became the location of warehouses and commercial buildings due to their proximity to the railway.
Between World War One and the beginning of the Great Depression during a time of economic prosperity more commercial buildings were constructed in the inner city. In 1903 the location of 10-12 Queen Street was owned by Henry Truman Kelsall, a medical practitioner in Perth; and Arthur Charles Gillam, a grazier of Cherittah Station near Roebourne. In 1906 the original portion was split into two lots and an entrance way off Queen Street. Lot 1 was purchased by Laurence and Annie Alexander in 1906. Laurance Alexander was a merchant and manager of P. Falk and Co which was an importer of luxury goods from Europe. Two warehouses were built on the site by architects Austin Bastow and John C Smith. The warehouses were leased by Frederick Daniel

Sewell who was an importer and manufacturers agent, and William Mills of the Fremantle Cake and Biscuit manufacturers. Mill's company traded as Mills and Ware. The warehouse was used as a storage and dispatch location for their products which were made in their factory in Fremantle. Sewell and Mills and Ware continued to lease the warehouses at 10 and 12 Queen Street until 1918. Several tenants used the buildings between 1919 and 1923 as warehouses and office space.
The building was divided into smaller office spaces for various manufacturers and merchants, for example clothing, chemist, wholesale confectioner, photographic good supplier. In 1932 the ownership changed to Gregory Gill who was a merchant and established an office in the building. His ownership remained until 1950. No. 14 Queen Street was created with the division of 12 Queen Street as shown on a plan dated 1942. During the 1950s and 1960s alterations occurred in the building. Tenants at the time included W.L. Robins and Co, a wholesale soft goods supplier, Kolotex and WA Hospital Supplies.
During the 1990s and 2000s ownership and tenants changed to be primarily investment companies. It was used as the office during the Raine Square redevelopment and is now part of that lot (Lot 350, with an address of No. 300 Murray Street).
In 2020 a furniture show room 'Zenith' moved into the premises. The interior features include original pressed tine ceilings on the first floor, industrial beams and jarrah flooring.

HISTORY

Part of State Registered place 'William & Wellington Street Precinct' (P 16743) Between the Wentworth Hotel and the Royal Hotel on William Streets were a number of shops, (Nos. 119-139), dating from the gold boom period of development. The Metropolitan Water Supply Survey plan (1942) shows the numbers changes to 123-145 between the two hotels. Following is a description of the building from the State Register entry document for 'William & Wellington Street Precinct': "William Street Commercial Buildings, a group of two storey retail and commercial buildings, was constructed c. 1895. The group originally extended further south but in the mid-1980s three shops between 125 and 129 William Street were removed as part of the University of Western Australia's Raine Square development to allow pedestrian access to the square at the rear. During the works, remaining shop fronts were altered and modernised at ground floor level, rear outbuildings removed and rear elevations modified. "In 2006 Raine Square was redeveloped again and all but the facade of the commercial building (Nos. 131-145) adjacent to the Royal Hotel was demolished.

HISTORY

The 1920's in Perth was characterised by economic prosperity and expansion. There was considerable migration from Britain and Europe encouraged by government sponsored settlement programmes. In the city this was a period of consolidation. There was continued commercial development including the construction of arcades, hotels and commercial buildings. The Wentworth Hotel was constructed in 1928 and replaced buildings including a hotel and shops. Mary Thomas purchased the hotel which was located on the property as well as overseeing the rebuilding of the new hotel. Alterations were made to the building in 1936. Mary ran the hotel with her husband Arnold Raine, who died in 1957, until her death in 1960.The hotel was a popular venue for functions and during World War Two was used for shore leave for the United States Navy submarine crews. Further alterations were made in the 1960s

4. Building Settlements, Towns and Cities - 4.1.5 Developing city centres

STATEMENT OF SIGNIFICANCE

The place is a fine example of a commercial building in the Federation Free Classical style, with a stuccoed façade featuring a parapet and classical mouldings.
The place is sited on a prominent corner location along a major thoroughfare in the city. It has significance for its landmark quality.
The place is a component of a commercial block which forms a landmark northern entry to the central business district of Western Australia's capital city.
The place provides evidence of a period of growth following World War One, which occurred throughout Western Australia as a result of the expansion of the agricultural industry.
The place has associations with Mrs Raine who owned and ran the Hotel Wentworth and whose charitable bequest established the University of Western Australia's Raine Medical Research Foundation and subsequently Raine Square.
It was the business centre for Mary 'Ma' Thomas (later Raine), who owned it and many other properties and ran the hotel from its construction in 1928 until her death in 1960.
The place is associated with a number of architects who designed many prominent buildings in the central Perth Area, including Henry Trigg; William Garnsworthy Bennett; and Hobbs Smith and Forbes.
The place represents the transformation of the city during the Inter-War period when it was built to replace the older Gordon's Café and Hotel on the site.
The place was particularly popular for social functions during the Inter-War years and went on to provide the shore accommodation for the United States Navy submarine crews during the Second World War.
The place is representative of the consolidation of Perth from a town into a city and the place has been in continual retail and commercial use since construction.

HISTORY

The Royal Hotel was built in 1882 and extended and altered in 1894, 1906, 1926 & 1935. The hotel was constructed during a period of great change in Central Perth, firstly due to the railway line and secondly due to the gold boom. The gold boom saw the economy and the population of the state boom where a range of private buildings began to emerge and their architecture was a celebration of the discovery of gold and the prosperity of the state.

STATEMENT OF SIGNIFICANCE

The place is significant as a landmark building and as part of a streetscape of historic buildings.
The place is important as a very rare and well executed example of the Victorian Second Empire style.
The place was designed by Henry Trigg, the first Western Australia born and trained architect. Trigg was also influential in the development of the Institute of Architects.
The place is historically important for its development contiguous with the Fremantle to Guildford railway line and Perth Railway Station.
The place's progressive development from 1882 to 1906 represents the rapid increase in the prosperity and population of Western Australia as a result of the gold boom.
The place's continued operation as a hotel on this site since 1882 contributes to the community's sense of place.

HISTORY

During the 1890's and early 1900s the centre of Perth was substantially rebuilt. The period of expansion in Perth coincided with a period of economic depression in the eastern states, in particular Victoria. As a result, there was substantial migration from Victoria to WA. This migration included businessmen, architects and builders, all of whom had a considerable influence on the development of the city. Murray Street was the location of shops, factories and businesses.
The business was established in Adelaide in 1845 by Francis Hardey Faulding as a chemist and pharmacist. He imported medicines from England and produced medicines. By 1861 the company was formed after a partnership with chemist Luther Scammell and were wholesale druggists and manufacturing chemists. Faulding died in 1868.In the 1880s the business name was acquired by Scammell and his brother after losing money in speculations leading to the business facing bankruptcy. Retail shops were established to reduce the debt including one in Perth which opened in 1890. The business was originally established in Barrack Street in 1895 before moving to Murray Street. Their most famous product was Solyptol (name derived from soluble Eucalyptus oil) which was a soap made using Eucalyptus oil. In 1898 the property had been subdivided and bought by Walter Wesley Garner trading under F. H. Faulding and Co.
The building was designed by J. J. Talbot Hobbs as a warehouse in c1898. in 1907 alterations were made to the building designed by John Talbot Hobbs and constructed by Hawkins and Sands. The building was constructed

with a lift to reach the upper floors and a basement. It also had a drive-through as there wasn't a rear laneway. By September 1898 the company was trading from the new building. Two single storey buildings were constructed at the rear of the property in the late 1890s which had additional stories built by the early 1900s. These buildings were labelled factory and laboratory on plans indicating that medicines were being made onsite. The property next door 309 Murray Street was the premises of AG & FT Knox, warehousemen and importers, and was constructed before 1908. A. G. and F. T. Knox imported tobacco and similar goods to Faulding and Co. At this time many houses were being replaced by warehouses in Murray Street. Faulding was listed as the sole occupier of the building from 1930. Floor plans from 1942 show the buildings had openings in the wall between them. The Murray Street buildings became the company's administration office and showroom after a large laboratory was built in East Perth. In 1959 land was resumed at the rear of the property for the City of Perth to create a laneway.
The changes to shopping habits with the introduction of shopping centres in suburban areas led to many retailers in Perth to close. Faulding and Co. moved to Kewdale in 1973. In 1974 the building was refurbished as retail tenancies on the ground floor with office tenancies on the upper floor. Apartments were also developed in the upper floors in 1991. In 1999 the building was converted to a combined residential, retail and commercial premises.

WESTERN AUSTRALIAN HISTORIC THEME

1. Demographic settlement and mobility - 104 Land allocation and subdivision

AUSTRALIAN HISTORIC THEME

STATEMENT OF SIGNIFICANCE

The place contributes to a streetscape of predominantly two-storey rendered brick buildings constructed from 1895 to 1905 as part of the warehouse / merchant district of Perth.
The place contributes to the c1900 industrial aesthetic of Wolf Lane.
It is a remarkably intact group of buildings, especially the extent of the building developed by F.H Faulding & Co from c 1895 to 1940.It has a strong association with Adelaide pharmaceutical manufacturer F.H.Faulding & Co which established in Adelaide in 1886, opened a branch office in Perth in 1890 and went on to be an international company still in existence today.
It has a strong association with some of the well-known products of F.H. Faulding & Co including Solyptol Soap.
The place is a representative example of the Federation warehouse style architecture which was popular for commercial buildings during the gold boom period.

HISTORY

Until the 1880s the town centre was characterised by the establishment of small cottages, shops and small businesses and was rural in character. The expansion of commerce following the discovery of gold in the 1890s put pressure on land in the centre of Perth with the result that many of the residential buildings located in the inner city were replaced with commercial buildings during this time, and the centre of Perth was substantially rebuilt. Murray Street was established along with St. Georges Terrace and Hay Street as one of the main streets of Perth from the time of colonisation in 1829 when the Perth Town Lots were surveyed and planned out. It is difficult to determine the date of construction without deeper research, as there have been shops and businesses in this location since before 1893. Post Office directories show that a business was in this location from 1900 and allocated street No. 345 which changed to No. 317 in 1908. It was for Francis Wilson, coach builder. In 1908 this was the Victoria Carriage Co, operated by Greenhalgh and Caffin. In 1911, the occupant changed to J & W Bateman's and they are joined by Mt Lyell Chemical Works. This national company had new industrial works in North Fremantle and announced through the 'West Australian' newspaper in 1911 that they had secured the western half of the Murray Street building for their WA branch office, showroom and store.
In 1949, when Post Office directories ceased publication, No. 317-319 was occupied by Falk & Co., wholesale jewellers, tobacconists and fancy goods dealers. This company had been in the building since 1924. P. Falk &

Co., importers and merchants, had previously been at 223 Murray Street (now demolished). The Metropolitan Water Supply Survey plan (1942) shows the two storey building with basement, adjacent to a lane, (unnamed; now Wolf Lane). A real estate advertisement in 2022 offering the upper floor for lease shows some internal photos, including open floor space and high ceilings, some pressed tin, and timber flooring.
It is a two-storey commercial building with extensive use of classical detail to the facade which is divided into three bays with arched windows and pilasters. It has a prominent classical cornice and parapet concealing the roof. The ground floor has been altered. The original street entry was on the eastern side. A photo held at the DPLH Heritage Council dated 1986 shows the original elevation before two of the ground floor window openings were turned into entries. At this time 'Roland Smith and Co' was in letters across the facade and over the door. An earlier photo (1977) held at the State Library shows the basement lightwells at ground level.
At 2022 the ground floor is occupied by the Margaret River Chocolate Company. The Basement is occupied by a live music venue/club called 'The Sewing Room.'

Architectural Style 1 Specific	Free Classical
Architectural Style 2 General	
Architectural Style 2 Specific	
Archaeology	
Physical Description	

External - Windsor House is located on the corner of Murray and Queen Streets, with its primary elevation facing Murray Street. The building was designed in the Inter-War Free Classical Style of architecture and is essentially of brick construction with a corrugated iron gable roof. The building is not a typically designed corner building, as the street intersection is not addressed and its secondary frontage is plain in comparison to its primary façade. The building has been built in various stages, as the window heights and parapet treatments on the Murray Street elevation alter over the elevation.
The Murray Street façade is divided by its horizontal shop awnings spanning the length of the elevation. The first-floor elevation remains relatively true to its original form, and is a rendered façade containing stylized references to classical architecture. These elements include pediments and piers, which are set against the parapet wall and used to create recessed bays. Label moulds are used above the windows in the age of building closest to the Queen Street intersection. The ground floor façade of the Murray Street elevation has been modified to greater suit its modern retail requirements. The Queen Street elevation of Windsor House has undergone substantial change. However, its nine double sash windows, which are unevenly spaced over the length of the first floor, appear to be original openings and relate to the original internal layout of the building. The brickwork of the ground floor Queen Street elevation has been rendered and an aluminium framed door and aluminium windows have been inserted into the façade to service a business located in the rear of the building. These modern insertions hold no relationship to the first-floor window arrangements. Three shop awnings have also been added between the two rows of windows.

HISTORY

Until the 1880s the town centre was characterised by the establishment of small cottages, shops and small businesses and was rural in character. The expansion of commerce following the discovery of gold in the 1890s put pressure on land in the centre of Perth with the result that many of the residential buildings located in the inner city were replaced with commercial buildings during this time, and the centre of Perth was substantially rebuilt. Murray Street was established along with St. Georges Terrace and Hay Street as one of the main streets of Perth from the time of colonisation in 1829 when the Perth Town Lots were surveyed and planned out.
Windsor House was constructed in 1897-1898 as a store and warehouse for produce merchant Richard Holmes. It was originally Nos. 186-192 (1897) then Nos 346-350 (1899); numbering changed to the current system in 1908. Holmes & Co also had premises at Coolgardie and Kalgoorlie. A fire in the building in May 1898 in the portion occupied by the English Manufacturing Co., damaged part of the structure and led to the construction of substantial brick additions in late 1898 or 1899. The business continued to operate from the improved premises, and the company applied for a spirit merchant's license. Over time Holmes and Co expanded into the buildings to the west. The building was damaged in a storm in 1907 and a new two storey warehouse was constructed in the middle part of the property. In 1910, a three-storey bond store was erected to the rear of the present warehouse. It was built to be fireproof, with no timber, only brick, steel and asbestos.
Richard Holmes died in 1913, however the business he started continued to operate at the property until at least 1949 (the last publication of the post office directory). The Metropolitan Water Supply Survey plan (1942) shows that No. 324 on the corner of Queen Street has a small centrally places cellar. No. 322 had light wells on the street front, and behind it (to the north) was a large brick building, presumably the 1910 bond store. This building was later addressed as "rear 332" and had different occupants. For example, in 1936, Holmes and Co occupied 324-332 Murray Street, but the rear 332 was occupied by Jack Dyson, indenture agent.
The property was sold in 1967 to Walter Joinery Pty Ltd who held it until the 1980s. During this time, the 1910 bond store at rear 332 (Lot 1 D8217) was demolished and this space is now used for car parking. Windsor House changed hands again in 2021. It has several retail tenants at ground floor level. The upper floor is leased as office space.

HISTORY

Two shops, built around 1900, were located on Murray Street and two factories were located at the rear. The shops had various tenants including a tobacconist, tailor, and boot factory, printers and clothier located in the buildings located at the rear. From 1920 to 1930 the State Implements Works which manufactured agricultural machinery under the control of the Department of Agriculture. It was later known as the State Engineering Works. In 1931 some of the buildings were modernised. The lane between the buildings deteriorated into a dingy carpark area. The buildings were renovated in 1977 and the buildings were converted for shops, gallery and restaurant. The lane which was used for vehicles was converted to a pedestrian walkway. The conversion won an architectural award for architect R. J. Ferguson.

STATEMENT OF SIGNIFICANCE

The place is of aesthetic significance as a group of warehouse buildings grouped around a back lane. It is a rare example of an industrial precinct which features the backs of buildings rather than commercial street facades. The space between is significant both aesthetically and historically representing the past industrial history of the western end of the city.
The place is of historic significance because it reflects the way of life of the working people of Perth in the late nineteenth and early twentieth century.
The place is of historic significance because it reflects the expansion and development of commerce and trade in the City of Perth in the early years of the twentieth century.

HISTORY

The substation was constructed in 1914 to supply electricity to part of the City of Perth. The substation was part of the network of substations which linked the power meters and cables around Perth. The first electricity in Perth was generated by the Western Australian Electric Light and Power Company in 1888. In 1893 the Perth Gas Company became the main supplier after distributing gas for 10 years. The Perth City Council bought Perth Gas Company in 1911, however the State Government purchased the Perth Electric Tramways Ltd, the other major producer of electricity and proposed to enter an agreement to establish a central power station. Part of the agreement was that the Government would supply a main cable ring which had high-tension switchgear and meter panel points at substations on the main cable ring.
In 1925 some alterations were made to the building. In 1946 the State Electricity Commission was established to provide electricity to the State. It purchased the Electricity and Gas Company from the City of Perth in 1948 The building was decommissioned in the 1980s.

STATEMENT OF SIGNIFICANCE

The place was one of four electricity substations constructed by Perth City Council to operate in conjunction with the State Government's East Perth Power Station from 1916, the first centralised electricity supply in Perth, and continued to operate as an electricity substation into the twenty-first century.
The place is a good example of a utilitarian building designed in the Federation Free Classical style to fit within a city streetscape, an approach to constructing and siting industrial buildings that is no longer practised.
The place is a good representative example of electricity substations constructed in the early twentieth century, particularly those associated with the East Perth Power Station.
The J & E Ledger cast iron spiral staircase is a good example of decorative ironwork for an industrial purpose.

HISTORY

Hotel constructed in 1898 designed by N. Wolf who was the architect of His Majesty's Theatre and Hotel. The hotel dates from the period of commercial expansion in Perth following the gold rush of the 1890's. The hotel had 22 rooms and leased the hotel for many years. Renovated in 1903. In 1915 C Wake who was the proprietor at the Union Hotel in Aberdeen Street was advertised as the proprietor at the City Hotel.

STATEMENT OF SIGNIFICANCE

The place is of aesthetic significance as an example of a commercial building constructed during the period of economic affluence and increased development that followed the gold boom.
The place is of historic significance because it reflects the expansion and development of commerce and trade in the City of Perth in the early years of the twentieth century.
The place is a representative of a commercial building constructed in Perth during the period of development and consolidation following the gold boom.
The place is of aesthetic and historic significance as an example of the work of architect N. Wolf who designed His Majesty's Theatre.

NATURE OF SIGNIFICANCE

HERCON Value A - Its importance in demonstrating the evolution or pattern of Perth's history

The place is of historic significance because it reflects the expansion and development of commerce and trade in the City of Perth in the early years of the twentieth century.
The place is of aesthetic and historic significance as an example of the work of architect N. Wolf who designed His Majesty's Theatre.

HERCON Value B - Its importance in demonstrating rare, uncommon or endangered aspects of Perth's heritage

HERCON Value C - Its potential to yield information that will contribute to an understanding of Perth's history

HERCON Value D - Its importance in demonstrating the characteristics of a broader class of places

The place is a representative of a commercial building constructed in Perth during the period of development and consolidation following the gold boom.

HERCON Value E - Any strong or special meaning it may have for any group or community because of social, cultural or spiritual associations

HERCON Value F - Its importance in exhibiting particular aesthetic characteristics valued by any group or community

The place is of aesthetic significance as an example of a commercial building constructed during the period of economic affluence and increased development that followed the gold boom.
The place is of aesthetic and historic significance as an example of the work of architect N. Wolf who designed His Majesty's Theatre.

HERCON Value G - Any special association it may have with the life or work of a person, group or organization of importance in Perth's history

HERCON Value H - Its importance in demonstrating a high degree of creative or technical achievement

HERCON Value I - Any HERCON Value I - Any other characteristic it may have that in the opinion of the decision-making body is relevant

CONDITION AND AUTHENTICITY

Condition	Good
Building Fabric Authenticity	Medium level of authenticity as it is largely as originally constructed with detail intact.

CLASSIFICATION OF SIGNIFICANCE

Considerable – Category 2 - Very important to the heritage of the locality.

HISTORY

In 1890 Western Australia achieved responsible government. This, combined with the discovery of gold in the early 1890's, provided the catalyst for development in Perth. King Street was gazetted in 1845 and named after King William IV. Prior to the 1890's the area around King Street was characterised by workers' cottages with shops, coal yards, smithies and foundries located in the adjacent areas of Murray and Hay Street. In the mid 1890's some smaller businesses began to establish themselves in existing cottages and a number of larger enterprises erected substantial new offices and warehouses in the area. Earlier uses primarily served the local population, however this later development was more broadly based and was a direct response to the expansion of the city centre during the gold rush. The period from the 1890's to early decades of the twentieth century was characterised by a vigorous public works and corresponding expansion of commerce and trade. During this period, the character of the area around King Street was established. This area has recently (1990's) undergone a substantial programme of restoration and is now characterised by new uses including cafes, boutiques and professional offices. Building constructed in 1904 was partially demolished in 1929 to allow for the construction of the Red Cross House.

The period from the 1890's to early decades of the twentieth century was characterised by a vigorous public works and corresponding expansion of commerce and trade. During this period, the character of the area around King Street was established. This area has recently (1990's) undergone a substantial programme of restoration and is now characterised by new uses including cafes, boutiques and professional offices. (Notes extracted from the City of Perth property file: King St.)

The warehouse was constructed in 1905 for an importer and tea merchant. The third floor was added in 1922 and is designed to complement the original building but is simpler in form.
E S Lazarus purchased the stock, premises and business of W. A. Warehouse Co in 1902.G Wood Son and Co were located in the building in 1925 until 1952. They sold grocery products and agents for farming seed products.

Physical Description	

Three storey commercial building with simple classical detailing to the facade with strong rectangular emphasis. Facade comprising regular bays with windows with attractive detailing. Loss of original detailing at ground floor level.The building is part of a group of 12 showrooms and warehouses which were built during the period of 1905-1929. The older buildings are of load-bearing brick construction and show considerable variation within the prevailing classical style of the period. The buildings constructed after 1910 either directly continue Victorian classicism into Edwardian Classicism or else are transitions into modernist movement expressing the structure frame.

HISTORY

The building is part of a group of 12 showrooms and warehouses which were built during the period of 1905-1929. In 1900 many Chinese traders were located in the area around Munster House. Munster House was owned by James Connolly who made his fortune in mining and was a Member of the Legislative Council in 1903. The building was constructed in 1912 and was designed by Fred Upton. In 1924 a new warehouse was built on the rear of the building. Two stories were also added to the building between 1912 and 1929. In 1928/1929 the shops were demolished and a new three storey building was constructed. This was also designed by Fred Upton. It was built as an investment and had a range of tenants over the years. The Patch Theatre Group occupied part of the building between 1941 and 1961. During this time other tenants included Singer Sewing Machines, Australian Glass Company and other distribution companies. In 1952 the Red Cross acquired the building and used the second floor as offices. The Red Cross occupied the rest of the building by 1980. In 1996 the building was bought by the WA State Government for use as a centre for arts organisations and became known as the King Street Arts Centre.

Physical Description	

The original portion of Andrews House (fmr) is a good example of the Federation Free style constructed of brick. Of note is the Murray Street and Princes Lane facades, which are predominantly unpainted and as such are relatively rare in this precinct. The addition to the rear of the building is in the post war international style sympathetic to the original design. The building is in excellent condition given the recent refurbishment in 2008.Two storey brick stucco building with decorative parapet and central pediment. Prominent classical cornice, arched windows at first and ground floor levels. Original windows and door at ground floor level altered but original openings intact. The building has undergone external alterations and additions to the rear and internally to the upper floor offices and warehouse areas. The building was extended in 1953.

Builder	Massey Harris Co; W A Atkins
Other Associations	

HISTORY

The land was originally owned by George Frederick Moore in 1901 who didn't develop it. In 1911 it was bought by the Massey Harris Company. The building was constructed in 1913 from a design by William Arthur Nelson. It was built as showrooms for the Massey Harris Company which was an international agricultural equipment supplier and manufactured tractors. The company established their business in Murray Street as it was the location of other similar businesses such as motor cycle and car dealerships. The company occupied the building until 1934. After they sold the building it was occupied by a car importer, refrigerator and radio importer Pritchard Ltd. In 1941 Sewell and Poole car dealers replaced the car importers. In 1944 the building was bought by Andrew Brothers which bought and sold wool. In 1953 it was added and adapted to suit Andrew Brothers which moved from Hay Street. The building was named after this business. Andrew Brothers may have

continued to own the building until 1978, however this is unknown. Other tenants occupied the building during the 1970s including National Theatre Company who used the building as rehearsal space. In the 2000s dance school Wrightson's Dance occupied the first floor. In 2008 the building was altered to suit new tenants.

8. Developing Perth's Cultural Life - 8.10.4 Designing and building fine buildings

STATEMENT OF SIGNIFICANCE

The place is a good example of the Federation Free style in excellent condition. Its unpainted external facades are a rarity in King Street and the Murray Street streetscape. It provides the community with a sense of place because of its consistency of form since 1913. Its role in the streetscape has been acknowledged by its inclusion in the King Street heritage area.
The place is valued for its association with the business which have operated on the premises since it construction in 1913. These businesses demonstrate the evolution of this area of the city. From an area associated with the motor vehicle industry, this area of Murray Street and its surrounds have subsequently been associated with the textile industry, retailing and professional offices.
The place is associated with the firm Massey Harris Pty Ltd who were manufacturers of agricultural implements and machinery in the early part of the 20th century. The firm later merged with H.V. McKay Pty Ltd, which was a major company in the history of agricultural machinery in Australia.
The place is associated with the firm Andrews Brothers who were members of the wool and textile industry in Western Australia. The design of the addition to the place in 1953 was a result of this function and demonstrates the needs of this industry.

NATURE OF SIGNIFICANCE

HERCON Value A - Its importance in demonstrating the evolution or pattern of Perth's history

The place is valued for its association with the business which have operated on the premises since it construction in 1913. These businesses demonstrate the evolution of this area of the city. From an area associated with the motor vehicle industry, this area of Murray Street and its surrounds have subsequently been associated with the textile industry, retailing and professional offices.

HERCON Value B - Its importance in demonstrating rare, uncommon or endangered aspects of Perth's heritage

HERCON Value C - Its potential to yield information that will contribute to an understanding of Perth's history

HERCON Value D - Its importance in demonstrating the characteristics of a broader class of places

HERCON Value E - Any strong or special meaning it may have for any group or community because of social, cultural or spiritual associations

HERCON Value F - Its importance in exhibiting particular aesthetic characteristics valued by any group or community

The place is a good example of the Federation Free style in excellent condition. Its unpainted external facades are a rarity in King Street and the Murray Street streetscape. It provides the community with a sense of place because of its consistency of form since 1913. Its role in the streetscape has been acknowledged by its inclusion in the King Street heritage area.

HERCON Value G - Any special association it may have with the life or work of a person, group or organization of importance in Perth's history

The place is associated with the firm Massey Harris Pty Ltd who were manufacturers of agricultural implements and machinery in the early part of the 20th century. The firm later merged with H.V. McKay Pty Ltd, which was a major company in the history of agricultural machinery in Australia. The place is associated with the firm Andrews Brothers who were members of the wool and textile industry in Western Australia. The design of the addition to the place in 1953 was a result of this function and demonstrates the needs of this industry.

HERCON Value H - Its importance in demonstrating a high degree of creative or technical achievement

HERCON Value I - Any HERCON Value I - Any other characteristic it may have that in the opinion of the decision making body is relevant

CONDITION AND AUTHENTICITY

Condition	Good
Building Fabric Authenticity	Medium level of authenticity as it is largely as originally constructed with detail intact.

CLASSIFICATION OF SIGNIFICANCE

Considerable – Category 2 - Very important to the heritage of the locality.

HISTORY

Until the 1880s the town centre was characterised by the establishment of small cottages, shops and small businesses and was rural in character. The expansion of commerce following the discovery of gold in the 1890s put pressure on land in the centre of Perth with the result that many of the residential buildings located in the inner city were replaced with commercial buildings during this time, and the centre of Perth was substantially rebuilt. Murray Street was established along with St. Georges Terrace and Hay Street as one of the main streets of Perth from the time of colonisation in 1829 when the Perth Town Lots were surveyed and planned out. It is difficult to determine the date of construction without deeper research, as there have been shops and businesses in this location since 1893. Post Office directories show that from 1897/98 Philip Kean had a bulk store as well as a private residence on the site. It was allocated street No. 394 which changed to No. 370 in 1908. Philip Kean was an oil and colour merchant, painter and paper hanger, with a business in Barrack Street. By 1904 the place was Barnett Bros, glass, oil and colour merchants, who also had business premises in Hay Street. When the building took the current form of a two-storey building with rear warehouse is undetermined but was probably circa 1910. In 1915 it was Perth Shop Fitting Co, and there was ‘large works and showrooms’ on the site. In 1930, General Motor Sales and Services announced that their registered office was at the rear of No. 370 Murray Street. The facade of the building has stripped back detailing and may date from the Inter-War period.

In 1949, when post office directories ceased publication the site was occupied by Sidney Cooke Pty Ltd, printers, furnishers, metal stampers and wire manufacturers, and also Carter and Foley, clothing manufacturers. The Western Motor Co was 'off 370' (which means in another building at the rear).
The Metropolitan Water Supply Survey plan (1942) shows that the building Nos. 370-372 as brick, and relatively small, and beyond it was a galvanised iron structure that connected the front building with a large brick building at the rear which has a gabled roof. There was a driveway on the east side of the building to access the rear. Aerial photos show that this driveway is now part of an open aired space behind the front building, which has been maintained since the 1960s for carparking. In 2003 some trees were planted there to create a courtyard. At 2022 the refurbished building is offered for lease as office accommodation, and the advertisement online includes photos and floor plans. The rear building is an open plan warehouse, while the two-storey street front building has a modern office fit out.

HISTORY

Until the 1880s the town centre was characterised by the establishment of small cottages, shops and small businesses and was rural in character. The expansion of commerce following the discovery of gold in the 1890s put pressure on land in the centre of Perth with the result that many of the residential buildings located in the inner city were replaced with commercial buildings during this time, and the centre of Perth was substantially rebuilt. Murray Street was established along with St. Georges Terrace and Hay Street as one of the main streets of Perth from the time of colonisation in 1829 when the Perth Town Lots were surveyed and planned out. Up to 1935 this site seems to have been vacant. This part of Murray Street was dominated by car dealerships and associated service industries from the 1910s, which took over from carriage services and stabling/livery business. From c. 1915 to c. 1925 the site was adjacent to Robert Cockburn, motor builder, and the site may have been used as a work yard or car space for that business. In 1930, there was a battery service station at No. 381-385, and Bolton and Sons, motor body works at No. 397. In 1930, the service station was still at No. 381-385, and the motor garage was Croasdale's. In 1936 a new business was listed in the directory, located between them: the British General Electric Co, electrical engineers (Nos. 397-389). The following year the

business was renumbered 393 Murray Street. The new building especially for British General Electric Company was designed by architects Hobbs, Forbes and partners, and was opened by the Lieutenant-Governor Sir James Mitchell on 14 September 1936.
A photo held at the State Library of WA shows a view of British General Electric Co. Pty Ltd still in Magnet House in 1956. Electrical appliances are visible in the shop window, including lighting, a refrigerator and kettle. The photo shows that the parapet had a moulded feature with neon lights reading 'BGE' that projected at right angles to the pediment, and that the ground floor shop front was glazed from about 1ft above ground level, with a central re-entrant door.
A photo held at the State Library of WA dated 1973 shows that the building was then the Peppermint Cloud Night Club. It had a masonry front wall and arched opening which has since been removed. The place has since been the Globe Night Club, and in 2022 is Magnet House night club. The ground level entry is modified.
The parapet features simple horizontal functionalist motifs.

HISTORY

Until the 1880s the town centre was characterised by the establishment of small cottages, shops and small businesses and was rural in character. The expansion of commerce following the discovery of gold in the 1890s put pressure on land in the centre of Perth with the result that many of the residential buildings located in the inner city were replaced with commercial buildings during this time, and the centre of Perth was substantially rebuilt. Murray Street was established along with St. Georges Terrace and Hay Street as one of the main streets of Perth from the time of colonisation in 1829 when the Perth Town Lots were surveyed and planned out. The building was originally No. 435, and was likely built in 1899. Prior to this there may have been a residence occupied by Michael Daly. From 1899 the property was Wah, Hop and Co, cabinet makers. The Washing Bros moved to No. 435 Murray Street in 1902; they also had their original business further east on Murray Street. Numbering changed in 1908 to No. 407. Washing Bros was located there until 1925, when expansion meant they moved to Newcastle Street. The post office directory lists Washing Bros as ‘wholesale and retail furniture manufacturers, European labour only.’ The Washing Bros were Australian born but descended from a Chinese father (Wah Hing). Under the White Australia Policy the ‘Factories Act 1904’ prevented Asian migrants from working in manufacturing. The family (and others) overcame the Act by anglicising their names. Thus ‘Wah Hing’ became ‘Washing’, and the business overtly advertised that it only employed European labour.
The success of part-Chinese migrants in businesses is usually associated with their cultural background (such as market gardens and laundries), but success is other industries is less well-known. The Washing Bros. furniture manufacturing business was in operation from 1898 to 1953.After the building was vacated by the

Washing Brothers it was occupied by Austral Motors and then Duncan Motor Co, used car dealers; who were still there into the 1951, according to a photo held at the State Library of WA which shows the interior of the car showroom.
The Metropolitan Water Supply Survey plan (1942) shows the building as Nos. 407-409, with a driveway on the west side leading to another brick building at the rear. At 2022 the building has been renumbered to 401, and is occupied by two shops, a convenience store and a food outlet.

HISTORY

Until the 1880s the town centre was characterised by the establishment of small cottages, shops and small businesses and was rural in character. The expansion of commerce following the discovery of gold in the 1890s put pressure on land in the centre of Perth with the result that many of the residential buildings located in the inner city were replaced with commercial buildings during this time, and the centre of Perth was substantially rebuilt. Murray Street was established along with St. Georges Terrace and Hay Street as one of the main streets of Perth from the time of colonisation in 1829 when the Perth Town Lots were surveyed and planned out. In the early 1900s this area had residences, including a significant Chinese population and their businesses.
In 1912 new buildings at No. 410, the Perth Telephone Exchange, and Daniel White and Co, coach builders (No. 414) replaced these. In 1920 White and Co was sharing the location with Sedgewick Ltd, oil and colour merchants. It eventually became Clarkson Ltd, successors to Sedgewick Ltd with Charles Harper, manager.
On 10 April 1932 a disastrous fire at No. 414 Murray Street completely destroyed the building. The lane between the building and the Telephone Exchange was the only thing to save the exchange from burning, or services being interrupted. The lot was eventually sold at auction in September 1933 by Mrs. J. Sedgewick, to the Winterbottom Motor Company. It was reported that the basement and foundations of the original building remained.
In October 1933 Missen and Mills's tender of £4,374 was accepted for the erection of a new building, comprising two storeys and a basement. The architects were Oldham, Boas and Ednie Brown. In January 1934 the newspaper reported: Wentworth Motors Limited, sole W.A. distributors for Chrysler and Plymouth cars and

Fargo trucks, announce that they are moving to their new premises at 414-416 Murray Street, next to Automatic Telephone Exchange, on Tuesday next, 30th instant. The new building comprises two storeys and basement and provides most up-to-date facilities for display distribution and servicing of the lines handled by the company. A spacious new car showroom and office accommodation occupy the front portion of the ground floor, and at the rear of the offices is a used car showroom. A wide right-of-way with a natural fall to the rear of the premises, gives easy access to the basement level, which will be used for storage, spare parts and service. The Metropolitan Water Supply Survey plan (1939) shows a long narrow building with a basement, separated by a narrow laneway from the Telephone Exchange on the east. At the rear was a factory building. A photo held at the State Library of WA dated 1950 shows the building at that time, with no awning, and a façade of unpainted brick. The building was sold by auction in 1955 and was advertised in the 'Sunday Times' as a Warehouse and Showrooms: "Brick building with corrugated asbestos roof containing: First Floor offices and showrooms; ground floor and basement, containing approximately 15575 sq. ft . "The building was then occupied by H. Wilberforce & Co., electrical goods; followed by Canberra Television Services. A photo held at the State Library of WA dated 1966 captions the building as 'Airways House' and shows the name in letters on the façade. Still later, the building was the Perth Hobby Centre, and a photo undated, (c. 1990s) shows that the suspended metal awning has been added.
In 2013 the place was fitted out as a Jazz Lounge, later called the Laneway Lounge. In December 2021 after a refurbishment it opened as the Volstead Lounge, a Speakeasy style hidden bar that is accessible through a hidden door. It is a venue operated by Matt Hatton, a local music promoter and director of Mad Hatter Productions, who also operates a secret bar called 'Convenients' in another heritage building, a former house at 35 Lake Street.

STATEMENT OF SIGNIFICANCE

Wentworth Motors (fmr), 410-414 Murray Street has historical significance as a purpose-built warehouse and showroom for the Winterbottom Motor Co in 1933. It has historical significance as a work of architects Oldham, Boas and Ednie Brown. The place has aesthetic significance as an Inter-War Stripped Classical style commercial building. It makes a positive contribution to the Murray Street streetscape. It is as a representative example of a warehouse/showroom that has undergone a change of use.

NATURE OF SIGNIFICANCE

HERCON Value A - Its importance in demonstrating the evolution or pattern of Perth's history

The place has historical significance as a purpose-built warehouse and showroom for the Winterbottom Motor Co in 1933.

HERCON Value B - Its importance in demonstrating rare, uncommon or endangered aspects of Perth's heritage

HERCON Value C - Its potential to yield information that will contribute to an understanding of Perth's history

HERCON Value D - Its importance in demonstrating the characteristics of a broader class of places

It is as a representative example of a warehouse/showroom that has undergone a change of use.

HERCON Value E - Any strong or special meaning it may have for any group or community because of social, cultural or spiritual associations

HERCON Value F - Its importance in exhibiting particular aesthetic characteristics valued by any group or community

The place has aesthetic significance as an Inter-War Stripped Classical style commercial building. It makes a positive contribution to the Murray Street streetscape.

HERCON Value G - Any special association it may have with the life or work of a person, group or organization of importance in Perth's history

It has historical significance as a work of architects Oldham, Boas and Ednie Brown.

HERCON Value H - Its importance in demonstrating a high degree of creative or technical achievement

HERCON Value I - Any HERCON Value I - Any other characteristic it may have that in the opinion of the decision making body is relevant

CONDITION AND AUTHENTICITY

Condition	Fair to Good
Building Fabric Authenticity	Medium. Not intact at ground level.

CLASSIFICATION OF SIGNIFICANCE

Considerable – Category 2 - Very important to the heritage of the locality.

HISTORY

The telephone came to Western Australia in 1887, with the first manual exchange opening in a three-room cottage in Wellington Street with 12 subscribers. The Fremantle exchange opened a year later in a small room at the rear of the Town Hall and had 9 subscribers.
By 1910, the Perth manual exchange was overloaded and the Post Master General began investigating creating a new exchange. The PMG's Chief Electrical Engineer, John Hesketh, was convinced that an automatic exchange was what was needed and he was sent on an investigative trip to the USA and Europe to enquire about exchanges there. The tender for the exchange was won by the Automatic Electric Company of Chicago 'at a contract price of £42,612/10s, which included 3,350 wall telephones, 750 table phones and 40 party line 'phones, plus 100 coin-operated public telephones. As a result, the first automatic dial telephone exchange was built at 410 Murray Street in 1912. When it opened it was the biggest exchange of its kind in Australia. It continued as Perth's automatic telephone exchange right up until 1987. However it was overwhelmed from the start, and the equipment was upgraded about a year later. The building continued as Perth's automatic telephone exchange right up until 1987, when the new one opened right behind at 639 Wellington Street. The 1912 exchange was converted to offices.

WESTERN AUSTRALIAN HISTORIC THEME

HISTORY

Until the 1880s the town centre was characterised by the establishment of small cottages, shops and small businesses and was rural in character. The expansion of commerce following the discovery of gold in the 1890s put pressure on land in the centre of Perth with the result that many of the residential buildings located in the inner city were replaced with commercial buildings during this time, and the centre of Perth was substantially rebuilt. Murray Street was established along with St. Georges Terrace and Hay Street as one of the main streets of Perth from the time of colonisation in 1829 when the Perth Town Lots were surveyed and planned out. From the 1890s there were houses on this location, which survived the surrounding development up to 1927. At that time, Con Kontoolas live in a house at No. 438 Murray Street, and No. 440 was vacant (whether a vacant house or a vacant lot could be determined through deeper research).
In July 1927, a new motor company was announced that had purchased the lot adjacent to Adams Motors (442-446). Knight Motors proposed to build a motor show room and sales building, comprising one storey and a basement, but ‘strong enough to hold a second storey.’ The newspaper reported that an old house had already been demolished, but the bricks were being reused for the new structure. Knight Motors was established to promote ‘America’s most luxurious car’, the ‘Stearne Knight straight eight’ which was displayed in the showroom window of the expansive new building in March 1928. A photograph and description of the new building appears

in the 'Sunday Times', 8 April 1928 and 'The West Australian', 3 May 1928. The building had 'Knight Motors' in lettering across the central pediment, and on the front of the suspended awning.
In 1931 the building was Fiat Cars, in 1939 Auto Union Sales Ltd, motor importers, and in 1949, when post office directories ceased publication, the building was occupied by M.S. McDonald, motor car dealer.
At 2022 the building has been converted to a brewery/restaurant.

HISTORY

Murray Street was established along with St. Georges Terrace and Hay Street as one of the main streets of Perth from the time of colonisation in 1829 when the Perth Town Lots were surveyed and planned out. Until the 1880s the town centre was characterised by the establishment of small cottages, shops and small businesses and was rural in character. The expansion of commerce following the discovery of gold in the 1890s put pressure on land in the centre of Perth with the result that many of the residential buildings located in the inner city were replaced with commercial buildings during this time, and the centre of Perth was substantially rebuilt. From c. 1910 this part of Murray street began to be dominated by car dealerships and associated service industries, which took over from carriage services and stabling/livery businesses. The 1920s in Perth was characterised by economic prosperity and expansion and, this was a period of consolidation with continued commercial development.

In 1923, the 'Call' mentioned that Adams Motors Limited were "installing the latest Bowser-kerosene petrol pump in their new premises in Murray Street" which indicates the year of construction. In 1924, the Sunday Times reported that customers were invited to visit the factory to see how trucks and cars were assembled there. In 1929 the building was remodelled by architects Oldham, Boas, and Ednie Brown. Works included an up-to-date showroom direct off the footpath as well as a separate direct entrance at the front for the spare parts department. A new cantilever verandah awning was added, with new windows, and cement work finished in Donnybrook stone. Adams Motors were in this location until 1937. The Metropolitan Water Supply Survey plan (1939) shows that there was an entrance to the rear of the building off Melbourne Street. In 1940, the building

was Atkins store. In 1949 when post office directories ceased publication, the building was occupied by Lazarus and Co, wholesale tobacconist and fancy goods.
Photos held at the State Library of WA dated 1982 and 1988 shows that on each side of the building at the top were painted the words 'Homeric House', as well as lettering mounted to the front at ground/first floor level. In 1982 there was a small, suspended awning over the eastern entry doorway, and the original street level faced was intact, with six separate window openings. In the 1988 photo, the street front has been modified to three larger windows.
In 2022 part of the ground floor is a convenience store.

HISTORY

Murray Street was established along with St. Georges Terrace and Hay Street as one of the main streets of Perth from the time of colonisation in 1829 when the Perth Town Lots were surveyed and planned out. Until the 1880s the town centre was characterised by the establishment of small cottages, shops and small businesses and was rural in character. The expansion of commerce following the discovery of gold in the 1890s put pressure on land in the centre of Perth with the result that many of the residential buildings located in the inner city were replaced with commercial buildings during this time, and the centre of Perth was substantially rebuilt. From c. 1910 this part of Murray Street began to be dominated by car dealerships and associated service industries, which took over from carriage services and stabling/livery businesses. The 1920s in Perth was characterised by economic prosperity and expansion and, this was a period of consolidation with continued commercial development.

Post Office directories show that there was no business at Nos. 471 or 473 in the 1930s and prior to that the western end of Murray Street was mostly residential. No. 473 was first listed in 1940, occupied by Coca Cola Co, aerated water manufacturers. In 1944 newspapers reported that a new factory for Coca Cola was being erected on Murray Street ‘a short distance west of Milligan Street’ and that the soft drink would be made here (in the state) for the first time. Perhaps prior to this, the company had an office on the site, as the head office was in Sydney.

The new factory building had “a frontage of 45 feet and a depth of 126 feet [13.7m x 38.5m; as it stands today]. It will consist of a ground floor only, but the outer walls are being reinforced to carry an extra floor if needed.”

The architects were Powell, Cameron and Chisholm, and the builder was Mr. E. Allwood. The development was owned by J. & W. Bateman to be leased to Coca Cola. In 1949, when post office directories ceased publication, Coca Cola was still occupying the building.
A black and white photo held at the State Library of WA dated c. 1960 shows the building (No. 473) as the Dunlop flooring centre. The entry doors at right were double timber doors with glazed tops. The garage door at left was enclosed by a cyclone mesh gate. The facade was unpainted brick to dado, and smooth rendered and painted above. A photo held at the State Library of WA dated 1994 shows the building as Booker Settlements (renumbered No. 471), and it is painted a dusky pink above the grey brick dado, with red face brick below. The parapet elements are highlighted by contrasting shades of pink.
At 2022 the building is vacant and has been subject to graffiti. Behind the street façade with its garage door entry accentuated by an Art Deco style vertical pediment, is a four plane, sawtooth-roofed building. There are metal framed hopper windows along the length of the building on the laneway elevation (east). The original doors have been removed.

STATEMENT OF SIGNIFICANCE

The place has historical significance as a purpose-built factory for Coca Cola Ltd in 1944, the first Coca Cola plant in the state.
It has historical and aesthetic significance as a Post-War Functionalist style building designed by architects Powell, Cameron and Chisholm.
The place makes a positive contribution to the Murray Street streetscape.
It is a representative example of a commercial warehouse that has been adapted for another use in the city.

NATURE OF SIGNIFICANCE

HERCON Value A - Its importance in demonstrating the evolution or pattern of Perth's history

The place has historical significance as a purpose-built factory for Coca Cola Ltd in 1944, the first Coca Cola plant in the state. It has historical significance as a Post-War Functionalist style building.

HERCON Value B - Its importance in demonstrating rare, uncommon or endangered aspects of Perth's heritage

HERCON Value C - Its potential to yield information that will contribute to an understanding of Perth's history

HERCON Value D - Its importance in demonstrating the characteristics of a broader class of places

It is a representative example of a commercial warehouse that has been adapted for another use in the city.

HERCON Value E - Any strong or special meaning it may have for any group or community because of social, cultural or spiritual associations

HERCON Value F - Its importance in exhibiting particular aesthetic characteristics valued by any group or community

It has aesthetic significance as a Post-War Functionalist style building. The place makes a positive contribution to the Murray Street streetscape.

HERCON Value G - Any special association it may have with the life or work of a person, group or organization of importance in Perth's history

It has significance as a Post-War Functionalist style building designed by architects Powell, Cameron and Chisholm.

HERCON Value H - Its importance in demonstrating a high degree of creative or technical achievement

HERCON Value I - Any HERCON Value I - Any other characteristic it may have that in the opinion of the decision making body is relevant

CONDITION AND AUTHENTICITY

Condition	Fair to Good
Building Fabric Authenticity	Medium (restored and adapted).

CLASSIFICATION OF SIGNIFICANCE

Considerable – Category 2 - Very important to the heritage of the locality.

Architectural Style 2 Specific	
Archaeology	
Physical Description	

Three storey commercial, rendered brick building with reinforced concrete structure.
The curved section to the corner addresses the street corner and features a decorative curved, projection awning above the ground floor entry doors. Flat piers extend the height of the building with simplified ornamentation to the piers and to the projecting cornice. Use of angular, fan shaped keystones along the parapet which conceals the roof. The first and second floors have large areas of multi-paned double hung windows with decorative circular elements to the first floor windows. The ground floor windows have curved wrought iron security bars which are original.
The building facade retains all original detail to the facade.

HISTORY

Until the 1880s the town centre was characterised by the establishment of small cottages, shops and small businesses and was rural in character. The expansion of commerce following the discovery of gold in the 1890s put pressure on land in the centre of Perth with the result that many of the residential buildings located in the inner city were replaced with commercial buildings during this time, and the centre of Perth was substantially

rebuilt. Murray Street was established along with St. Georges Terrace and Hay Street as one of the main streets of Perth from the time of colonisation in 1829 when the Perth Town Lots were surveyed and planned out.
Perth Town Lot V38 was originally owned by Annie Elise Poncy McNess in 1912. Evidence obtained from the Certificate of Title and Perth Rate Books suggests that the land locate on the northwest corner of Murray and Milligan Streets remained vacant until McNess sold to W. D. & H. O. Wills (Australia) Ltd. in 1922.The W.D & H.O Wills warehouse and office building was designed by Oldham Boas and Ednie-Brown Architects in 1926 and constructed in 1926/27. The building showcased a number of new developments in structural techniques and material technology. It is noted for its use of mushroom shaped columns which transformed on the first-floor office quarters into elaborate classicised columns. The original plan of the building also featured a tennis court.
The W. D. & H. O. Wills (Australia) Ltd. company name was first registered for use as a trading name in Australia in July 1901. W.D. & H.O. Wills warehouse on Murray Street was associated with the tobacco industry in Western Australia from 1927 to the 1960s.
In 1967 the property was sold to Robert Frederick Hatfield and Robert Geoffrey Stanley as tenants in common. From 1967 the warehouse remained largely unoccupied. Since the 1980s numerous holding companies owned the building and at times leased the warehouse.
In 2007-2008 the building was converted into apartments with the addition of three more stories, and consolidation of the two buildings adjacent (Nos. 474 and 476). Apartment developer, Match, won a Heritage Council Award in 2009 for Adaptive Reuse of Heritage Renewal Projects.

WESTERN AUSTRALIAN HISTORIC THEME

3. Occupations - 308 Commercial services and industries

4. Building Perth (Settlements & Cities) - 4.1.4 Developing city centres
4. Building Perth (Settlements & Cities) - 4.6 Remembering significant phases in the development of settlements, towns and cities
8. Developing Perth's Cultural Life - 8.10.4 Designing & building fine buildings
8. Developing Perth's Cultural Life - 8.10.5 Advancing knowledge in science & technology

STATEMENT OF SIGNIFICANCE

The place is one of the very few extant examples illustrating the full range of features of the Interwar Chicagoesque style in Perth.
The place contributes to the streetscape in its prominent position at the intersection Murray and Milligan Streets, with the rounded façade above the main entrance hinging the two facades and complementing the intersection of the streets.
The place was one of two buildings in Perth to be configured with suspended concrete floor slabs and has rarity value in its innovative use of reinforced concrete and ‘mushroom’ columns to save building height by the elimination of beams.
The place is important for the fine articulation of the Interwar Chicagoesque facades facing Murray Street and Milligan Street, expressed in the balance between the projecting vertical members and the horizontal bands and the further refinement of the window glazing squares and circles.

NATURE OF SIGNIFICANCE

HERCON Value A - Its importance in demonstrating the evolution or pattern of Perth's history

HERCON Value B - Its importance in demonstrating rare, uncommon or endangered aspects of Perth's heritage

HISTORY

Murray Street was established along with St. Georges Terrace and Hay Street as one of the main streets of Perth from the time of colonisation in 1829 when the Perth Town Lots were surveyed and planned out. Until the 1880s the town centre was characterised by the establishment of small cottages, shops and small businesses and was rural in character. The expansion of commerce following the discovery of gold in the 1890s put pressure on land in the centre of Perth with the result that many of the residential buildings located in the inner city were replaced with commercial buildings during this time, and the centre of Perth was substantially rebuilt. From c. 1910 this part of Murray Street began to be dominated by car dealerships and associated service industries, which took over from carriage services and stabling/livery businesses. The 1920s in Perth was characterised by economic prosperity and expansion and this was a period of consolidation with continued commercial development. The western end of the city was characterised by light industrial businesses and workshops.
Percy Sara began business as a grocer at 394 William Street (c. 1915). In 1920 he partnered with Mr T.S. Cook to form Sara and Cook Ltd, a wholesale provision distributors and general merchants. They had premises at 333 Wellington Street. Sara and Cook both retired from the firm in March 1927, at which time it was re- registered as a new company (same name) under Directors Gustav Mengler and John Stephen. By 1930 Sara and Cook Ltd had moved to 577 Wellington Street from where they delivered goods (as seen in a 1931 State Library of WA

photograph of the company delivery car). In 1933, Director John Stephen and the manager of Sara and Cook were charged with tax evasion and fined.
There seemed to be no building on the site of 482-484 Murray Street until 1935, when tenders were called by architects Oldham, Boas, and Ednie-Brown to erect a new, two storey warehouse for Sara and Cook Ltd at this new location. The Metropolitan Water Supply Survey plan (1943) shows that the western side of the building was a 'passage' way, used as a laneway for vehicles to park. On 19 June 1944, the building was gutted by fire, causing £40,000 worth of damage, including a vehicle parked in the laneway at the front. The newspaper reported the company had a staff of 70 at this time.
In 1949, when post office directories ceased publication, the building was still Sara and Cook. The building displays the name of the company in raised lettering across the parapet.

HISTORY

Demolished 2007. A new building was erected at No. 497-501 Murray Street for Willys WA, motor importers. Willys had been a franchise, previously held by Adams Motors, until this entirely new firm was established. The premises was single storey, with the appearance of two shop fronts (later No. 497 and No. 501) and warehouse space behind. In 1940, No. 497 was the Australian Apple and Pear Marketing Bord, and No. 501 was Michael Malone, motor body builder. In 2007, No. 497 was Stratton Autos, car repair and car hire; and No. 501 was still Malone and Co. (See State Library of Western Australia photo dated c. 2007, 371609PD for the buildings' appearance.) Both buildings were demolished in 2007.

HISTORY

Murray Street was established along with St. Georges Terrace and Hay Street as one of the main streets of Perth from the time of colonisation in 1829 when the Perth Town Lots were surveyed and planned out. Until the 1880s the town centre was characterised by the establishment of small cottages, shops and small businesses and was rural in character. The expansion of commerce following the discovery of gold in the 1890s put pressure on land in the centre of Perth with the result that many of the residential buildings located in the inner city were replaced with commercial buildings during this time, and the centre of Perth was substantially rebuilt. From c. 1910 this part of Murray street began to be dominated by car dealerships and associated service industries, which took over from carriage services and stabling/livery businesses. The 1920s in Perth was characterised by economic prosperity and expansion and this was a period of consolidation with continued commercial development. The western end of the city was characterised by light industrial businesses and workshops.519 In 1935, W. L. Drabble, radiator expert was at No. 517. The following year a new business was listed at No. 519: Claude Neon Ltd, electrical signs. This company claimed to be the 'largest outdoor advertising organisation in the world.' It was earlier located at No. 402 Murray Street, moving in 1936.From c. 1940-1945 the place was Gibbs Bright and Co, bulk store. This company dealt in motors. In 1949, when post office directories ceased publication the building was occupied by Bruce Small Pty Ltd, bicycle manufacturers. Photos held at the State Library of WA show that the building was Wilkins Servis Pty Ltd in 1960, who sold washing machines. Interior photos in the series show there was a showroom with warehouse behind. The showroom had a linoleum floor. The warehouse had a concrete floor, no ceiling and a steel framed roof with tie-

rods. The rear exit was a barn-sized, timber ledged and braced double door. A photo held at the State Library of WA dated 2007 shows that the building was up for lease. At 2022 the building is a furniture retail business.

WESTERN AUSTRALIAN HISTORIC THEME

STATEMENT OF SIGNIFICANCE

The place has historical significance as a purpose-built warehouse for Claude Neon Ltd in 1936.
It has aesthetic significance as an Inter-War Functionalist style building.
The place makes a positive contribution to the Murray Street streetscape.
It is a representative example of a commercial warehouse that has been adapted for another use in the city.

NATURE OF SIGNIFICANCE

HERCON Value A - Its importance in demonstrating the evolution or pattern of Perth's history

The place has historical significance as a purpose-built warehouse for Claude Neon Ltd in 1936.

HERCON Value B - Its importance in demonstrating rare, uncommon or endangered aspects of Perth's heritage

HERCON Value C - Its potential to yield information that will contribute to an understanding of Perth's history

HERCON Value D - Its importance in demonstrating the characteristics of a broader class of places

It is a representative example of a commercial warehouse that has been adapted for another use in the city.

HERCON Value E - Any strong or special meaning it may have for any group or community because of social, cultural or spiritual associations

HERCON Value F - Its importance in exhibiting particular aesthetic characteristics valued by any group or community

It has aesthetic significance as an Inter-War Functionalist style building.
The place makes a positive contribution to the Murray Street streetscape.

HERCON Value G - Any special association it may have with the life or work of a person, group or organization of importance in Perth's history

HERCON Value H - Its importance in demonstrating a high degree of creative or technical achievement

HERCON Value I - Any HERCON Value I - Any other characteristic it may have that in the opinion of the decision making body is relevant

CONDITION AND AUTHENTICITY

Condition	Good
Building Fabric Authenticity	Medium.

CLASSIFICATION OF SIGNIFICANCE

Some/moderate – Category 3 - Contributes to the heritage of the locality.

HISTORY

Murray Street was established along with St. Georges Terrace and Hay Street as one of the main streets of Perth from the time of colonisation in 1829 when the Perth Town Lots were surveyed and planned out. Until the 1880s the town centre was characterised by the establishment of small cottages, shops and small businesses and was rural in character. The expansion of commerce following the discovery of gold in the 1890s put pressure on land in the centre of Perth with the result that many of the residential buildings located in the inner city were replaced with commercial buildings during this time, and the centre of Perth was substantially rebuilt. A newspaper article dated 21 August 1946 reports that: “Sir Frank Beaurepaire, founder and managing-director of the Olympic Tyre and Ruber [sic] Co. Ltd, who arrived in Perth yesterday by plane, announced that his company proposed to erect a building costing £25,000 in Murray-street, west of George-street, where a frontage of 150ft. was recently purchased. The contract for the building had been accepted. The new premises, which would be used for merchandising and selling, would be the most modern of their kind in Australia.”
The building was designed by architectural firm, Powell, Cameron and Chisholm, and the builder was E. Allwood. During the war, Olympic Tyres had made field telephone wire for the war effort. In September 1946 the ban on purchase of rubber tyres due to war time rationing was to be lifted, and the company was taking advantage of this by establishing its first branch in Western Australia. When the building was officially opened by the Deputy Premier, Mr Watts, on 7 October 1947, the newspaper stated: “The new premises are constructed of reinforced concrete and consist of offices and warehouse. The entrance is set back from the street and the

natural slope of the ground has been used to provide a loading block on the first storey at the rear. Special amenities for the staff have been provided. The building is the first major post-war building erected in the city.
"The Metropolitan Water Supply Survey plan (1953) shows the large brick building occupied by the Olympic Tyre Company Ltd. By 1961, three terraces to the west (601-603-605 Murray Street) had been demolished and the tyre company was using that area for a yard. Aerial photos show a large shed with 'Olympic General Products' painted on the roof. There was also a brick building at the rear west corner of Lot 36 which remains today. Harvest Terrace was extended through to Murray Street in the late 1960s, taking over the Olympic' yard, and creating the curved shape to Lot 36.
On 30 October 1980, the former tyre company building was opened as Baden Powell House by Premier Charles Court as the headquarters of the Scout Movement in Western Australia. A photo held at the State Library of WA dated 1983 shows the name of the building on the facade, since removed. At the time the Draft MHI was prepared in 1999 the place was still used as a scout hall. Two flag poles attached to the central pediment remain from this era. At 2022 the two storey building displays elements of the Functionalist style of architecture. It has a face brick and partly rendered facade, multi-paned steel framed windows and terrazzo steps. Part of the facade at the western end has been altered with stone facing of recent origin. The building is occupied by a gym and a 'doggie day-care.'

HISTORY

West Perth developed as suburban residential area in the late 1890s. From its inception it had the characteristics of a quality neighbourhood. Proximity to the city centre and Kings Park (then known as Perth Park), and the elevated location provided healthy site drainage as well as cooling breezes and views over the city and hills. The area had social status already associated with addresses in nearby Mount Street and access to the city's piped water system.
The area was subdivided into large residential lots for development and proceed accordingly. The homes built in West Perth from the early 1900s included prestigious mansions built in prominent locations and smaller working class cottages in the narrower back streets and towards the northern end of the area adjacent to the railway.
Tecuill House, 93 Colin Street won a Royal Australian Institute of Architects Award in 1991. It is a three storey steel framed commercial building with brick parapet walls and a steel roof. It has large areas of fixed mullion-less windows with decorative external cross bracing.

HISTORY

West Perth developed as suburban residential area in the late 1890s. From its inception it had the characteristics of a quality neighbourhood. Proximity to the city centre and Kings Park (then known as Perth Park), and the elevated location provided healthy site drainage as well as cooling breezes and views over the city and hills. The area had social status already associated with addresses in nearby Mount Street and access to the city's piped water system. The area was subdivided into large residential lots for development and proceed accordingly.
The homes built in West Perth from the early 1900s included prestigious mansions built in prominent locations and smaller working-class cottages in the narrower back streets and towards the northern end of the area adjacent to the railway. The west end of Murray Street was originally Hooper Street and extended only from Thomas Street to Outram Street. The Post Office Directory shows that the house at No. 3 (remaining today as No. 701 Murray) was first listed in 1911. The rest of the street on that side had been constructed by 1900.In the late 1960s the street alignments were adjusted and by the last 1970s, Murray Street extended from Thomas Street all the way through Hooper and Clive Streets to connect with its earlier termination at Havelock Street (hence the slight bend in the road between Colin and Havelock Streets.) This changed Hooper Street from a residential street into more of a thoroughfare connecting the CBD to West Perth and Subiaco. This area has been further transformed from residential to commercial use since the 1980s. Aerial photos show little change in the roof since 1948, but this is not original. The house was originally a single room-width with a verandah on three sides, and steps to the street at the front door, which is off centre to the east. The Metropolitan Water

Supply Survey plan (1953) shows the earlier footprint. The house has lost its side verandahs, only retaining the front. The new roof overhangs with eaves on each side. At 2022 the place is used for professional offices.

WESTERN AUSTRALIAN HISTORIC THEME

3. Occupations - 306 Domestic activities

AUSTRALIAN HISTORIC THEME

4. Building Perth (Settlements & Cities) - 4.1.2 Making suburbs
4. Building Perth (Settlements & Cities) - 4.6 Remembering significant phases in the development of Perth
8. Developing Perth (Australia's) Cultural Life - 8.12 Living in and around Australian homes

STATEMENT OF SIGNIFICANCE

The place has historic significance as a building dating from the first decade of the 1900s.
It is representative of the changing character and growth of West Perth, being a former residential property that has undergone a change of use to commercial/professional offices.
The loss of verandahs and a non-original roofline reduces its authenticity and aesthetic value; however the place contributes to the streetscape due to its scale and street setback, and acts as a reminder of the residential character of this part of Murray Street.

HISTORY

West Perth developed as suburban residential area in the late 1890s. From its inception it had the characteristics of a quality neighbourhood. Proximity to the city centre and Kings Park (then known as Perth Park), and the elevated location provided healthy site drainage as well as cooling breezes and views over the city and hills. The area had social status already associated with addresses in nearby Mount Street and access to the city's piped water system. The area was subdivided into large residential lots for development and proceed accordingly.

The homes built in West Perth from the early 1900s included prestigious mansions built in prominent locations and smaller working class cottages in the narrower back streets and towards the northern end of the area adjacent to the railway. The west end of Murray Street was originally Hooper Street and extended only from Thomas Street to Outram Street. The Post Office Directory 1910 shows that houses No. 10, 12, 14 and 20 (remaining today as Nos. 714 and 716) were listed, and that the two semi-detached pairs at Nos 2-4 and 6-8 (now 702 and 706) were listed in 1911. They appear from the street view to be identical and the directory shows that occupancy changed regularly, suggesting they were rental properties.

In the late 1960s the street alignments were adjusted and by the late 1970s, Murray Street extended from Thomas Street all the way through to connect with its earlier termination at Havelock Street. This changed Hooper Street from a residential street into more of a thoroughfare connecting the CBD to West Perth and

Subiaco. This area has been transformed from residential to commercial use since the 1980s.At 2021, No. 702-704 Murray Street is a commercial/professional tenancy, as is the adjacent No 706.

HISTORY

West Perth developed as suburban residential area in the late 1890s. From its inception it had the characteristics of a quality neighbourhood. Proximity to the city centre and Kings Park (then known as Perth Park), and the elevated location provided healthy site drainage as well as cooling breezes and views over the city and hills. The area had social status already associated with addresses in nearby Mount Street and access to the city's piped water system. The area was subdivided into large residential lots for development and proceed accordingly.

The homes built in West Perth from the early 1900s included prestigious mansions built in prominent locations and smaller working-class cottages in the narrower back streets and towards the northern end of the area adjacent to the railway. The west end of Murray Street was originally Hooper Street and extended only from Thomas Street to Outram Street. The Post Office Directory 1910 shows that houses No. 10, 12, 14 and 20 (remaining today as Nos. 714 and 716) were listed, and that the two semi-detached pairs at Nos 2-4 and 6-8 (now 702 and 706) were listed in 1911. They appear from the street view to be identical and the directory shows that occupancy changed regularly, suggesting they were rental properties.

In the late 1960s the street alignments were adjusted and by the late 1970s, Murray Street extended from Thomas Street all the way through to connect with its earlier termination at Havelock Street. This changed Hooper Street from a residential street into more of a thoroughfare connecting the CBD to West Perth and Subiaco. This area has been transformed from residential to commercial use since the 1980s.

At 2021, No. 706 Murray Street is now a commercial/professional tenancy, as is the adjacent No 702-704.

WESTERN AUSTRALIAN HISTORIC THEME

1. Demographic settlement and mobility - 104 Land allocation and subdivision

STATEMENT OF SIGNIFICANCE

The place has aesthetic significance as a Federation Queen Anne, intact former residence dating from 1910; and is enhanced by the identical property to its east.
It is an increasingly rare surviving example, and the change of use from a residential property to commercial/professional offices represents the changing character and growth of West Perth since the 1980s.

NATURE OF SIGNIFICANCE

HERCON Value A - Its importance in demonstrating the evolution or pattern of Perth's history

HERCON Value B - Its importance in demonstrating rare, uncommon or endangered aspects of Perth's heritage

It is an increasingly rare surviving example of a Federation Queen Anne, intact former residence.

HERCON Value C - Its potential to yield information that will contribute to an understanding of Perth's history

HERCON Value D - Its importance in demonstrating the characteristics of a broader class of places

The change of use from a residential property to commercial/professional offices represents the changing character and growth of West Perth since the 1980s.

HERCON Value E - Any strong or special meaning it may have for any group or community because of social, cultural or spiritual associations

HERCON Value F - Its importance in exhibiting particular aesthetic characteristics valued by any group or community

The place has aesthetic significance as a Federation Queen Anne, intact former residence dating from 1910; and is enhanced by the identical property to its east.

HERCON Value G - Any special association it may have with the life or work of a person, group or organization of importance in Perth's history

HERCON Value H - Its importance in demonstrating a high degree of creative or technical achievement
HERCON Value I - Any HERCON Value I - Any other characteristic it may have that in the opinion of the decision making body is relevant

CONDITION AND AUTHENTICITY

Condition	Good
Building Fabric Authenticity	Medium. Intact.

CLASSIFICATION OF SIGNIFICANCE

Considerable – Category 2 - Very important to the heritage of the locality.

HISTORY

West Perth developed as suburban residential area in the late 1890s. From its inception it had the characteristics of a quality neighbourhood. Proximity to the city centre and Kings Park (then known as Perth Park), and the elevated location provided healthy site drainage as well as cooling breezes and views over the city and hills. The area had social status already associated with addresses in nearby Mount Street and access to the city's piped water system. The area was subdivided into large residential lots for development and proceed accordingly.
The homes built in West Perth from the early 1900s included prestigious mansions built in prominent locations and smaller working class cottages in the narrower back streets and towards the northern end of the area adjacent to the railway. The west end of Murray Street was originally Hooper Street and extended only from Thomas Street to Outram Street. The Post Office Directory shows that the house at No. 10 (remaining today as No. 710 Murray) was first listed in 1902 and was No. 14. Numbering changed in 1908. From 1905 the house to c. 1950 the house was occupied by the Randell family. Samuel Joseph Randell was a Civil Servant, and son of the Hon. George Randell (former Perth Mayor, Member of Parliament, Congregationalist lay leader). Samuel married Charlotte Kate Scrymgour, from Adelaide. The couple celebrated 50 years of marriage in 1941. They had seven children and 12 grandchildren when Samuel died in 1942. After this and up until 1949, the year the post office directory was last published, Charlotte Randell was the main occupant. She died in 1954.The Metropolitan Water Supply Survey plan (1955) shows that the house was on a double sized block, and the area to the east of the house seemed to have been a designed garden. It had a brick and glass structure (glass

house?) and a formal pathway that may have surrounded a garden, and there was also a large open spaced, possibly grassed, area. Aerial photos show that after this survey was done, but before 1961, the current brick office was built that abuts the house.
In the late 1960s the street alignments were adjusted and by the last 1970s, Murray Street extended from Thomas Street all the way through Hooper and Clive Streets to connect with its earlier termination at Havelock Street (hence the slight bend in the road between Colin and Havelock Streets.) This changed Hooper Street from a residential street into more of a thoroughfare connecting the CBD to West Perth and Subiaco. This area has been further transformed from residential to commercial use since the 1980s.At 2022 the c. 1960 office and the former house are owned and used as professional offices for the Institution of Engineers Australia (WA branch). The reference to the buildings being called 'Science House' requires further research.

STATEMENT OF SIGNIFICANCE

The place has historic and aesthetic significance as a Federation Queen Anne, intact former residence dating from 1901. It makes a positive contribution to the streetscape which comprises of a small surviving group of Federation era former houses.
The change of use from a residential property to commercial/professional offices represents the changing character and growth of West Perth.
The attached c. 1960 office (No. 712) has little significance, detracts from the quality of the streetscape and intrudes on the aesthetic value of the former house.

HISTORY

West Perth developed as suburban residential area in the late 1890s. From its inception it had the characteristics of a quality neighbourhood. Proximity to the city centre and Kings Park (then known as Perth Park), and the elevated location provided healthy site drainage as well as cooling breezes and views over the city and hills. The area had social status already associated with addresses in nearby Mount Street and access to the city's piped water system. The area was subdivided into large residential lots for development and proceed accordingly.
The homes built in West Perth from the early 1900s included prestigious mansions built in prominent locations and smaller working-class cottages in the narrower back streets and towards the northern end of the area adjacent to the railway. The west end of Murray Street was originally Hooper Street and extended only from Thomas Street to Outram Street. The Post Office Directory shows that the house at No. 14 Hooper Street (remaining today as No. 716 Murray) was first listed in 1904. Numbering changed in 1908. The first occupant was Ernest E. Brent.
The Metropolitan Water Supply Survey plan (1953) shows a brick house with an asymmetrical front, and a half-length front verandah, with various outbuildings.
In the late 1960s the street alignments were adjusted and by the last 1970s, Murray Street extended from Thomas Street all the way through Hooper and Clive Streets to connect with its earlier termination at Havelock Street (hence the slight bend in the road between Colin and Havelock Streets.) This changed Hooper Street

from a residential street into more of a thoroughfare connecting the CBD to West Perth and Subiaco. This area has been further transformed from residential to commercial use since the 1980s.A real estate advertisement in 2015 shows some interior photos, including some original features such as fire place surrounds (although fireplaces are blocked up), high ceilings, cornices, timber floors, and a central door with coloured top and side lights. At 2022 the former house is used as medical consulting rooms.

HISTORY

Along with the site of Gloucester Park it formed part of Perth Meadow. Originally a swamp surrounded by saltbush the history acknowledges the site of Noongar places Matta Gerup (shin-deep) a shallow crossing point and Mardalup. Various interpretations of Mardalup may stem from the Noongar term mardanginy (to hunt by moonlight) the bilya waters teeming with cobber-fish or possibly derive from the Noongar word for mouse 'mardoo' which may have been present in the area. (Reference : Gnarla Boodja Mili Mili- Our Country on Paper).
The WACA Ground is the home of cricket in Western Australia but many other sports and events have been held at the ground since the first sports in 1891 including cycling, football, trotting (1913-1929), baseball, athletics to name only a few.
In 1919 Major Norman Brearley D.S.O., M.C. (later Sire Norman Brearley) used the ground for exhibition flights, his passengers reportedly included the mayor of Perth and His Excellency the Governor.
The ground was also used for patriotic purposes and in 1942 the Australian Women's Army Service used for recruit training.

Physical Description	

Gloucester Park is a harness racing sports ground comprising Trotting Track, Main Entrance and Forecourts, Enclosure Totalisator, Leger Totalisator, Switchhouse, Birdcage, Birdcage Entrance, Birdcage Kiosk, Canary Island Palms, and other associated buildings and plantings surrounding the Track, and enclosed in a masonry and chainlink mesh Perimeter Wall.
The main entrance is a large decorative gateway acting as a significant identification statement marking the entrance to the trotting ground. The structure includes a colonnade of five arches, prominent classical cornice and pediments embellished with decoration.
In 2009 approval was granted by the MRA (formally EPRA) for the general refurbishment of the JP Stratton Stand to improve viewing and overall experience for patrons at the venue. This included both some internal and external changes.
The proposed change outside of the existing building envelope is the alfresco timber deck and handrail with some additional steps. The deck faces the internal racetrack to improve the view for patrons. The internal changes include the provision of an espresso bar, relocation of new bar and kitchen and additional toilets.

HISTORY

Along with the site of the WACA Ground, Gloucester Park formed an area known as Perth Meadow and was primarily used for a race course. Gateway to Gloucester Park Trotting Track was constructed in 1929. Trotting developed in Perth as a sport for owners of small to medium businesses who were largely excluded from the upper-class sport of racing. The sport emerged amongst the businessmen who were present in the city in large number in the late nineteenth century. The earliest controls were between the horses which used to pull carts of inner city businessmen. By 1914 regular night racing was held under lights. The sport employed standard bred horses which were less expensive than racing thoroughbreds so that even modest businessmen could participate. Trotting was a prominent sport in the 1920's and provided a way of development solidarity amongst the middle classes. Frank Brennen was a prominent identity.

WESTERN AUSTRALIAN HISTORIC THEME

1. Demographic settlement and mobility - 104 Land allocation and subdivision

3. Developing City Economies - 3.11.2 Reclaiming land
3. Developing City Economies - 3.21 Entertaining for profit
8. Developing the City's Cultural Life - 8.1.1 Playing and watching organised sport
8. Developing the City's Cultural Life - 8.1.2 Betting
8. Developing the City's Cultural Life - 8.5 Forming associations
8. Developing the City's Cultural Life - 8.10.5 Advancing knowledge in science and technology

STATEMENT OF SIGNIFICANCE

The place has operated as the State's principal harness racing venue from 1929 to the present and is the oldest only remaining purpose-built harness racing ground in Perth.
The Enclosure Totalisator and Leger Totalisator provide important evidence of the housing and use of automatic mechanical calculating devices in the first half of the twentieth century. The Western Australian Trotting Association in East Perth had the first installation of this device in Australia.
The early and original buildings within the place, including the Main Entrance, Canary Island Date Palms, Enclosure and Leger Totalisators, Birdcage Kiosk and Switch House together with the Track as the organising design element, collectively form a cultural environment of historic built elements.
The arcaded Main Entrance on Nelson Crescent is valued for its Free Classical detailing and impressive scale and, with its backdrop of Canary Island Date Palms (Phoenix canariensis) and generous forecourt, has become a considerable landmark in the vicinity. The Free Classical detail of the nearby Switch House reinforces that of the Main Entrance.
The Enclosure and Leger Totalisators, with their three storey towers and symmetrical facades displaying characteristics of Federation Arts and Crafts style, collectively form a cultural environment of historic built elements which both individually and collectively have landmark value.
The evidence of the early and original development of the place is associated with individuals and organisations including James Brennan, J.P. Stratton, and the Committees and members of the Western Australian Trotting Association. Later developments are significant for their association with Sir Frank Ledger and the Western Australian Trotting Association.
The place is highly valued by the community as a landmark and social gathering place, which contributes to its sense of place, and also by the Western Australian Trotting Association, harness racing fraternity and by the community at large for the place's continuous use as a harness racing and betting venue since 1929. The Totalisators, Main Entrance, and plantings, particularly the Canary Island Date Palms, contribute to the community's sense of place as a landmark and social gathering place.

NATURE OF SIGNIFICANCE

HERCON Value A - Its importance in demonstrating the evolution or pattern of Perth's history

The place has operated as the State's principal harness racing venue from 1929 to the present and is the oldest only remaining purpose-built harness racing ground in Perth.
The Enclosure Totalisator and Leger Totalisator provide important evidence of the housing and use of automatic mechanical calculating devices in the first half of the twentieth century. The Western Australian Trotting Association in East Perth had the first installation of this device in Australia.

HERCON Value B - Its importance in demonstrating rare, uncommon or endangered aspects of Perth's heritage

HERCON Value C - Its potential to yield information that will contribute to an understanding of Perth's history

HERCON Value D - Its importance in demonstrating the characteristics of a broader class of places

HERCON Value E - Any strong or special meaning it may have for any group or community because of social, cultural or spiritual associations

The place is highly valued by the community as a landmark and social gathering place, which contributes to its sense of place, and also by the Western Australian Trotting Association, harness racing fraternity and by the community at large for the place's continuous use as a harness racing and betting venue since 1929. The Totalisators, Main Entrance, and plantings, particularly the Canary Island Date Palms, contribute to the community's sense of place as a landmark and social gathering place.

HERCON Value F - Its importance in exhibiting particular aesthetic characteristics valued by any group or community

The early and original buildings within the place, including the Main Entrance, Canary Island Date Palms, Enclosure and Leger Totalisators, Birdcage Kiosk and Switch House together with the Track as the organising design element, collectively form a cultural environment of historic built elements.
The arcaded Main Entrance on Nelson Crescent is valued for its Free Classical detailing and impressive scale and, with its backdrop of Canary Island Date Palms (Phoenix canariensis) and generous forecourt, has become a considerable landmark in the vicinity. The Free Classical detail of the nearby Switch House reinforces that of the Main Entrance.
The Enclosure and Leger Totalisators, with their three storey towers and symmetrical facades displaying characteristics of Federation Arts and Crafts style, collectively form a cultural environment of historic built elements which both individually and collectively have landmark value.

HERCON Value G - Any special association it may have with the life or work of a person, group or organization of importance in Perth's history

The evidence of the early and original development of the place is associated with individuals and organisations including James Brennan, J.P. Stratton, and the Committees and members of the Western Australian Trotting Association. Later developments are significant for their association with Sir Frank Ledger and the Western Australian Trotting Association.

HERCON Value H - Its importance in demonstrating a high degree of creative or technical achievement

HERCON Value I - Any HERCON Value I - Any other characteristic it may have that in the opinion of the decision-making body is relevant

CONDITION AND AUTHENTICITY

Condition	Good
Building Fabric Authenticity	High level of authenticity.

CLASSIFICATION OF SIGNIFICANCE

Exceptional – Category 1 - Essential to the heritage of the locality. Rare or outstanding example.

HISTORY

In 1900 thirteen names are listed in the Post Office directory for this section of Newcastle Street between Beaufort and William Streets. All buildings appear to have been residential dwellings with no commercial premises listed. The only resident whose occupation is listed is William J. Joyce. Jnr., a carpenter. The Joyce Bros. firm of builders were located in Aberdeen Street on the other side of this block. It is possible that they rented or owned the entire lot between Newcastle and Aberdeen Streets.
This building appears on the 1895 Water Map for the City of Perth. A survey of Post Office directories suggests the building may have been a combination of separate residences and apartments. Residents are listed for No. 153 (formerly No. 191), 193 and 195 for various years, with No. 193 being listed as apartments in 1935-36.
The building was constructed in c1897/1898 as a residential terrace for the Green family. The building was split into apartments during the 1930s. Members of the family continued to be associated with the place until the

1930s. In 1903 the ownership changed to A. W. Wallder a butcher whose family owned it until 1963.In 1988 was opened as Tom Burke House by the State Government as a lodging house. It is assumed that it was named after Tom Burke, a Labor politician who held the Federal seat of Perth between 1943 and 1955 and was associated with community groups.

WESTERN AUSTRALIAN HISTORIC THEME

4. Building Towns and Cities - 4.4 Living with slums, outcasts and homelessness
7. Governing - 7.6.6 Providing services and welfare

STATEMENT OF SIGNIFICANCE

The place has interest as a well detailed Federation Queen Anne style of residential building.
The place reflects the expansion and development of residential and commercial buildings on the city fringes during the rapid population increase of the 1890's gold boom and the early years of the twentieth century.
The large double storey residence set back from the street contributes to the community's sense of place.
The place is rare as an example of a substantial two storey late nineteenth century residential building still extant within close proximity to Perth City centre.
The place is representative as an example of a substantial residential building dating from the late nineteenth and early twentieth century.

HISTORY

Over the years the population of the area changed as people relocated to suburban areas of the city. As a result, Northbridge became the home for successive migrant communities. for example, communities including Greek, Italian, Chinese and more recently Vietnamese migrants have settled here as property remained relatively cheap and had the advantage of being close to the city. These communities have over the years given this area a distinctive character, generally recycling the existing buildings rather than redeveloping the area. The homes built in Perth the 1890's and early 1900's were generally larger and more elaborately detailed than the earlier simple cottages there replaced. Although influenced in their design by homes of Victoria in particular, due to the influx of migrants from the eastern states, houses in Perth tended to be constructed as single detached, or sometimes pairs of attached, houses, rather than the extensive rows of terrace houses found in eastern Australia. Houses were generally single storey brick with corrugated iron roofs. Some more prestigious homes had slate or tiled roofs. Stucco decoration was popular as was wrought iron lace and timber fretwork.
In 1897 Henry Patton was listed in the Post Office Directory as living in Ada Villa (No. 219). William O'Brien was listed as the resident for Alfred Villa (No. 221) and J. LeCornu was listed as the resident for Arthur Villa (No. 223). All buildings were owned by Thomas Bonner who continued to own them until 1930. The houses were named after his children. There were many residents in the buildings during the twentieth century. The building

was sold in 1936 to Crissafina Antonias. In 1976 the property was owned by the Metropolitan Region Planning Authority. Then to East Perth Redevelopment Authority in 2000.

WESTERN AUSTRALIAN HISTORIC THEME

1. Demographic settlement - 104 Land allocation and subdivision

AUSTRALIAN HISTORIC THEME

4. Building Towns and Cities - 4.1.2 Making suburbs

STATEMENT OF SIGNIFICANCE

The place has aesthetic significance as modestly detailed group of Federation Italianate Style residential buildings, distinguished by central pediments bearing the following names: 'Ada Villa' (No. 219), 'Alfred Villa' (No. 221) and 'Arthur Villa' (No. 223).The place is rare as an example of a group of residences, comprising two attached residences and one detached residence, in the Federation Italianate style, dating from the late nineteenth century, still extant within close proximity to Perth City centre.
The place reflects the expansion and development of a diversity of residential buildings on the city fringes during the rapid population increase of the 1890s gold boom and the early years of the twentieth century.
As a group of buildings, which have remained largely unaltered despite the changes that have occurred in the area, the place has importance in contributing to the community's sense of place.

HISTORY

In the early years of the Swan River colony the area to the north of Perth (now known as Northbridge) was low lying and swampy and was therefore settled more slowly than the better land closer to the river. It was also further from the river port and the main means of transport. Northbridge is an inner suburban area, named because it is just north of Perth across the railway bridge. It was approved as a suburb name in 1982. In 1854 some of the swampy land to the north of Perth was drained producing some fertile land for farming and later subdivision. The land was subdivided into allotments circa 1860. land in the area was taken up by discharged soldiers, artisans and small landholders. The area at this period was characterised by small cottages and businesses. In 1881, the railway from Fremantle to Guildford was opened and became the main transport route. From that period commerce and trade tended to focus more fashionable with smaller commercial enterprises and manufacturing to the north. It was less fashionable to live north of the railway line, however the area was close to the city and during the 1890's and early 1900's was substantially redeveloped with further subdivision of lots and mixed residential and commercial development. A number of trade and community organisations had their origins in the area at this time. Over the years the population of the area changed as people relocated to suburban areas of the city. As a result, Northbridge became the home for successive migrant communities. for example, communities including Greek, Italian, Chinese and more recently Vietnamese migrants have settled

here as property remained relatively cheap and had the advantage of being close to the city. These communities have over the years given this area a distinctive character, generally recycling the existing buildings rather than redeveloping the area. The homes built in Perth the 1890's and early 1900's were generally larger and more elaborately detailed than the earlier simple cottages there replaced. Although influenced in their design by homes of Victoria in particular, due to the influx of migrants from the eastern states , houses in Perth tended to be constructed as single detached, or sometimes pairs of attached, houses, rather than the extensive rows of terrace houses found in eastern Australia. Houses were generally single storey brick with corrugated iron roofs. Some more prestigious homes had slate or tiled roofs. Stucco decoration was popular as was wrought iron lace and timber fretwork.
These two dwellings are set well back from the street and at a different alignment from all other structures erected along this part of Newcastle Street. Together with other houses, long since demolished but shown on the 1950 Water and Sewerage map, they reveal what has been described as the 'haphazard' development of the city, due to inconsistent policing of building regulations. In the 1909 Post Office Directory, Mrs George Phillips is listed for No. 231 and Mrs M Alexander for No. 233.

WESTERN AUSTRALIAN HISTORIC THEME

1. Demographic settlement and mobility - 104 Land allocation and subdivision

AUSTRALIAN HISTORIC THEME

2. Peopling Perth - 2.4.2 Migrating to seek opportunity
3. Developing Perth's (local, regional & national economies - 3.19 Marketing & retailing
4. Building Perth (Settlements & Cities) - 4.1.4 Developing city centres
8. Developing Perth's Cultural Life - 8.13 Living in cities and suburbs

STATEMENT OF SIGNIFICANCE

The place is of aesthetic significance as an example of two houses constructed during the period of economic affluence and increased development that followed the gold boom. The 1890s gold boom, led to a dramatic increase in the city's population and various cottages and commercial premises, were built along the streets in the late 1890's and early 1900's.The place is of historic significance because it reflects the way of life of the working people of Perth in the late nineteenth and early twentieth century.
The place is of historic significance because it reflects the expansion and development of commerce and trade in the City of Perth in the early years of the twentieth century. The extension of tram services made the outer areas accessible and the inner-city dwellings were put up for rent.
The place has social significance as over time the area also attracted a large number of migrants who settled and established businesses. These migrant groups helped to create the distinctive cultural diversity that has become synonymous with Northbridge.
The place is of scientific significance because it has the potential to yield information through archaeological investigation.

HISTORY

In 1897 there are eight listings in the Post Office directory for the area between William and Lake Streets. These listings may include those living behind dwellings along the main street. All appear to be houses, apart from Green & Co. grocers, near the Lake Street intersection.
In 1909, Mr Thomas Bonner is listed for No. 225 and Angus McIntosh, veterinary surgeon, in No. 229. Mr Bonner was the original owner of lots Y76/77. In 1935, Thomas Dewhurst, veterinary surgeon, is listed for No. 229.There were premises behind No. 227-229. In 1935, the furniture manufacturers, Sunshine Veneer Works, was located there.
A women's health centre is currently located in the building.

HISTORY

In 1881, the railway from Fremantle to Guildford was opened and became the main transport route. From that period commerce and trade tended to focus more fashionable with smaller commercial enterprises and manufacturing to the north. It was less fashionable to live north of the railway line, however the area was close to the city and during the 1890's and early 1900's was substantially redeveloped with further subdivision of lots and mixed residential and commercial development. A number of trade and community organisations had their origins in the area at this time. Over the years the population of the area changed as people relocated to suburban areas of the city. As a result, Northbridge became the home for successive migrant communities. for example, communities including Greek, Italian, Chinese and more recently Vietnamese migrants have settled here as property remained relatively cheap and had the advantage of being close to the city. These communities have over the years given this area a distinctive character, generally recycling the existing buildings rather than redeveloping the area. The homes built in Perth the 1890's and early 1900's were generally larger and more elaborately detailed than the earlier simple cottages there replaced. Although influenced in their design by homes of Victoria in particular, due to the influx of migrants from the eastern states , houses in Perth tended to be constructed as single detached, or sometimes pairs of attached, houses, rather than the extensive rows of terrace houses found in eastern Australia. Houses were generally single storey brick with corrugated iron roofs. Some more prestigious homes had slate or tiled roofs. Stucco decoration was popular as was wrought iron lace and timber fretwork.

The building was erected in 1905 for Mr William Schruth, who was also the owner/proprietor of the Beaufort Arms Hotel on the corner of Beaufort and Newcastle Streets. In 1909, No. 237 was used as a store for wine and spirits, while No. 235 was used by J. W. Wing, cabinet maker. In 1935, Wing Ltd, cabinet maker, is listed for the building.

WESTERN AUSTRALIAN HISTORIC THEME

HISTORY

In the early years of the Swan River colony the area to the north of Perth (now known as Northbridge) was low lying and swampy and was therefore settled more slowly than the better land closer to the river. It was also further from the river port and the main means of transport. Northbridge is an inner suburban area, named because it is just north of Perth across the railway bridge. It was approved as a suburb name in 1982. In 1854 some of the swampy land to the north of Perth was drained producing some fertile land for farming and later subdivision. The land was subdivided into allotments circa 1860. land in the area was taken up by discharged soldiers, artisans and small landholders. The area at this period was characterised by small cottages and businesses. In 1881, the railway from Fremantle to Guildford was opened and became the main transport route. From that period commerce and trade tended to focus more fashionable with smaller commercial enterprises and manufacturing to the north. It was less fashionable to live north of the railway line, however the area was close to the city and during the 1890's and early 1900's was substantially redeveloped with further subdivision of lots and mixed residential and commercial development. A number of trade and community organisations had their origins in the area at this time. Over the years the population of the area changed as people relocated to suburban areas of the city. As a result, Northbridge became the home for successive migrant communities. for example, communities including Greek, Italian, Chinese and more recently Vietnamese migrants have settled here as property remained relatively cheap and had the advantage of being close to the city. These communities have over the years given this area a distinctive character, generally recycling the existing buildings rather than

redeveloping the area. The homes built in Perth the 1890's and early 1900's were generally larger and more elaborately detailed than the earlier simple cottages there replaced. Although influenced in their design by homes of Victoria in particular, due to the influx of migrants from the eastern states , houses in Perth tended to be constructed as single detached, or sometimes pairs of attached, houses, rather than the extensive rows of terrace houses found in eastern Australia. Houses were generally single storey brick with corrugated iron roofs. Some more prestigious homes had slate or tiled roofs. Stucco decoration was popular as was wrought iron lace and timber fretwork.

HISTORY

Newcastle Street was developed in the 1890s and reflects the expansion and development of residential and commercial buildings on the city fringes during the rapid population increase of the 1890s gold boom and the early years of the twentieth century. The demographic character of the city fringe changed as expansion of transport services enabled the more well-to-do members of society to move further afield to newly developed suburbs. The increase in population also led to speculators building investment properties for rental purposes. The cottages at 295 and 299 Newcastle Street are located on Lot Y166 which is registered in the City's rate books for 1891 as being owned by Mr J. J. Talbot Hobbs, the eminent architect and soldier. He acquired lots Y166 and 167 in c.1891-92. It is probable the houses were erected for investment purposes. Whether Talbot Hobbs designed the houses has not been established. No 295 was originally No. 229, changing to 295 in 1908. It is listed in the Post Office Directories from 1895.The Metropolitan Water Supply Survey plan dated 1949 shows two houses as a mirror image of each other, with full length front verandahs and half-length verandahs at the rear.No. 299 is part of the Talbot Hobbs Heritage Trail, which also includes No. 295 and No. 305 Newcastle Street, and No. 22 Palmerston Street. In the late 1990s the Graham Farmer Freeway tunnel was built underneath this section of Northbridge, necessitating demolition of many houses. Three of the four buildings were earmarked for demolition when the Government stepped in to preserve them. The properties were made structurally sound by the East Perth Redevelopment Authority as a part of The Village Northbridge project. On

15 June 2003, Minister for Planning and Infrastructure Alannah MacTiernan unveiled a bronze plaque in the pavement at the corner of Newcastle and Palmerston Streets to officially identify the heritage precinct.B4 etween 2006 and 2008 a two-storey development was built to the rear of 295 and 299. Both houses were reroofed and adjoined by an entrance with the address 299 Newcastle. Former No. 295 is called Talbot and former No. 299 is called Hobbs. They are now used for commercial/ office purposes.

WESTERN AUSTRALIAN HISTORIC THEME

3. Occupations - 306 Domestic activities
6. People - 605 Famous and infamous people

AUSTRALIAN HISTORIC THEME

8. Developing Perth (Australia's) Cultural Life - 8.12 Living in and around Australian homes

STATEMENT OF SIGNIFICANCE

The place has aesthetic and historic significance as a detailed Federation Bungalow built c. 1895.
It forms an integral part of a group of residential buildings that contribute to the historic character of the area that is associated with J.J. Talbot Hobbs, the eminent architect and soldier, who developed these properties.
The place is rare as an example of a late nineteenth century residential building still extant within close proximity to the Perth City centre.
It is a representative example of a residence in the outer city area that has been converted to offices.

NATURE OF SIGNIFICANCE

HERCON Value A - Its importance in demonstrating the evolution or pattern of Perth's history

The place has historic significance as a detailed Federation Bungalow built c. 1895.

HERCON Value B - Its importance in demonstrating rare, uncommon or endangered aspects of Perth's heritage

The place is rare as an example of a late nineteenth century residential building still extant within close proximity to the Perth City centre.

HERCON Value C - Its potential to yield information that will contribute to an understanding of Perth's history

HERCON Value D - Its importance in demonstrating the characteristics of a broader class of places

It is a representative example of a residence in the outer city area that has been converted to offices.

HERCON Value E - Any strong or special meaning it may have for any group or community because of social, cultural or spiritual associations

HERCON Value F - Its importance in exhibiting particular aesthetic characteristics valued by any group or community

The place has aesthetic significance as a detailed Federation Bungalow built c. 1895.

HERCON Value G - Any special association it may have with the life or work of a person, group or organization of importance in Perth's history

It forms an integral part of a group of residential buildings that contribute to the historic character of the area that is associated with J.J. Talbot Hobbs, the eminent architect and soldier, who developed these properties.

HERCON Value H - Its importance in demonstrating a high degree of creative or technical achievement

HERCON Value I - Any HERCON Value I - Any other characteristic it may have that in the opinion of the decision making body is relevant

CONDITION AND AUTHENTICITY

Condition	Good
Building Fabric Authenticity	High level of authenticity as it is largely as originally constructed with detail intact. Infill panels to front verandah not original.

CLASSIFICATION OF SIGNIFICANCE

Considerable – Category 2 - Very important to the heritage of the locality.

HISTORY

Newcastle Street was developed in the 1890s and reflects the expansion and development of residential and commercial buildings on the city fringes during the rapid population increase of the 1890s gold boom and the early years of the twentieth century. The demographic character of the city fringe changed as expansion of transport services enabled the more well-to-do members of society to move further afield to newly developed suburbs. The increase in population also led to speculators building investment properties for rental purposes. This cottage is located on Lot Y166 which is registered in the City's rate books for 1891 as being owned by Mr J.J. Talbot Hobbs, the eminent architect and soldier. The Hobbs acquired lots Y166 and 167 in c.1891-92. The previous owner appears to have been the surgeon, Edward Scott. It is probable the house was erected for investment purposes. Whether Talbot Hobbs designed the place has not been established. In 1909, the Campbells lived in the house. No. 299 was originally No. 231, then 297, changing to 299 in 1909. It is listed in the Post Office Directories from 1895.The Metropolitan Water Supply Survey plan dated 1949 shows two houses as a mirror image of each other, with full length front verandahs and half-length verandahs at the rear. In the late 1990s the Graham Farmer Freeway tunnel was built underneath this section of Northbridge, necessitating demolition of many houses. Three of the four buildings were earmarked for demolition when the Government stepped in to preserve them. The properties were made structurally sound by the East Perth Redevelopment Authority as a part of The Village Northbridge project. On 15 June 2003, Minister for Planning

and Infrastructure Alannah MacTiernan unveiled a bronze plaque in the pavement at the corner of Newcastle and Palmerston Streets to officially identify the heritage precinct.
Between 2006 and 2008 a two-storey development was built to the rear of 295 and 299. Both houses were reroofed and adjoined by an entrance with the address 299 Newcastle. Fmr No. 295 is called Talbot and Fmr No. 299 is called Hobbs. They are now used for commercial/ office purposes.

WESTERN AUSTRALIAN HISTORIC THEME

1. Demographic settlement and mobility - 107 Settlements

STATEMENT OF SIGNIFICANCE

The place has interest as a modestly detailed Federation Bungalow style of residential building.
The place forms an integral part of a group of residential buildings and contributes to the historic character of the area.
The place reflects the expansion and development of residential and commercial buildings on the city fringes during the rapid population increase of the 1890's gold boom and the early years of the twentieth century.
The place represents the changing demographic character of the city fringe of Perth as expansion of transport services enabled the more well-to-do members of society to move further afield to newly developed suburbs.
The place represents the changing character of the local community from the typically heterogeneous population of the gold boom of the 1890's to the increasing concentration of ethnic minorities in the course of the twentieth century.
The place is associated with J.J. Talbot Hobbs, the eminent architect and soldier.
The single storey residence forms part of a streetscape that contributes to the community's sense of place.
The place is rare as an example of a late nineteenth century residential building still extant within close proximity to Perth City centre.
The place is representative as an example of a modest residential building dating from the late nineteenth century.

NATURE OF SIGNIFICANCE

HERCON Value A - Its importance in demonstrating the evolution or pattern of Perth's history

The place reflects the expansion and development of residential and commercial buildings on the city fringes during the rapid population increase of the 1890's gold boom and the early years of the twentieth century. The place represents the changing demographic character of the city fringe of Perth as expansion of transport services enabled the more well-to-do members of society to move further afield to newly developed suburbs. The place represents the changing character of the local community from the typically heterogeneous population of the gold boom of the 1890's to the increasing concentration of ethnic minorities in the course of the twentieth century.

HERCON Value B - Its importance in demonstrating rare, uncommon or endangered aspects of Perth's heritage

The place is rare as an example of a late nineteenth century residential building still extant within close proximity to Perth City centre.

HERCON Value C - Its potential to yield information that will contribute to an understanding of Perth's history

Builder	
Other Associations	

HISTORY

The building was constructed in 1907 and consisted of a shop on the ground floor with a residence above. During the late 1890s during the gold rushes the area was developed as people bought property as an investment. The property was owned by George Shenton until 1888 when it was bought by James MacKay. In 1902 it was the residence of Dr William Trethowan. He was the President of the WA Branch of St John's Ambulance which had its headquarters at No. 120 Aberdeen Street. The first tenant was William Newman who ran a furniture business until the 1920s. It is assumed that the tenant of the shop also occupied the residence. From the 1920s various tenants occupied the shop and residence.
The property was acquired by the State Government in 1987 as part of the planned north bypass. The shop was rented to various tenants. Wallpaper businesses were located in the building. The business closed in 1998.

4. Building Cities - 4.1.2 Making suburbs

STATEMENT OF SIGNIFICANCE

The place has aesthetic significance as a fine example of an elaborately detailed two storey commercial and residential building in the Federation Free Classical style which remains substantially intact.
The place is rare as an example of a two-storey commercial building dating from the early twentieth century which was constructed in conjunction with an attached two storey residence.
The place is a fine example of the type of substantial commercial building erected following the gold boom years in Western Australia and reflects the expansion of commercial and housing opportunities in the city of Perth in the area north of the railway line; and, by virtue of its elaborate detailing and prominent corner location, the place is a Northbridge landmark.

HISTORY

The Washing Brothers' furniture manufacturing business began in 1898 in Perth. The brothers were Alfred, Charles, Ernest and Frederick, and were Australian born, descended from a Chinese father (Wah Hing) and a European mother. Under the White Australia policies from 1901 which enabled inherently racist legislation, the 'Factories Act 1904' prevented Asian migrants from working in manufacturing. The part-Chinese Washing family (and others) overcame the Act by anglicising their names. Thus 'Wah Hing' became 'Washing'. The Act was enforced regularly. For example, an article in the 'Daily News' in 1918 reported: "A very important regulation affecting Asiatic manufacturers of goods in the State is that such goods must be stamped stating that Asiatic labor [sic] and hands made the goods. For evading this regulation, Gooey Tong, representing Wah Hing and Co., furniture manufacturers, was fined £1.10s and costs this morning at the City Court." In another example, in 1922, the furniture made by Wah Hing and Co was restamped by Ernest Johnson, for sale in his outlet, which was in breach of the Act. (Daily News, 1922).
The Washing Bros. were originally located at 271 Murray Street in Perth between Barrack and William. They moved to No. 435 Murray Street in 1902 (between King and Milligan Streets) which was renumbered as No. 407

Murray Street in 1908. As the business expanded new premises were required. The post office directory lists three new shops being built on Newcastle Street in 1923, and from 1924 Washing Bros. furniture manufacturers were located at Nos. 323-333 Newcastle Street. The advertisement in the Trades Directory in 1930 shows that among the furniture manufacturers in Perth at this time there remained Wah Hing & Co, at 14-16 Railway Parade, West Perth, as well as the Washing Bros. The continued systemic racism as created by the Factories Act is evident in another newspaper article in 1930, which is related to the Washing name: “The Perth City Council yesterday agreed to a recommendation from the general purposes committee that a quotation from Washing Bros, of 35/ each for the supply and delivery to the Victoria Park Town Hall of 38 seats with backs be accepted. At the previous meeting of the council, following an objection in regard to the type of labour employed by the firm, the matter was referred back to the committee for further consideration and report. The Town Clerk (Mr. W. E. Bold) yesterday read the following report from the committee: — With a view to placing the facts in connection with the employees of Washing Bros, before the committee, the chairman and the Town Clerk have interviewed the secretary of the union (Mr. Hodsdon) and the Acting Chief Inspector of Factories (Mr. Flemming). We are informed by the latter that last month Washing Bros, employed 29 men, including apprentices. Of this number, all are British or Australian, except one Greek, one Russian, two Czechoslovakians and one Palestine Jew. There are no Chinese. Mr. Washing, senior, is Australian born, a son of a Chinese father and a European mother. He has one son and a nephew in the business, both born in Australia. The secretary of the union states that there is another son in the business, also born in Australia. There are ten apprentices, all Australian-born. The Acting Chief Inspector of Factories states that Washing Bros, are a white-labour firm, are contractors for Government furniture supplies under the Tender Board rules and regulations, and comply with the provisions of the Shops and Factories Act in respect to the stamping of furniture made in their factory. He adds that the furniture made by Washing Bros, is marked with a stamp that it is made by white labour. Section 95 of the Act states that where manufacture or preparation has been effected solely or partly by the labour of any Asiatic employee the stamp shall set forth in legible type the words, 'Asiatic labour.' The Inspector points out that neither of these stamps is applicable in the case of Washing Bros., because they do in fact employ one or more Palestine Jews. In the opinion of the Crown Law Department, these men cannot be properly de-scribed as either Europeans or Asiatics, because being Jews, they are of the Semitic race. The department, therefore, permits them to use the stamp, 'White labour.' The recommendation was adopted by 13 votes to 8.” The Metropolitan Water Supply Survey plan (1950) shows a large brick building, unnumbered adjacent to Nos. 335-337 which was a semi-detached pair of houses. There is a dust hopper in the rear and other structures to the south and east. The two-storey factory was damaged by fire in April 1953. The 1965 aerial shows the factory had been demolished and redeveloped.
The success of part-Chinese migrants in businesses is usually associated with their cultural background (such as market gardens and laundries), but success is other industries is less well-known. The Washing Bros. furniture manufacturing business was in operation from 1898 to 1953. The contribution of the Washing Bros is partly acknowledged by nearby Washing Lane, but no interpretation is given to this nomenclature. The site provides an opportunity to acknowledge this historic building legacy.

HISTORY

In the early years of the Swan River colony the area to the north of Perth (now known as Northbridge) was low lying and swampy and was therefore settled more slowly than the better land closer to the river. It was also further from the river port and the main means of transport. in 1854 some of the swampy land to the north of Perth was drained producing some fertile land for farming and later subdivision. The land was subdivided into allotments circa 1860. Land in the area was taken up by discharged soldiers, artisans and small landholders. The area at this point was characterised by small cottage and businesses. In 1881 the railway from Fremantle to Guildford was opened and became the main transport route. From that period commerce and trade to focus more fashionable with smaller commercial enterprises and manufacturing to the north. It was less fashionable to live north of the railway line, however the area was close to the city and during the 1890s and early 1900s was substantially redeveloped with further subdivision of lots and mixed residential and commercial development. A number of trade and community organisations had their origins in the area at this time. Over the years the population of the area changed as people relocated to suburban areas of the city. As a result, Northbridge became the home for successful migrant communities. For example, communities including Greek, Italian, Chinese and more recently Vietnamese migrants have settled here as property remained relatively cheap and had the advantage of being close to the city. These communities have over the years given this area a distinctive character, generally recycling the existing buildings rather than redeveloping the area. This place may

date from the early to mid-1890s, as it appears on an early water map for the city dated around 1896. There were various residents over the years.

HISTORY

In the early years of the Swan River colony the area to the north of Perth (now known as Northbridge) was low lying and swampy and was therefore settled more slowly than the better land closer to the river. It was also further from the river port and the main means of transport. Northbridge is an inner suburban area, named because it is just north of Perth across the railway bridge. It was approved as a suburb name in 1982. In 1854 some of the swampy land to the north of Perth was drained producing some fertile land for farming and later subdivision. The land was subdivided into allotments circa 1860. Land in the area was taken up by discharged soldiers, artisans and small landholders. The area at this period was characterised by small cottages and businesses. In 1881, the railway from Fremantle to Guildford was opened and became the main transport route. From that period commerce and trade tended to focus more fashionable with smaller commercial enterprises and manufacturing to the north. It was less fashionable to live north of the railway line, however the area was close to the city and during the 1890's and early 1900's was substantially redeveloped with further subdivision of lots and mixed residential and commercial development. A number of trade and community organisations had their origins in the area at this time. Over the years the population of the area changed as people relocated to

suburban areas of the city. As a result, Northbridge became the home for successive migrant communities. for example, communities including Greek, Italian, Chinese and more recently Vietnamese migrants have settled here as property remained relatively cheap and had the advantage of being close to the city. These communities have over the years given this area a distinctive character, generally recycling the existing buildings rather than redeveloping the area. The homes built in Perth the 1890's and early 1900's were generally larger and more elaborately detailed than the earlier simple cottages there replaced. Although influenced in their design by homes of Victoria in particular, due to the influx of migrants from the eastern states, houses in Perth tended to be constructed as single detached, or sometimes pairs of attached, houses, rather than the extensive rows of terrace houses found in eastern Australia. Houses were generally single storey brick with corrugated iron roofs. Some more prestigious homes had slate or tiled roofs. Stucco decoration was popular as was wrought iron lace and timber fretwork. No. 351 (or 279 in 1900) is listed as the home of Mrs E Birch (nurse) and Mr William Birch, then Mrs Birch only in 1909 when the house is recorded as 351. Mr John Mills lived in No. 353 (281) in 1900 and Mrs Tolly (or Telly) in 1909.

HISTORY

Since the 1890s, this site has been used for various commercial undertakings. Thomas McLaughlin is recorded in 1897 as a firewood dealer, with subsequent listings in the Post Office directories as a fuel merchant and lime merchant. In 1909, Mr J Harvey, a cab proprietor, is listed, possibly sharing the premises with McLaughlin. There were also stables on the site, possibly before the listed date of 1919-1920. In 1919 Mr R L Barry, a dairy producer, operated nearby, either to the west of McLaughlin, or behind, where Bertram Street was once located, before the construction of the Northbridge Tunnel in 1999.The place has been recently used as a car wash, cafe and function hall.

HISTORY

In the early years of the Swan River colony the area to the north of Perth (now known as Northbridge) was low lying and swampy and was therefore settled more slowly than the better land closer to the river. It was also further from the river port and the main means of transport. Northbridge is an inner suburban area, named because it is just north of Perth across the railway bridge. It was approved as a suburb name in 1982. In 1854 some of the swampy land to the north of Perth was drained producing some fertile land for farming and later subdivision. The land was subdivided into allotments circa 1860. land in the area was taken up by discharged soldiers, artisans and small landholders. The area at this period was characterised by small cottages and businesses.
In 1881, the railway from Fremantle to Guildford was opened and became the main transport route. From that period commerce and trade tended to focus more fashionable with smaller commercial enterprises and manufacturing to the north. It was less fashionable to live north of the railway line, however the area was close to the city and during the 1890's and early 1900's was substantially redeveloped with further subdivision of lots and mixed residential and commercial development. A number of trade and community organisations had their origins in the area at this time. Over the years the population of the area changed as people relocated to suburban areas of the city. As a result, Northbridge became the home for successive migrant communities. for example, communities including Greek, Italian, Chinese and more recently Vietnamese migrants have settled here as property remained relatively cheap and had the advantage of being close to the city. These communities

have over the years given this area a distinctive character, generally recycling the existing buildings rather than redeveloping the area. Example of a commercial building constructed in Perth during the period of expansion and development that followed the gold rush of the 1890's.
In 1922 the building was constructed for James McConnell. The property could have been owned by William Padbury as his name was also listed in the Rates Book for the property. Various tenants occupied the shops, with the bootmaker Alfred Hadley the longest tenant, occupying a shop until 1940. Other tenants included a hairdresser, plumber, fish merchant. During the 1930s and 1940s migrants from Europe established businesses in the building. The property was sold in 1938 by Padbury to Gerald Charles. The ownership changed again in 1944. In 1975 the State Government acquired the property and leased the shops to various tenants. A Chinese herbalist has operated from the shops since 1987.

WESTERN AUSTRALIAN HISTORIC THEME

1. Demographic settlement and mobility - 101 Immigration, emigration and refugees
3. Occupations - 308 Commercial and service industries

AUSTRALIAN HISTORIC THEME

3. Developing local regional and national economies - 3.19 Marketing and retailing

STATEMENT OF SIGNIFICANCE

The place is a distinctive and highly intact example of a single storey row of shops, dating from the Inter-War period, in close proximity to the City of Perth, which has retained its external shopfront detailing, in particular the glazed shopfronts, timber framed re-entrant doors and truncated corner entry.
The place, situated on the corner of Newcastle and Fitzgerald streets, and distinguished by its roughcast arched parapets with tripartite timber vents to the truncated corner and to the prominent parapet, which resembles a Dutch gable, on the Newcastle Street elevation, is a recognised landmark building in the Northbridge area.
The changing occupancy of the shops by proprietors of different ethnic backgrounds reflects the social and cultural changes that have occurred in Northbridge and the changing focus of the commercial life of the area.
The place reflects the expansion of commercial development in the city of Perth in the area north of the railway line in the years following World War Two.
The place is an example of an Interwar building, which incorporates detailing from earlier architectural styles, most notably the Federation Arts and Crafts style, in a romantic fashion.

HISTORY

West Perth developed as suburban residential area in the late 1890s. From its inception it had the characteristics of a quality neighbourhood. Proximity to the city centre and Kings Park (then known as Perth Park), and the elevated location provided healthy site drainage as well as cooling breezes and views over the city and hills. The area had social status already associated with addresses in nearby Mount Street and access to the city's piped water system. The area was subdivided into large residential lots for development and proceed accordingly. The homes built in West Perth from the early 1900s included prestigious mansions built in prominent locations and smaller working-class cottages in the narrower back streets and towards the northern end of the area adjacent to the railway.
The Metropolitan Water Supply Survey plan (1954) and aerial photos show that there were three houses between Havelock and Emerald Streets on the north side of Ord Street: from east to west, Nos. 4, 6 and 10. (The house on the corner of Havelock was No. 21 Havelock Street.) In 2022 only one house remains: the house that was originally No. 4, and is now No. 6, situated between two modern office buildings. Numbering was different before 1908, but this house was not built until 1920. The other two houses were established a lot earlier, c. 1905. Post Office directories first lists this house in 1921, occupied by William Horgan, who was still listed as the main occupant in 1945. Aerial photos show that between 1985 and 1995 two chimneys at the back

half of the house were removed, and/or the roof was replaced. There has also been an extension of floor space to the rear of the house. A photo held at the State Library of WA dated 1991 shows a tall chimney at the front, since removed. At the time the place was referred to as 'Jacaranda House.' The walls were rough caste painted render which has since been removed to eaves height. Solar panels were added to the roof in 2019 and are intrusive as they are visible from the street.
At 2022 the place is a single storey building with a combination hipped and gable roof. The street facing gable has a ventilation louvre to the roof space. The walls to eaves level are face red brick. There is a tiled awning to the south facing window under the gable, supported by timber brackets, with ornamental decoration above. The verandah roof is supported by simple timber structures in pairs. There are stained leadlight glass windows, mullioned in some instances.
A current real estate advertisement online for leasing the house as professional offices shows photos of the interior. The place retains some original features such as coloured leadlight windows, high ceilings, fireplaces, and mantles.

STATEMENT OF SIGNIFICANCE

The place has aesthetic significance as a Federation Bungalow house dating from 1920.
It has historic significance because it reflects the period of affluence and optimism following the end of World War One and is a reminder of the once residential character of West Perth.
It is as a representative example of a residential property in West Perth that has undergone a change of use to commercial/professional offices with the changing character and growth of the City.
The place makes a positive contribution to the Ord Street streetscape.

NATURE OF SIGNIFICANCE

HERCON Value A - Its importance in demonstrating the evolution or pattern of Perth's history

It has historic significance because it reflects the period of affluence and optimism following the end of World War 1 and is a reminder of the once residential character of West Perth.

HERCON Value B - Its importance in demonstrating rare, uncommon or endangered aspects of Perth's heritage

HERCON Value C - Its potential to yield information that will contribute to an understanding of Perth's history

HERCON Value D - Its importance in demonstrating the characteristics of a broader class of places

It is as a representative example of a residential property in West Perth that has undergone a change of use to commercial/professional offices with the changing character and growth of the City.

HERCON Value E - Any strong or special meaning it may have for any group or community because of social, cultural or spiritual associations

HERCON Value F - Its importance in exhibiting particular aesthetic characteristics valued by any group or community

The place has aesthetic significance as a Federation Bungalow house dating from 1920.
The place makes a positive contribution to the Ord Street streetscape.

HERCON Value G - Any special association it may have with the life or work of a person, group or organization of importance in Perth's history

HERCON Value H - Its importance in demonstrating a high degree of creative or technical achievement

HERCON Value I - Any HERCON Value I - Any other characteristic it may have that in the opinion of the decision making body is relevant

CONDITION AND AUTHENTICITY

Condition	Very Good
Building Fabric Authenticity	Low.

Architectural Style 2 Specific	
Archaeology	
Physical Description	

This is a two storey building: originally a residential dwelling combination roof with two street facing gables. Original verandah has been replaced with a heavy rendered structure with pairs of columns at first floor level. The original structure was probably timber.
Half timber effect with rough cast render in gables with ornament. Tall brick corbelled chimneys with rough cast rendered heads. Street facade displays original tuck pointing in brickwork. Rough cast also applied at frieze level as a strip too under side of eaves. Brick arches are a feature of this window and especially at the entry. Stained lead light glass on west face and gables facing west identical to north facing gables. Most windows are timber double hung sashes.
Additions include brick paving to front for vehicles.

HISTORY

West Perth developed as suburban residential area in the late 1890s. From its inception it had the characteristics of a quality neighbourhood. Proximity to the city centre and Kings Park (then known as Perth Park), and the elevated location provided healthy site drainage as well as cooling breezes and views over the city and hills. The area had social status already associated with addresses in nearby Mount Street and access to the city's piped water system. The area was subdivided into large residential lots for development and proceed accordingly. The homes built in West Perth from the early 1900s included prestigious mansions built in prominent locations and smaller working-class cottages in the narrower back streets and towards the northern end of the area adjacent to the railway.
It is difficult to determine the date of construction without deeper research (at least a rates book search), because there was no numbering system until 1903, and when new houses were built in the street, the numbering was adjusted. It is likely the two-storey house was originally No. 17, built in 1902 or before. In 1908

numbering changed to No. 13, and the house was occupied by Mrs Ellenor Kekwick. The following year No. 15 is added to the directory, so either the house was split into two, or one side was finished before the other.
By 1915 Ellenor Kekwick was operating No. 13-15 Ord Street as a lodging house. This was common of larger houses in this area, in which proprietors would take advantage of the size and location, and as a response to the demand for housing after World War I.
The house operated as a lodging house into the 1930s. It was run by Mrs H. W. Simes in 1925, and by 1935, the place is listed as four separate residences: likely two downstairs and two upstairs. Mrs Simes lived in one. By 1940 it seems the place was back to being one residence, occupied by Mrs Grace Sarell. In 1949, when post office directories ceased publication the occupant was Mrs M. J. Pearce. The Metropolitan Water Supply Survey plan (1956) shows an identical mirrored pair, with a porch side entry on the west side (to access the upstairs; likely added to the house in the 1930s when it accommodated four flats). A photo held at the State Library of WA dated 1988 shows the house was used by ACB Shorter, advertising agency. The front of the house was bituminised for angle parking and there used to be a solid, painted rendered balustrade to the ground floor verandah, with no central opening. Photos in 1994 show this had been modified to allow access to central doors. A later photo (2000) shows this has been removed and the building is referred to as 'Swanline House.' Swanline Group relocated and since November 2019 the building has been occupied by Zenith Australia Group.
In 2022 the place is a two storey building with a hipped and gabled roof, with the two street facing gables a reminder of the fact it was once two semi-detached houses. The original verandah has been replaced with a heavy rendered structure with pairs of columns at first floor level. The original structure was probably timber. The gables have a half timber effect with rough cast render. The street facade displays original tuck pointing in brickwork. There are brick arches over the ground floor windows and stained lead light glass. The gables facing west are identical to the north facing gables. Most windows are timber double hung sashes. The garden has been replaced with paving to accommodate car parking.

STATEMENT OF SIGNIFICANCE

The place has aesthetic significance as a grand Federation Queen Anne residence from 1902.
It has historic significance for reflecting the way of life of a wealthier class of people who lived in this location in the late nineteenth and early twentieth century.
The place represents the change and evolution of residential living in West Perth, where many individual houses dating from the Federation gold boom era were replaced or converted into flats or apartments in the Inter-War period.
It is as a representative example of a residential property in West Perth that has undergone a change of use to commercial/professional offices with the changing character and growth of the City.

NATURE OF SIGNIFICANCE

HERCON Value A - Its importance in demonstrating the evolution or pattern of Perth's history

HISTORY

West Perth developed as suburban residential area in the late 1890s. From its inception it had the characteristics of a quality neighbourhood. Proximity to the city centre and Kings Park (then known as Perth Park), and the elevated location provided healthy site drainage as well as cooling breezes and views over the city and hills. The area had social status already associated with addresses in nearby Mount Street and access to the city's piped water system. The area was subdivided into large residential lots for development and proceed accordingly. The homes built in West Perth from the early 1900s included prestigious mansions built in prominent locations and smaller working class cottages in the narrower back streets and towards the northern end of the area adjacent to the railway.
Post Office directories show that the house was first listed in 1899 and was allocated street No. 19 in 1903 which changed to No. 17 in 1908. The house was first occupied by Hugh Plaistowe (Silver Plan Confectionary Co), and commensurate with this wealth, it is a very grand house. Hugh Plaistowe was born in London where he worked in his father’s confectionery business. In 1890 the Silverpan Confectionary Co. was established in Marquis Street, West Perth (this street is no longer extant). Plaistowe joined the company in 1895. In 1904 the name was changed to Plaistowe and Co, as a partnership between Plaistowe and Mr J. Hobbs. The company went on the great success in new premises from 1915 which are still extant in Havelock, Railway and Sutherland Streets, West Perth.

By 1920, the house was being run as a boarding house by Mrs L. McGrath. This was common of larger houses in this area, in which proprietors would take advantage of the size and location, and as a response to the demand for housing after World War I. In 1949, when post office directories ceased publication, the occupant was Mrs H. Stovold.
Aerial photos show that by 1965 there is an infill at the back of the house (both stories) which effectively makes the footprint of the building a large rectangle that takes up much of the lot.
The house would have had timber verandahs to both floors. A photo held at the State Library of WA dated 1994 when it was used for the Young Women's Christian Association of Perth Inc and YWCA of Western Australia shows that there was as separate skillion roof verandah at upper floor level, that had been brick infilled and had timber sash windows and a large, fixed horizontal panes at upper level, and at ground level the east side was the same, and the west wide had a pair of glazed doors. The ground floor windows had a shallow flat concrete awning over, that looked to date from the c. 1950s. The roof has the smaller gable over the original projecting bay, and a larger hip and gable behind. The chimneys were face brick with rendered bands and corbels.
This differs from the 1956 Metropolitan Water Supply Survey plan which shows that the house originally had a projecting bay to the east side, and a full length verandah to the street. The plan shows the projecting chimney on the west side (extant) and that the house was considerable in depth, had a cellar, and a large L-shaped verandah at the rear as well as another brick section (likely to be two storeys, as there was an external staircase). A photo held at the State Library of WA dated 1994 shows the façade has been altered to have a large timber filled gable, four arched windows on each floor, and small side double storey verandahs. The angle of the projecting bay is evident on the east side of the building, and it seems that the new façade has been designed to give the building an ‘Academic Classical’ style. It was most likely a Federation Queen Anne style house when built. The four tall chimneys are extant.
A real estate advertisement in 2015 for leasing some office space shows that this part has very little original features internally, but it is not certain which part of the building this now is. At 2022 the building is ‘Linq House’ and used for commercial/professional offices.

HISTORY

West Perth developed as suburban residential area in the late 1890s. From its inception it had the characteristics of a quality neighbourhood. Proximity to the city centre and Kings Park (then known as Perth Park), and the elevated location provided healthy site drainage as well as cooling breezes and views over the city and hills. The area had social status already associated with addresses in nearby Mount Street and access to the city's piped water system. The area was subdivided into large residential lots for development and proceed accordingly. The homes built in West Perth from the early 1900s included prestigious mansions built in prominent locations and smaller working-class cottages in the narrower back streets and towards the northern end of the area adjacent to the railway.
It is difficult to determine the date of construction without deeper research (at least a rates book search), because there was no numbering system until 1903, and when new houses were built in the street, the numbering was adjusted. It is likely the two-storey house was built around 1899 and run as a kindergarten by Miss A. C. Walton. In 1908 numbering changed to No. 19, and the house was occupied by Miss E. J. Scott, and run as a private school. In 1910 it was the Sisters of the Church Girls' School, and in 1911 it was a kindergarten operated by Miss Daisy Dalziell. From c. 1915 the occupant was Miss H. A. Evans and from c. 1935 there was

Miss Evans and two other people, suggesting she may have divided the house up into apartments. In 1949, when post office directories ceased publication the occupant was Mrs Elsie Hall.
The Metropolitan Water Supply Survey plan (1956) shows No. 19 as a brick two storey house with a front verandah that returns on the west side. The east side and rear also had a verandah and there were external stairs on the east side heading towards the street.
A photo held at the State Library of WA dated 1991 shows the building was occupied by Sattler Associates, Lister Gallery. It had a modified brick wall at the front to hide a staircase to the upper floor front verandah, which had a flat roof. A 1994 photo shows this modification from a different angle. The upper verandah had metal verandah posts and an iron balustrade with tiling to verandah floors. The bricks were painted cream. In 2000 the then owner provided information to the City of Perth that the front stairs modification had happened in the 1960s or '70s. The new entry door with side windows and awning are evident in the 1991 photo. Aerial photos show that between 1995 and 2000 the building was reroofed. A real estate advertisement in November 2021 for leasing the upper floor of the building as office space shows interior photos. They show that there are original fireplace surrounds, skirting and architraves in some rooms.
In 2022 the building is two storey painted brick with pitched roof with tall brick chimneys and terracotta pots. The c. 1960s additions have been reversed and the verandah roof is simple in detail. There is a simple awning over the entry.

HISTORY

West Perth developed as suburban residential area in the late 1890s. From its inception it had the characteristics of a quality neighbourhood. Proximity to the city centre and Kings Park (then known as Perth Park), and the elevated location provided healthy site drainage as well as cooling breezes and views over the city and hills. The area had social status already associated with addresses in nearby Mount Street and access to the city's piped water system. The area was subdivided into large residential lots for development and proceed accordingly. The homes built in West Perth from the early 1900s included prestigious mansions built in prominent locations and smaller working class cottages in the narrower back streets and towards the northern end of the area adjacent to the railway.
It is difficult to determine the date of construction without deeper research (at least a rates book search), because there was no numbering system until 1903, and when new houses were built in the street, the numbering was adjusted. It is likely the two storey house was built around 1907 and allocated No. 29 which changed to No. 21 in 1908. The house was first occupied by W. H. J. Lewis. In 1949, when post office directories ceased publication the occupant was Reginald Crommelin who had lived there since the early 1930s.The Metropolitan Water Supply Survey plan (1956) shows that this was a smaller house in area than the

surrounding ones. It had a full length front verandah and a weatherboard section at the back. Unlike others in the street it is only single storey.
A photo held at the State Library of WA dated 1991 shows the house in a very poor state, with deteriorated gable and gutters, a high brick wall semi-enclosing the verandah, and steel verandah posts. The roof was short sheet corrugated iron, but rusted. Since then the roof has been replaced, gable decoration restored, timber verandah posts reinstated, and the front wall removed. Aerial photos show that between 1985 and 1995, and again in 2003, the house was extended at the rear.
A real estate advertisement in May 2020 for leasing the house as offices shows interior photos. There are original features remaining such as fire places and surrounds, timber flooring, skirting and architraves, sash windows, plaster moulded archways and high ceilings. A floor plan shows that the passage wall on one side has been removed to create open plan office space, and a new entry door has been added on the east side. A small neo-classical motif in the front facade appears like a small bird bath fountain built into a niche in the wall. Tuck pointing is still evident in the original brickwork, which is painted.
At 2022 the place is used as medical consulting rooms.

HISTORY

West Perth developed as suburban residential area in the late 1890s. From its inception it had the characteristics of a quality neighbourhood. Proximity to the city centre and Kings Park (then known as Perth Park), and the elevated location provided healthy site drainage as well as cooling breezes and views over the city and hills. The area had social status already associated with addresses in nearby Mount Street and access to the city's piped water system. The area was subdivided into large residential lots for development and proceed accordingly. The homes built in West Perth from the early 1900s included prestigious mansions built in prominent locations and smaller working class cottages in the narrower back streets and towards the northern end of the area adjacent to the railway.
Post Office directories show that the house was first listed in 1905 and allocated street No. 39 which changed to No. 27 in 1908. The house was first occupied by Basil L. Murray of the Victoria Insurance Co. Occupancy changed often. In 1949, when post office directories ceased publication the house was occupied by James D. Clarkson.
The Metropolitan Water Supply Survey plan (1956) shows that the house was originally much narrower, with considerable space on the east side. It has a projecting bay on the east and a full length front verandah that wrapped around the bay. Two photos held at the State Library of WA dated 1996 show the house was by then Zegna 101 restaurant, and the space at the side was used for alfresco dining. The bull nose verandah with a timber frieze and turned timber posts were evident, over the tall timber framed sash windows. Aerial photos show the building was enlarged in the early 2000s to extend to the eastern boundary. At 2022 the former house

is a restaurant 'Black Toms.' The roof form and two tall chimneys of the house remain but the frontage has been heavily modified and there is a raised alfresco dining area that extends to the footpath with a modern high roofed addition on the east side.

STATEMENT OF SIGNIFICANCE

The place has historical significance as a Federation Queen Anne style dating from 1907.
The place is a representative example of a residential property in West Perth that has undergone a change of use with the changing character and growth of the City.
The building has little aesthetic significance but contributes to the streetscape in scale and materiality.

NATURE OF SIGNIFICANCE

HERCON Value A - Its importance in demonstrating the evolution or pattern of Perth's history

The place has historical significance as a Federation Queen Anne style dating from 1907.

HERCON Value B - Its importance in demonstrating rare, uncommon or endangered aspects of Perth's heritage

HERCON Value C - Its potential to yield information that will contribute to an understanding of Perth's history

HERCON Value D - Its importance in demonstrating the characteristics of a broader class of places

The place is a representative example of a residential property in West Perth that has undergone a change of use with the changing character and growth of the City.

HERCON Value E - Any strong or special meaning it may have for any group or community because of social, cultural or spiritual associations

HERCON Value F - Its importance in exhibiting particular aesthetic characteristics valued by any group or community

The building has little aesthetic significance but contributes to the streetscape in scale and materiality.

HERCON Value G - Any special association it may have with the life or work of a person, group or organization of importance in Perth's history

HERCON Value H - Its importance in demonstrating a high degree of creative or technical achievement

HERCON Value I - Any HERCON Value I - Any other characteristic it may have that in the opinion of the decision making body is relevant

CONDITION AND AUTHENTICITY

Condition	Fair to Good
Building Fabric Authenticity	Low

CLASSIFICATION OF SIGNIFICANCE

Little – Category 4 - Has elements or values worth noting for community interest but otherwise makes little contribution.

HISTORY

West Perth developed as suburban residential area in the late 1890s. From its inception it had the characteristics of a quality neighbourhood. Proximity to the city centre and Kings Park (then known as Perth Park), and the elevated location provided healthy site drainage as well as cooling breezes and views over the city and hills. The area had social status already associated with addresses in nearby Mount Street and access to the city's piped water system. The area was subdivided into large residential lots for development and proceed accordingly. The homes built in West Perth from the early 1900s included prestigious mansions built in prominent locations and smaller working-class cottages in the narrower back streets and towards the northern end of the area adjacent to the railway.
It is difficult to determine the date of construction without deeper research (at least a rates book search), because there was no numbering system until 1903, and when new houses were built in the street, the numbering was adjusted. It is likely the house was built around 1900 and later allocated street No. 43 which

changed to No. 31 in 1908. In 1949, when post office directories ceased publication the occupant was Mrs Hazel Stewart.
The Metropolitan Water Supply Survey plan (1956) shows that No. 31 originally has a verandah that wrapped around the western projecting bay of the house and all the way around the east side to another projecting bay (chimney well). There were central steps from the verandah to the street.
Aerial photos show that in the 1970s the rear of the house was changed and a full length roof was added for a carport. A real estate advertisement in December 2020 for leasing the house as offices shows interior photos. It retains original features such as timber architraves, skirtings, window frames and flooring, moulded archways, and high ceilings.
At 2022 the place is leased for offices. The building has lost its front verandah that wrapped around the bay window and the balustrade on the remaining verandah is modified, but otherwise is intact.

HISTORY

Demolished 2020. West Perth developed as suburban residential area in the late 1890s. From its inception it had the characteristics of a quality neighbourhood. Proximity to the city centre and Kings Park (then known as Perth Park), and the elevated location provided healthy site drainage as well as cooling breezes and views over the city and hills. The area had social status already associated with addresses in nearby Mount Street and access to the city's piped water system. The area was subdivided into large residential lots for development and proceed accordingly. The homes built in West Perth from the early 1900s included prestigious mansions built in prominent locations and smaller working-class cottages in the narrower back streets and towards the northern end of the area adjacent to the railway.
Post Office directories show that the house was first listed in 1898 and allocated street No. 48 which changed to No. 34 in 1908. The house was first occupied by Mrs Kezia Rodda. The next main occupant was Miss L. M. Rodda, who remained in the house until c. 1916.In 1949, when post office directories ceased publication the house was occupied by William Padbury.
The Metropolitan Water Supply Survey plan (1954) shows that the house had twin projecting bay windows to the front. A photo held at the State Library of WA dated 1991 shows the house when it was occupied by BCC

Training. It was a Federation Queen Anne style, single storey rendered brick house. It had a hipped corrugated iron roof with tall, corbelled chimneys. The facade was symmetrical with a central half-timbered gable and faceted bays to either side of the entry door. The verandah was under the main roof with timber posts and a decorative timber frieze. There were timber sash windows and the entry door had lead light.
In 2019 No. 34 together with the adjacent No. 32 were offered for sale as a package. They were both demolished in late 2020 and a new development begun: an office with rooftop apartment designed by architects Cameron Chisholm Nicol called 'Rhodes House' for mining company DFD Rhodes.

HISTORY

Demolished 2000. A Federation Bungalow was built at 45 Ord Street in 1904. It was a single storey brick building with limestone base. It had a hipped, corrugated iron roof with tall corbelled chimneys with terracotta pots; a prominent flying gable to street front and gable to entry with weatherboard infill; verandah under main roof with timber posts and latticed balustrade; original windows and French doors with leadlight features. The State Library of Western Australia holds photos dated 1994 naming the house 'Clifford House'. The place was demolished in the late 1990s/2000.

HISTORY

West Perth developed as suburban residential area in the late 1890s. From its inception it had the characteristics of a quality neighbourhood. Proximity to the city centre and Kings Park (then known as Perth Park), and the elevated location provided healthy site drainage as well as cooling breezes and views over the city and hills. The area had social status already associated with addresses in nearby Mount Street and access to the city's piped water system. The area was subdivided into large residential lots for development and proceed accordingly. The homes built in West Perth from the early 1900s included prestigious mansions built in prominent locations and smaller working-class cottages in the narrower back streets and towards the northern end of the area adjacent to the railway.
Post Office directories show that the house was first listed in 1905 and allocated street No. 100 which changed to No. 50 in 1908. The house was first occupied by Richard Morgan who was still there in 1920. The next occupant was Cecil Pead, who was still there in 1949, when post office directories ceased publication.
The Metropolitan Water Supply Survey plan (1954) shows the house as having a front facing and east facing projecting bay window, and a verandah returned around the east side. There was a cellar at the back of the house. A driveway on the east side lead to a brick garage about halfway towards the rear of the lot. Aerial

photos show that between 1985 and 1995 the house was substantially extended and remodelled at the back, and from the street this can be seen as a two-storey brick addition.
At 2022 the former single storey residence is readable, although it has lost some detailing including the timber verandah floor, and the brickwork has been painted. The corrugated iron roofed verandah is supported by ornate timber posts with scalloped timber fretwork. The street facing flying gable is supported by timber brackets with fretwork and a typical bay window. The gables display a half-timber effect with rough cast render. There are tall brick corbelled chimneys with terra-cotta pots. Windows are timber double hung sashes.
In 2022 the place is used for medical consulting rooms and professional offices.

Archaeology	
Physical Description	

This is a single level building originally a residential dwelling. The bullnose iron verandah is supported by ornate timber posts with timber fretwork and brackets. The corbelled - brick chimney retain their terracotta pots and stucco render to the heads. It has a combination hipped and gable roof. The half-timber effect in the gable has rough caste render and roof ventilation built into gable face. Additions include modern paver in local stone.

Walls 1 Material	Brick - Face

HISTORY

The building was constructed in 1905 for Frank Allum who was the Chief Clerk and Accountant at the Perth Mint. He worked for the Royal Mint (London) and travelled to WA to help set up the Perth Mint. He held other roles at the Mint until his retirement in 1928. In 1910 Robert H and Agnes Robertson, and their children lived in the house. After Robert's death in 1912 Agnes moved to another property. Agnes was a teacher and was the Vice President of the WA Teachers' Union in 1941.She was the second female Senator for WA in 1949.After the Robertson family left the property it was occupied by various people until the 1950s. More recently it has been used as office space.
West Perth developed as suburban residential area in the late 1890's. From its inception it had the characteristics of a quality neighbourhood. Proximity to the city centre and Kings Park (then known as Perth Park), and the elevated location which provided healthy site drainage as well as cooling breezes and views over the city and hills. The area had social status already associated with addresses in nearby Mount Street and access to the city's piped water system. The area was subdivided into large residential lots for development and proceed accordingly.

4. Building Perth (Settlements & Cities) - 4.1.5 Developing city centres
8. Developing Perth's Cultural Life - 8.10.4 Designing & building fine buildings
8. Developing Perth's Cultural Life - 8.13 Living in cities and suburbs

STATEMENT OF SIGNIFICANCE

The place is significant for its associations with Frank Ernest Allum (who commissioned its construction, and who was its first resident), Chief Clerk and Accountant at the Royal Mint (Perth) from his arrival in Western Australia in 1898, the Superintendent of the Mint from 1919, and, Deputy Master from 1925 until his retirement in 1928. Allum was also a well-known and significant figure in Perth's literary, scientific and artistic circles.
The place is significant for its associations with Robert and Agnes Robertson, who lived at the place between 1910 and 1912.
Robert H. Robertson, a journalist, was at the time of his appointment (at 29), the youngest editor of a major newspaper ever appointed in Western Australia.
Agnes Robertson was a primary school teacher for almost thirty years, and was part of the executive of the W.A. Teachers' Union; the first Western Australian woman lay preacher in the Presbyterian Church; held high office in the Liberal and Country League of Western Australia: was elected (in 1949) as the first Liberal and Country League Senator, and the second woman Senator for Western Australia; was the first woman Senator for the Country Party (1955); and was a strong advocate for the protection of Australia's built heritage.
The place has rarity value in the City of Perth, as one of a diminishing number of intact Federation-era former residences, which has been retained on its original lot.
The place has aesthetic value as a fine example of a single-storey residence designed in the Federation Bungalow style, characterised by its a picturesque form, dominant hipped and gable roof forms, tall masonry chimneys, and deep shady verandahs.
The place is important in contributing to the streetscape of Ord Street, and forms part of an intact group of former residences of similar age, quality and style, including No. 50, immediately adjacent to the east, the Celtic Club at No.48, and No. 51, on the opposite corner.
The place is significant in reflecting the way of life of middle class and professional families living in West Perth in the first half of the twentieth century.

NATURE OF SIGNIFICANCE

HERCON Value A - Its importance in demonstrating the evolution or pattern of Perth's history

The place is significant in reflecting the way of life of middle class and professional families living in West Perth in the first half of the twentieth century.

HERCON Value B - Its importance in demonstrating rare, uncommon or endangered aspects of Perth's heritage

The place has rarity value in the City of Perth, as one of a diminishing number of intact Federation-era former residences, which has been retained on its original lot.

HERCON Value C - Its potential to yield information that will contribute to an understanding of Perth's history

HERCON Value D - Its importance in demonstrating the characteristics of a broader class of places

HERCON Value E - Any strong or special meaning it may have for any group or community because of social, cultural or spiritual associations

HERCON Value F - Its importance in exhibiting particular aesthetic characteristics valued by any group or community

The place has aesthetic value as a fine example of a single-storey residence designed in the Federation Bungalow style, characterised by its a picturesque form, dominant hipped and gable roof forms, tall masonry chimneys, and deep shady verandahs.
The place is important in contributing to the streetscape of Ord Street, and forms part of an intact group of former residences of similar age, quality and style, including No. 50, immediately adjacent to the east, the Celtic Club at No.48, and No. 51, on the opposite corner.

HERCON Value G - Any special association it may have with the life or work of a person, group or organization of importance in Perth's history

The place is significant for its associations with Frank Ernest Allum (who commissioned its construction, and who was its first resident), Chief Clerk and Accountant at the Royal Mint (Perth) from his arrival in Western Australia in 1898, the Superintendent of the Mint from 1919, and, Deputy Master from 1925 until his retirement in 1928. Allum was also a well-known and significant figure in Perth's literary, scientific and artistic circles.
The place is significant for its associations with Robert and Agnes Robertson, who lived at the place between 1910 and 1912. Robert H. Robertson, a journalist, was at the time of his appointment (at 29), the youngest editor of a major newspaper ever appointed in Western Australia. Agnes Robertson was a primary school teacher for almost thirty years, and was part of the executive of the W.A. PHYSICAL DESCRIPTION

Architectural Style 1 General	Federation (c.1890-c.1915)
Architectural Style 1 Specific	Queen Anne
Architectural Style 2 General	
Architectural Style 2 Specific	
Archaeology	
Physical Description	

Single storey brick building, originally residential. Complex corrugated iron roof with tall decorative chimneys with terracotta pots. Moulded brackets to eaves.
Prominent flying gable with half-timbered effect and pebbledash facing the street. Return verandah with bullnose roof with decorative timber posts and balustrade. Double hung sash windows are original.
External walls were originally tuck pointed brick, now painted. Verandah has concrete slab which is not original and posts and balustrade are also not original. There is a recent extension to the rear of the house in a contemporary style. Side windows have been replaced with louvers.
The interior shows evidence of alterations to commercial use which have now been partly reversed for the current residential use. The wall to the front room has been removed to create a former foyer. There is extensive evidence of restoration with new materials. There are some original skirtings, ceilings, ceiling roses, architraves etc and some recent introduced elements. The original plan is generally intact.
Part of a small group of Federation period homes at the western end of Ord Street.

HISTORY

Demolished 2005. There were two separate houses at No. 54 and No. 56 Ord Street dating from c. 1905. They were demolished for a new development.
In 1999, No. 54 was a single storey house with a rendered brick with ashlar effect. The roof had half hipped and tiled with tall chimneys with terracotta pots. It had a prominent flying gable with half-timbered effect and pebbledash facing the street. The verandah under a corrugated iron bull nose roof had decorative timber posts and frieze. There were timber sash windows and original timber doors.

HISTORY

West Perth developed as suburban residential area in the late 1890s. From its inception it had the characteristics of a quality neighbourhood. Proximity to the city centre and Kings Park (then known as Perth Park), and the elevated location provided healthy site drainage as well as cooling breezes and views over the city and hills. The area had social status already associated with addresses in nearby Mount Street and access to the city's piped water system. The area was subdivided into large residential lots for development and proceed accordingly. The homes built in West Perth from the early 1900s included prestigious mansions built in prominent locations and smaller working class cottages in the narrower back streets and towards the northern end of the area adjacent to the railway.
Post Office directories show that the house was first listed in 1912 and was first occupied by Michael G. Lavan, of Smith & Lavan. In 1949, when post office directories ceased publication the house was still occupied by the Lavan family.
The Metropolitan Water Supply Survey plan (1954) shows the house with a driveway on the west side parallel to the right of way. There is a return verandah, central steps and a projecting bay on the east side.

Aerial photos show that between 1995 and 2000 the house was reroofed from red (tiles?) to steel and was also added to at the rear. The view from the side lane shows this as a two storey brick addition. It has been built to appear original with matching window arch heads and stucco sills.
A real estate advertisement in December 2018 for leasing the former house as offices has interior photos. It is difficult to say what is original fabric and what is recycled material or refabricated to match original in such features as ceiling roses, cornices, moulded archways and so on.
In 2022 the single storey section is rendered in a limestone colour with ashlar effect. There is a prominent flying gable with half-timbered effect and pebbledash that faces the street. The verandah is under a corrugated iron bull nose roof with decorative timber posts and frieze, with a tiled floor. The former house is used for offices.

WESTERN AUSTRALIAN HISTORIC THEME

1. Demographic settlement and mobility - 104 Land allocation and subdivision
3. Occupations - 306 Domestic activities
3. Occupations - 308 Commercial activities

8. Developing Australia's Cultural Life - 8.10.4 Designing & building fine buildings
8. Developing Perth (Australia's) Cultural Life - 8.12 Living in and around Australian homes

STATEMENT OF SIGNIFICANCE

The place has historic and aesthetic significance as a Federation Bungalow built in 1912.
As a relatively intact former house it is a reminder of the residential character of West Perth and represents the way of life of wealthier residents in the late nineteenth and early twentieth century.
The place is a representative example of a residential property that has undergone a change of use to professional offices with the changing character and growth of the City.
The former house makes a positive contribution to the visual qualities of the streetscape, although the two storey additions are intrusive.

NATURE OF SIGNIFICANCE

HERCON Value A - Its importance in demonstrating the evolution or pattern of Perth's history

HISTORY

West Perth developed as suburban residential area in the late 1890s. From its inception it had the characteristics of a quality neighbourhood. Proximity to the city centre and Kings Park (then known as Perth Park), and the elevated location provided healthy site drainage as well as cooling breezes and views over the city and hills. The area had social status already associated with addresses in nearby Mount Street and access to the city's piped water system. The area was subdivided into large residential lots for development and proceed accordingly. The homes built in West Perth from the early 1900s included prestigious mansions built in prominent locations and smaller working class cottages in the narrower back streets and towards the northern end of the area adjacent to the railway.
Outram Street had several houses on it by 1900, more on the east side than the west, but numbering was not allocated, making it difficult to trace dates of construction. Post Office directories show that a Mrs A. E. Allpike was living on the street in 1902 in a house which was later allocated No. 10. Numbering changed to No. 6 in 1908. The Metropolitan Water Supply Survey plan (1953) shows the house as an unconventional shape, with a wraparound verandah at the front and rear, and weatherboard outbuildings along the back lane.
A second storey was added by 1983, as per a State Library of WA photo (312096PD). At 2022 the place is used for office space and is undergoing a refurbishment (internally). The second storey detracts from the street view, as there is a dormer window facing the street, and the original roof has been modified, being higher and out of scale.

Walls 2 Material	
Roof Material	Tile - Terracotta
Architect	Powell, Cameron and Chisholm
Builder	T. Snook and Son
Other Associations	Louis Seeligson

HISTORY

West Perth developed as suburban residential area in the late 1890s. From its inception it had the characteristics of a quality neighbourhood. Proximity to the city centre and Kings Park (then known as Perth Park), and the elevated location provided healthy site drainage as well as cooling breezes and views over the city and hills. The area had social status already associated with addresses in nearby Mount Street and access to the city's piped water system. The area was subdivided into large residential lots for development and proceed accordingly. The homes built in West Perth from the early 1900s included prestigious mansions built in prominent locations and smaller working class cottages in the narrower back streets and towards the northern end of the area adjacent to the railway.
Outram Street had several houses on it by 1900, more on the east side than the west, but numbering was not allocated, making it difficult to trace dates of construction. Post Office directories show that E. J. Bickford was living on the street in 1903, in a house which was later allocated No. 12; then No. 16. Numbering changed to No. 14 in 1908.Louis and Lily Seeligson lived at this house from 1905. The Seeligons, who previously lived at No. 1 Richardson Street, were one of the earliest Jewish families in Perth. The name Seeligson is still closely associated with the Western Australian Jewish Community which benefits from their initiative and generosity. Phineas Seeligson, elder brother of Louis, bequeathed the greater part of his Estate to the Trusteeship of the Perth Hebrew Congregation for the purpose of helping to meet the spiritual, educational and philanthropic needs of the Jewish Community. Louis Seeligson was still the main occupant in the early 1930s, by this time a well-

known financier. In 1932, the newspaper reported that Seeligson was redeveloping his property into 'Eulla Flats'. The building contract tender was won by T. Snook and Sons, and the architect was Powell, Cameron and Chisholm. The West Australian describes the development in detail:"Seeligson's Ltd., has accepted the tender of Messrs. T. Snooks and Son, amounting to £3,059 for extensive alterations and additions to a residence in Outram Street, West Perth, which will be converted into four modern self-contained flats, from plans prepared by Messrs. Powell, Cameron and Chisholm, architects, of Perth. Each flat will consist of a lounge, dining-room, two bedrooms, bathroom and kitchenette. Modern designed open fire places with book cupboards on each side, and set in inglenooks, will be built in each lounge, and the walls will have a texture finish up to the china shelf which surrounds the room. The windows and doors will be glazed with leadlight. The bathrooms will have terrazzo floors, tiled walls, pedestal basins with sunken baths, gas bath heaters and shower recess with glass doors. A built-in shaving cabinet between two windows will complete the appointments. The kitchenettes will be equipped with gas stoves, sinks, with leadlight glazed china cupboards above and pot cupboards underneath, larder cupboards, folding tables and ironing boards. There will be a tiled dado to the walls, and the floors will be in terrazzo. Garbage shoots will be installed to the upstairs flats. Cloak, linen, broom and wardrobe cupboards will also be built in wherever convenient. The ceilings throughout will be ornamental plaster sheet. Special attention has been paid to the electric lighting, and power plugs for each room. Externally the building will be modernised by removing the existing hedge and fence which is to be replaced by a dwarf wall and demolishing the existing wooden front verandah and balcony and replacing it with brick piers and balustrade. Concrete stairs will give access to the first floor flats, and back stairs have also been provided for." (9 November 1932, p. 10) Seeligson occupied one of the four flats. He died there in 1942. The State Library of Western Australia holds a photo dated 1983 (312097PD) showing the place as Bagwell's Restaurant. A real estate advertisement from October 2020 shows the interior. The place is remarkably intact with leadlight windows and fitted cabinetry in the living and kitchen areas, timberwork and elaborate ceilings and fireplaces. At 2022 the place is leased as offices.

WESTERN AUSTRALIAN HISTORIC THEME

STATEMENT OF SIGNIFICANCE

The place has aesthetic significance as an Inter-War Functionalist style block of flats.
Built in 1932, Eulla Flats is associated with the architects Powell, Cameron and Chisholm, whose architects together have made a significant contribution to architecture in the State.
The flats represent the change and evolution of residential living in West Perth, where many individual houses dating from the Federation gold boom era were replaced or converted into flats in the Inter-War period.
The place is a significant component of the Outram Street streetscape.

NATURE OF SIGNIFICANCE

HERCON Value A - Its importance in demonstrating the evolution or pattern of Perth's history

HISTORY

West Perth developed as suburban residential area in the late 1890s. From its inception it had the characteristics of a quality neighbourhood. Proximity to the city centre and Kings Park (then known as Perth Park), and the elevated location provided healthy site drainage as well as cooling breezes and views over the city and hills. The area had social status already associated with addresses in nearby Mount Street and access to the city's piped water system. The area was subdivided into large residential lots for development and proceed accordingly. The homes built in West Perth from the early 1900s included prestigious mansions built in prominent locations and smaller working class cottages in the narrower back streets and towards the northern end of the area adjacent to the railway.
Post Office directories show that No. 23 was built in 1908, with the first occupant listed as Robert E. Welchman in 1909. From c. 1915 there were often two occupants listed and sometimes the directory listed No. 23 and No. 23a, indicating the house was converted into two separate residences. (At 2022, there are two separate doors at the rear of the house, to support this.) The Metropolitan Water Supply Survey plan (1954) shows No. 23 addressing the corner of Ord Street, with a projecting bays to each street, and a corner verandah that extends around both sides. There were brick and weatherboard outbuildings along the rear lane, and the rear of the

house had a full-length verandah with steps down. Aerial photos show that the rear verandah detail was lost in the 1970s and a small flat carport added. At 2022 the rear of the house is bituminised for car parking, and the former house is used for the office of Major Holdings and its associated motor dealerships.

HISTORY

West Perth developed as suburban residential area in the late 1890s. From its inception it had the characteristics of a quality neighbourhood. Proximity to the city centre and Kings Park (then known as Perth Park), and the elevated location provided healthy site drainage as well as cooling breezes and views over the city and hills. The area had social status already associated with addresses in nearby Mount Street and access to the city's piped water system. The area was subdivided into large residential lots for development and proceed accordingly. The homes built in West Perth from the early 1900s included prestigious mansions built in prominent locations and smaller working class cottages in the narrower back streets and towards the northern end of the area adjacent to the railway.
Outram Street had several houses on it by 1900, more on the east side than the west, but numbering was not allocated, making it difficult to trace dates of construction. Post Office directories show that No. 26 was first listed in 1903 and first occupied by Alexander McIntosh. The Metropolitan Water Supply Survey plan (1954) shows No. 26 as attached to the adjacent No. 28. It has a masonry wall on the boundary of Outram Street and around the corner to Ord Street just to the beginning of the main house, then continuing at the back of the house to the brock garage. The garage is facing Ord Street and aligned along the rear lane boundary. The front of the house has a projecting bay and half-length front verandah.
The State Library of Western Australia holds a photo dated 1983 (312098PD) showing the house was being used as architects' offices. It had the original corrugated iron roof and a domestic front garden. Aerial photos

show a larger roof cover at the rear than originally built. The street view shows this as a two storey fibro and timber addition. The house was later converted to a café, and the front verandah was semi-enclosed by masonry archways. Outram Café closed in 2019. A real estate advertisement in 2022 shows internal photos and some original features remain such as moulded ceilings, fireplaces and surrounds, chair rails, architraves, timber windows and skirtings. However, the café fitout and kitchens has resulted in substantial modifications with some walls removed and new entries. At 2022 the former house is vacant and for lease.

Architectural Style 1 Specific	Queen Anne
Architectural Style 2 General	
Architectural Style 2 Specific	
Archaeology	
Physical Description	

Single storey brick and iron residence with recent addition to the rear. The walls are tuck-pointed Flemish bond with pebble-dash render to sill height. Hipped corrugated iron roof with half-timbered pebble dash rendered prominent flying gable. Front verandah concrete with steel posts (not original). There are three full length window openings to the front verandah, two have doors to the original window openings. There is an arched window with leadlights on the front elevation. Windows are double hung sash.
The front door is on the northern side with original leadlight sidelights. The entrance porch is original with timber floor, timber posts and framing. Chimneys have pebble dash render but no corbelling.
The internal layout, including 5 original rooms, is substantially intact with one non-original door opening and one area where the wall has been removed to create a reception area. Some original panelled doors remain extant. Some original and some replacement ceilings. There is one original fireplace surround with unusual metal insert and original tiles, in Arts and Crafts style.
The assessment does not include the recent extension at the rear which is not significant.
There are recent office developments on both sides of the building, however other heritage buildings are located on the eastern side of Outram Street.

Outram Street had several houses on it by 1900, more on the east side than the west, but numbering was not allocated, making it difficult to trace dates of construction. Post Office directories show that the house was first listed in 1905 and allocated a street number (No. 31) which changed to No. 27 in 1908. The house was first occupied by Bert Gutmann, of Watson and Gutmann. The Metropolitan Water Supply Survey plan (1954) shows a large house with a projecting bay to the street and another to the north. There was a driveway on the north side leading to a brick garage at the back. At 2022 the former house is used for offices. The back lane leads to a covered parking area in the former back yard of the house, and a brick skillion roofed addition.

HISTORY

West Perth developed as suburban residential area in the late 1890s. From its inception it had the characteristics of a quality neighbourhood. Proximity to the city centre and Kings Park (then known as Perth Park), and the elevated location provided healthy site drainage as well as cooling breezes and views over the city and hills. The area had social status already associated with addresses in nearby Mount Street and access to the city's piped water system. The area was subdivided into large residential lots for development and proceed accordingly. The homes built in West Perth from the early 1900s included prestigious mansions built in prominent locations and smaller working class cottages in the narrower back streets and towards the northern end of the area adjacent to the railway.
Outram Street had several houses on it by 1900, more on the east side than the west, but numbering was not allocated, making it difficult to trace dates of construction. Post Office directories show that a Charles S. R. Palmer C. E. (Church of England, possibly a pastor). By 1903 this house has been given No. 34. In 1934 the house was vacant and in 1935 there are three people listed in the same property: Dr. Samuel Nathaniel Michael, medical practitioner, Mrs M. G. Strickland, and Theo O. Taylor. This suggests that the property was built in 1934 as flats. Aerial photos show the dormer windows on the south side were there in 1948; therefore original. The Metropolitan Water Supply Survey plan (1954) shows No. 34 as a long house with entry paths leading from the street to each side, and two porches, as well as two rear stairs. The building appears to have been built as four flats; two upstairs and two downstairs. In 1949, when post office directories ceased publication, there were four individual residents at No. 34 Outram Street.

The State Library holds a photo dated 1983 showing the house as Kimble & Halliday Dental Surgeons. From the street the façade is a striking two-storey, Inter-War Old English style former flats. The tiled roof is complex with a number of flying gables with half-timbered effect. There are casement windows with diamond pattern leadlight, and an oriel window to the first floor. The side dormer windows are supported by timber brackets and have small gables over with the same timber decorative features as the front. At 2022 the property is three (?) different suites offering medical or dental services.

WESTERN AUSTRALIAN HISTORIC THEME

1. Demographic settlement and mobility - 104 Land allocation and subdivision
3. Occupations - 306 Domestic activities

AUSTRALIAN HISTORIC THEME

3. Developing Perth's (Local, Regional & National) Economies - 3.22 Lodging people
3. Developing Perth's (Local, Regional & National) Economies - 3.26 .1 Providing dental and medical services
4.Building Perth (Settlements & Cities) - 4.1.2 Making suburbs

8. Developing Australia's Cultural Life - 8.10.4 Designing & building fine buildings

STATEMENT OF SIGNIFICANCE

The place has aesthetic significance as an Inter-War Old English style block of flats.
Built in 1934, the flats represent the change and evolution of residential living in West Perth, where many individual houses dating from the Federation gold boom era were replaced or converted into flats in the Inter-War period.
The place is a significant component of the Outram Street streetscape.

NATURE OF SIGNIFICANCE

HERCON Value A - Its importance in demonstrating the evolution or pattern of Perth's history

Built in 1934, the flats represent the change and evolution of residential living in West Perth, where many individual houses dating from the Federation gold boom era were replaced or converted into flats in the Inter-War period.

HERCON Value B - Its importance in demonstrating rare, uncommon or endangered aspects of Perth's heritage

HERCON Value C - Its potential to yield information that will contribute to an understanding of Perth's history

HERCON Value D - Its importance in demonstrating the characteristics of a broader class of places

HERCON Value E - Any strong or special meaning it may have for any group or community because of social, cultural or spiritual associations

HERCON Value F - Its importance in exhibiting particular aesthetic characteristics valued by any group or community

The place has aesthetic significance as an Inter-War Old English style block of flats. The place is a significant component of the Outram Street streetscape.

HERCON Value G - Any special association it may have with the life or work of a person, group or organization of importance in Perth's history

HERCON Value H - Its importance in demonstrating a high degree of creative or technical achievement

HERCON Value I - Any HERCON Value I - Any other characteristic it may have that in the opinion of the decision making body is relevant

CONDITION AND AUTHENTICITY

Condition	Good
Building Fabric Authenticity	Largely as originally constructed with detail intact.

CLASSIFICATION OF SIGNIFICANCE

Considerable – Category 2 - Very important to the heritage of the locality.

Architectural Style 1 Specific	Queen Anne
Architectural Style 2 General	
Architectural Style 2 Specific	
Archaeology	
Physical Description	

Originally residential with single front. Originally two terraced cottages, converted to one for commercial purposes. The front elevation has lost all original window and door openings. Roof is hipped with front gables and chimneys with rendered corbelling. Bullnosed verandah, terracotta tiles, timber posts and frieze, to front porch. Low brick fence with piers and timber pickets to both buildings.
Originally two attached houses which have been converted to one. Two passages still evident, front rooms have walls removed to create an open reception area.
Forms part of a group of turn of the century houses. Houses on either side are substantially intact.

HISTORY

West Perth developed as suburban residential area in the late 1890s. From its inception it had the characteristics of a quality neighbourhood. Proximity to the city centre and Kings Park (then known as Perth Park), and the elevated location provided healthy site drainage as well as cooling breezes and views over the city and hills. The area had social status already associated with addresses in nearby Mount Street and access to the city's piped water system. The area was subdivided into large residential lots for development and proceed accordingly. The homes built in West Perth from the early 1900s included prestigious mansions built in prominent locations and smaller working class cottages in the narrower back streets and towards the northern end of the area adjacent to the railway.
Post Office directories show that the attached pair was first listed in 1905 and allocated street numbers (No. 38 and 38a) which changed to No. 38-40 in 1908. The houses were first occupied by John Coyle and George Withers.
The Metropolitan Water Supply Survey plan (1954) shows an identical attached pair with full length front verandahs and the same at the rear, with steps down to a small rear yard.

Aerial photos show that between 1985 and 1995 the roof was replaced and the rear structures (possibly carports/pergolas) were removed. A smaller shelter was added to the north side (No. 40) and the rear yard is a car park. The 1980s alterations and design work was carried out by architect Ian Molyneux (Source: Dr N. Radny). From the street it is clear the original entrance doors and the windows have been replaced with French doors. The bull nose verandah and posts remain with the verandah floor lost. At 2022 the former pair is No. 40, and under the same owner, and has been used for offices.

The area was subdivided into large residential lots for development and proceed accordingly. The homes built in West Perth from the early 1900s included prestigious mansions built in prominent locations and smaller working class cottages in the narrower back streets and towards the northern end of the area adjacent to the railway.
Post Office directories show that the house was first listed in 1903 and allocated a street number (No.40) which changed to No. 42 in 1908. The house was first occupied by Mrs L. A. Townsend. The Metropolitan Water Supply Survey plan (1954) shows the brick house on the corner of Richardson Street. It had grano paving leading to the front verandah, a large timber room at the rear of the main brick house, and an aviary in the back yard.
Aerial photos show that between 1985 and 1995 the roof was replaced. The Richardson Street elevation has been modified to create another entrance to the building, and the back lane access is open, with carparking

space, and another entrance into the timber skillion-roofed lean to. At 2022 the building is used for medical consulting rooms.

HISTORY

West Perth developed as suburban residential area in the late 1890s. From its inception it had the characteristics of a quality neighbourhood. Proximity to the city centre and Kings Park (then known as Perth Park), and the elevated location provided healthy site drainage as well as cooling breezes and views over the city and hills. The area had social status already associated with addresses in nearby Mount Street and access to the city's piped water system. The area was subdivided into large residential lots for development and proceed accordingly. The homes built in West Perth from the early 1900s included prestigious mansions built in prominent locations and smaller working-class cottages in the narrower back streets and towards the northern end of the area adjacent to the railway.
Post Office directories show that the house was first listed in 1903 and allocated a street number (No. 41) which changed to No. 43 in 1908. The house was first occupied by C. W. Greayer. From c.1920 to c. 1935 the occupant was William F. Lathlain, JP and Mayor of Perth from 1918-1923, and Lord Mayor 1930-1932. The Metropolitan Water Supply Survey plan dated 1954 shows a brick house with a verandah addressing the corner, with steps down to a path to the corner. There is also a verandah along Richardson Street. The house has two projecting bays; one to Richardson Street and one to Outram Street. The property has rear lane access with brick and weatherboard outbuildings along the lane. There is a bathroom under the main roof.
At 2022, the house is used as professional/medical offices. It has lost the Richardson Street verandah details and the former back yard is paved for carparking.

HISTORY

West Perth developed as suburban residential area in the late 1890s. From its inception it had the characteristics of a quality neighbourhood. Proximity to the city centre and Kings Park (then known as Perth Park), and the elevated location provided healthy site drainage as well as cooling breezes and views over the city and hills. The area had social status already associated with addresses in nearby Mount Street and access to the city's piped water system. The area was subdivided into large residential lots for development and proceed accordingly. The homes built in West Perth from the early 1900s included prestigious mansions built in prominent locations and smaller working class cottages in the narrower back streets and towards the northern end of the area adjacent to the railway.
Post Office directories show that the house was first listed in 1903 and allocated a street number (No. 42-42a) which changed to No. 44-46 in 1908. The house was first occupied by W. S. Dormer (1903) and Miss Waldow, piano teacher (1904). The Metropolitan Water Supply Survey plan (1954) shows an attached pair of houses on the corner of Richardson Street, facing Outram Street. They have mirrored verandahs that do not extend to the outer edge of the house. The back of the houses is the location for the kitchen, bathroom, laundry with copper, and brick WC on the back lane boundary.
Aerial photos show that between 1985 and 1995 the roof was replaced. The Richardson Street elevation has been modified to create more two entrances to the building, and the back lane access is open, with carparking

space. At 2022 the former attached pair is No. 44 and under the same ownership. It is used as the office of a state politician.

HISTORY

West Perth developed as suburban residential area in the late 1890s. From its inception it had the characteristics of a quality neighbourhood. Proximity to the city centre and Kings Park (then known as Perth Park), and the elevated location provided healthy site drainage as well as cooling breezes and views over the city and hills. The area had social status already associated with addresses in nearby Mount Street and access to the city's piped water system. The area was subdivided into large residential lots for development and proceed accordingly. The homes built in West Perth from the early 1900s included prestigious mansions built in prominent locations and smaller working class cottages in the narrower back streets and towards the northern end of the area adjacent to the railway.
Post Office directories show that the attached pair was first listed in 1904 and allocated street number Nos. 43 and 43a which changed to Nos. 45-47 in 1908. The first occupants were Albert Mills and William Porrit.
The Metropolitan Water Supply Survey plan (1954) shows the semi-detached mirrored pair with front and wraparound verandahs. They had timber rooms to the rear, and half verandahs, and various galvanised iron outbuildings in the back yards.
The State Library of Western Australia holds a photo dated 1983 (312100PD) that refers to the place as ‘Samantha House.’ Aerial photos show that in 2002 the original rear was modified with another hipped roof section, and in 2007 another hipped bay again, so that the building extends almost to the rear lane. The

attached pair is two storey, built in the Federation Queen Anne style. The hipped corrugated iron roof has tall chimneys and prominent flying gables with half-timbered effect and decorative stucco moulding. The return verandahs are under a bull nose roof with timber posts and decorative timber balustrade to the first floor. The ground floor has classical columns with a rendered balustrade to ground floor. There are original timber sash windows, and the entry doors have top and side lights. It is one of the more elaborate houses in Outram Street and stands out as a two-storey example of the era.
At 2022 there are external fire escape stairs at one side, and from the rear, the new addition is a second floor office space, with covered car parking bays underneath, accessed from the rear lane. The former attached residences are under the same ownership and used for offices.

HISTORY

West Perth developed as suburban residential area in the late 1890s. From its inception it had the characteristics of a quality neighbourhood. Proximity to the city centre and Kings Park (then known as Perth Park), and the elevated location provided healthy site drainage as well as cooling breezes and views over the city and hills. The area had social status already associated with addresses in nearby Mount Street and access to the city's piped water system. The area was subdivided into large residential lots for development and proceed accordingly. The homes built in West Perth from the early 1900s included prestigious mansions built in prominent locations and smaller working-class cottages in the narrower back streets and towards the northern end of the area adjacent to the railway.
The Post Office Directory lists the first resident of No. 49 Outram Street in 1904 as Charles Stawell. (It was then numbered 45), indicating 1903-04 as the date of construction. The house was occupied by various professionals, for example in 1910-11, Edward Welsted, Manager of Bewick Moreing & Co, and in 1915 Charles H. Wittenoom. In 1949 when directory publication ceased the occupant was Mrs T. M. Haynes. A medical Practitioner, Edward Haynes, had a practice adjacent at No. 53 from 1908-1916.The Metropolitan Water Supply Survey plan dated 1954 shows a brick house with a verandah addressing the corner, with central steps down to a path to Outram Street. The house has a projecting bay to Outram Street. The property had rear lane access with a large, galvanised iron outbuilding along the lane. The State Library of Western Australia holds a photo dated 1994 (314750PD) showing the house being renovated to become the Villa D'Este Restaurant. At 2022, the house is used as a restaurant ‘Zafferano.’

HISTORY

West Perth developed as suburban residential area in the late 1890s. From its inception it had the characteristics of a quality neighbourhood. Proximity to the city centre and Kings Park (then known as Perth Park), and the elevated location provided healthy site drainage as well as cooling breezes and views over the city and hills. The area had social status already associated with addresses in nearby Mount Street and access to the city's piped water system. The area was subdivided into large residential lots for development and proceed accordingly. The homes built in West Perth from the early 1900s included prestigious mansions built in prominent locations and smaller working class cottages in the narrower back streets and towards the northern end of the area adjacent to the railway.
Outram Street had several houses on it by 1900, more on the east side than the west, but numbering was not allocated, making it difficult to trace dates of construction. Post Office directories show that the house was first listed in 1903 and allocated a street number (No. 69) which changed to No. 73 in 1908. The house was first occupied by Charles Gallagher. The Metropolitan Water Supply Survey plan (1953) shows the house was brick with a wraparound verandah at the front, a projecting bay on the north side, and stairs at the back up to a covered verandah and weatherboard laundry.
Aerial photos show that the house was modified c. 1978. A real estate advertisement in 2019 shows the upper floor which is a late 1970s brick addition. From the street it is apparent that the original house on the ground floor is extant but the second floor addition makes it unrecognisable as such. There is a staircase and brick pillars at the front. At 2022 the building is used for office space, with three separate tenancies.

HISTORY

West Perth developed as suburban residential area in the late 1890s. From its inception it had the characteristics of a quality neighbourhood. Proximity to the city centre and Kings Park (then known as Perth Park), and the elevated location provided healthy site drainage as well as cooling breezes and views over the city and hills. The area had social status already associated with addresses in nearby Mount Street and access to the city's piped water system. The area was subdivided into large residential lots for development and proceed accordingly. The homes built in West Perth from the early 1900s included prestigious mansions built in prominent locations and smaller working class cottages in the narrower back streets and towards the northern end of the area adjacent to the railway.
Outram Street had several houses on it by 1900, more on the east side than the west, but numbering was not allocated, making it difficult to trace dates of construction. Post Office directories show that the house was first listed in 1903 and allocated street Nos. 80-80a which changed to No. 92-84 in 1908. The houses were first occupied by John H. Sedergreen and Mrs M. Hodge. The Metropolitan Water Supply Survey plan (1953) shows an attached pair with full length front verandahs, and small side verandahs at the rear, unusually located adjacent, rather than on the outer edge. A brick laundry and WC were located on the back lane boundary. Aerial photos show that between 1985 and 1995 the property was reroofed, and in 2001 a carport was built at the rear. It is accessed from Clive Street. From the street the building is still readable as a single storey, semi-

detached pair, and part of a row of three similar (96-98 and 100-102) adjacent. There is a firewall that divides the houses that continues through to the front verandah space. The roof is hipped corrugated iron roofs with tall decorative corbelled chimneys. There are prominent flying gables with half-timbered effect, pebbledash, timber finial and louvred ventilation panels. The verandah is under a separate roof with turned timber posts. The double hung sash windows are original.
At 2022, the property is No. 92, with both former houses under the same ownership.

HISTORY

West Perth developed as suburban residential area in the late 1890s. From its inception it had the characteristics of a quality neighbourhood. Proximity to the city centre and Kings Park (then known as Perth Park), and the elevated location provided healthy site drainage as well as cooling breezes and views over the city and hills. The area had social status already associated with addresses in nearby Mount Street and access to the city's piped water system. The area was subdivided into large residential lots for development and proceed accordingly. The homes built in West Perth from the early 1900s included prestigious mansions built in prominent locations and smaller working-class cottages in the narrower back streets and towards the northern end of the area adjacent to the railway.
Outram Street had several houses on it by 1900, more on the east side than the west, but numbering was not allocated, making it difficult to trace dates of construction.
Post Office directories show that the house was first listed in 1903 and allocated street Nos. 82-82a which changed to No. 96-98 in 1908. The houses were first occupied by Mrs Jane Corless and Mrs Hugh James. The Metropolitan Water Supply Survey plan (1953) shows an attached pair with full length front verandahs, and a

weatherboard section containing the bathroom at the rear of the brick section. A weatherboard outbuildings and brick WC were located on the back boundary.
Aerial photos show that the rear extension was built in 2002. It is a large double storey steel framed office space, visible from the street.
A real estate advertisement in 2021 shows the interior. The building retains original features such as skirtings, moulded cornices, fireplace openings, coloured glass window top lights, air vents, and moulded arches. Some original walls have been removed but nibs remain. The addition is a pitched roof space with a glazed wall and balcony on the south side at upper floor level, and scape for covered carparking underneath. From the street the building is still readable as a single storey, semi-detached pair, and part of a row of three similar (92-94 and 100-102) either side. There is a firewall that divides the houses that continues through to the front verandah space. The front elevation is limestone with face brick quoining to openings. Verandahs are under a separate roof with decorative timber roofs. The walls under the windows to the front elevation are rendered. Doors and windows are original timber framed, however the windows have iron bars over them for security. At 2022, the property is No. 98, with both former houses under the same ownership. The building is used as offices.

HISTORY

West Perth developed as suburban residential area in the late 1890s. From its inception it had the characteristics of a quality neighbourhood. Proximity to the city centre and Kings Park (then known as Perth Park), and the elevated location provided healthy site drainage as well as cooling breezes and views over the city and hills. The area had social status already associated with addresses in nearby Mount Street and access to the city's piped water system. The area was subdivided into large residential lots for development and proceed accordingly. The homes built in West Perth from the early 1900s included prestigious mansions built in prominent locations and smaller working class cottages in the narrower back streets and towards the northern end of the area adjacent to the railway.
Outram Street had several houses on it by 1900, more on the east side than the west, but numbering was not allocated, making it difficult to trace dates of construction. Post Office directories show that the house was first listed in 1905 and allocated street No. 83 which changed to No. 99 in 1908. The house was first occupied by John Varley. The Metropolitan Water Supply Survey plan (1953) shows a small square footprint to the house, unlike others in the street. It has a half-length front verandah, a small verandah at the rear of the house, and a galvanised iron outbuilding in the back yard. Aerial photos show that the house has changed little in size. The back yard has been cleared for car parking space.
The roof is a simple half hip, with tall, corbelled chimneys and a gable over the projecting bay with half-timbered effect and pebbledash. There is a dropped roof bull nose verandah, with timber frieze and brackets (not

original), and a separate awning over the projecting bay sash windows. The sash windows have stucco sills, and the face brick has been painted on the street and north side elevation.
At 2022 the former house is used for offices.

PHYSICAL DESCRIPTION

Architectural Style 1 General	Federation (c.1890-c.1915)
Architectural Style 1 Specific	Queen Anne
Architectural Style 2 General	
Architectural Style 2 Specific	
Archaeology	
Physical Description	

Single storey former pair of attached houses adapted to commercial use. Similar to numbers 96-98 and 92-94 adjacent. External walls painted, previously tuck-pointed, brick. The front elevation features painted brick gables. The roof is corrugated iron or zincalume with no chimneys evident. The front verandah is concrete with timber posts and freize. Doors have been altered two both former houses with one relocated and the other removed and replaced with a window. Windows are generally original double hung sashes. The building has been extensively altered with a two storey extension to the rear which is not included in the assessment.
Internally the building has undergone extensive alterations. The two former passageways have been opened into one passage, walls have been removed to create open reception rooms etc. Generally details including skirtings, architraves, doors ceilings etc are recent.
The building is part of an intact group of attached pairs of former cottages in Outram Street.

HISTORY

West Perth developed as suburban residential area in the late 1890s. From its inception it had the characteristics of a quality neighbourhood. Proximity to the city centre and Kings Park (then known as Perth Park), and the elevated location provided healthy site drainage as well as cooling breezes and views over the city and hills. The area had social status already associated with addresses in nearby Mount Street and access to the city's piped water system. The area was subdivided into large residential lots for development and proceed accordingly. The homes built in West Perth from the early 1900s included prestigious mansions built in prominent locations and smaller working-class cottages in the narrower back streets and towards the northern end of the area adjacent to the railway.
Outram Street had several houses on it by 1900, more on the east side than the west, but numbering was not allocated, making it difficult to trace dates of construction. Post Office directories show that the house was first

listed in 1904 and allocated street Nos. 84-84a which changed to No. 100-102 in 1908. The houses were first occupied by Frank Kenworthy and Mrs Jane Morrison. The Metropolitan Water Supply Survey plan (1953) shows the attached pair, with front and outer edge return verandahs. They had a galvanised iron portion at the back of the brick section, and rear verandahs leading to various outbuildings along the back lane.
Aerial photos show that the rear was extended in c. 1980. This is a large office space at first floor level, with space for carparking underneath. A real estate advertisement in March 2021 shows that the interior has few original features, and most rooms have been modified to suit a medical purpose. Ceilings appear new and doors have been removed. Some sash windows remain and some detailing to the original passageway (skirtings, architraves) that has been widened by the removal of the internal dividing wall.
From the street, the building presents as two separate former semi-detached houses, although the firewall that divided them has been penetrated with an archway opening. Pairs of sash windows face the street, covered in iron bars for security, and the entrance is around the return verandah on the south side, with top and side lights. There are two gables and a bull nose verandah with turned timber posts. The verandah floor has been lost.
The building is part of a row of three similar (92-94 and 96-68) adjacent. At 2022 both former houses are under the same ownership, and they have been adapted for medical consulting rooms.

HISTORY

West Perth developed as suburban residential area in the late 1890s. From its inception it had the characteristics of a quality neighbourhood. Proximity to the city centre and Kings Park (then known as Perth Park), and the elevated location provided healthy site drainage as well as cooling breezes and views over the city and hills. The area had social status already associated with addresses in nearby Mount Street and access to the city's piped water system. The area was subdivided into large residential lots for development and proceed accordingly. The homes built in West Perth from the early 1900s included prestigious mansions built in prominent locations and smaller working-class cottages in the narrower back streets and towards the northern end of the area adjacent to the railway.
Outram Street had several houses on it by 1900, more on the east side than the west, but numbering was not allocated, making it difficult to trace dates of construction. Post Office directories show that the house was first listed in 1904 and allocated street No. 85 which changed to No. 103 in 1908. The house was first occupied by Frederick G Shaw and Walter F. Croft.
The Metropolitan Water Supply Survey plan (1953) shows the house with a symmetrical front, with two projecting bays to the street, and a full length verandah. Aerial photos show that by c. 1983 the house is being

used for offices, as the rear garden has been cleared for carparking and a carport erected. From the street the house has a combination hipped roof with street facing gables, with half-timber effect and rough caste render. There are tall brick corbelled chimneys. The original timber floorboards and posts on the verandah have been lost, and simple classical Doric columns (not original) support the corrugated iron verandah roof. Two symmetrical bay windows frame the entry. Foundations in limestone are visible at ground level.

HISTORY

West Perth developed as suburban residential area in the late 1890s. From its inception it had the characteristics of a quality neighbourhood. Proximity to the city centre and Kings Park (then known as Perth Park), and the elevated location provided healthy site drainage as well as cooling breezes and views over the city and hills. The area had social status already associated with addresses in nearby Mount Street and access to the city's piped water system. The area was subdivided into large residential lots for development and proceed accordingly. The homes built in West Perth from the early 1900s included prestigious mansions built in prominent locations and smaller working-class cottages in the narrower back streets and towards the northern end of the area adjacent to the railway.
Outram Street had several houses on it by 1900, more on the east side than the west, but numbering was not allocated, making it difficult to trace dates of construction. Post Office directories show that the house was first listed in 1903 and allocated street No. 86 which changed to No. 104 in 1908. The house was first occupied by Frank R. Perrot. The Metropolitan Water Supply Survey plan (1953) shows a large free-standing house with two projecting bays and a front verandah. The rear portion of the house was weatherboard, and the house had its own water tank. Weatherboard outbuildings were located on the north side boundary fence line.
Aerial photos show that a flat roofed carport at the rear was added in between 1995 to 2000.The former house has been rendered. It has a hipped corrugated iron roof. The symmetrical façade has faceted bays to either side of the front entry with pyramidal roofs over. The verandah under a separate roof is not original; but is a concrete

flat roof with concrete pillars. The doors and sash windows are not original, and the verandah floor has been tiled.
At 2022 the former house is used for professional offices.

HISTORY

West Perth developed as suburban residential area in the late 1890s. From its inception it had the characteristics of a quality neighbourhood. Proximity to the city centre and Kings Park (then known as Perth Park), and the elevated location provided healthy site drainage as well as cooling breezes and views over the city and hills. The area had social status already associated with addresses in nearby Mount Street and access to the city's piped water system. The area was subdivided into large residential lots for development and proceed accordingly. The homes built in West Perth from the early 1900s included prestigious mansions built in prominent locations and smaller working class cottages in the narrower back streets and towards the northern end of the area adjacent to the railway.
Outram Street had several houses on it by 1900, more on the east side than the west, but numbering was not allocated, making it difficult to trace dates of construction. Post Office directories show that the house was first listed in 1903 and allocated street No. 88 which changed to No. 106 in 1908. The house was first occupied by William Mason. The Metropolitan Water Supply Survey plan (1953) shows an asymmetrical frontage to the house, which has a projecting bay to the south side and a half-length verandah. There were two large asbestos

outbuilding in the back yard. Aerial photos show that the rear carport was added in c. 2007. A real estate advertisement in June 2019 for the sale of the property showed high ornate ceilings, decorative timber and tiled fireplaces with elaborate mantles, moulded cornices and high skirtings. The front door has coloured glass to the door panels, top and side lights. At 2022, when viewed from the street, the house has a hipped roof with a small conical roof form over the bay window. There is a bullnose verandah along the front elevation supported by ornate timber brackets. There are mini timber brackets or consoles to the underside of the eaves at frieze level along the front facade. Three, tall brick chimneys are corbelled with stucco render at base and head. There is a parapet on the south facing elevation, tuckpointing to the facade of the street elevation with rendered bands, timber sash windows, and stained leadlight in the door top and side lights entry. From the street the front elevation is partly obscured by a high brick wall, not original. An air con unit penetrates one of the windows on the faceted bay at the front, and the verandah floor is concrete, painted red.
The former house is used for offices.

Builder	
Other Associations	

HISTORY

West Perth developed as suburban residential area in the late 1890s. From its inception it had the characteristics of a quality neighbourhood. Proximity to the city centre and Kings Park (then known as Perth Park), and the elevated location provided healthy site drainage as well as cooling breezes and views over the city and hills. The area had social status already associated with addresses in nearby Mount Street and access to the city's piped water system. The area was subdivided into large residential lots for development and proceed accordingly. The homes built in West Perth from the early 1900s included prestigious mansions built in prominent locations and smaller working-class cottages in the narrower back streets and towards the northern end of the area adjacent to the railway.
Outram Street had several houses on it by 1900, more on the east side than the west, but numbering was not allocated, making it difficult to trace dates of construction. Post Office directories show that the house was first listed in 1903 and allocated street No. 90 which changed to No. 108 in 1908. The house was first occupied by Arthur Forsaith. The Metropolitan Water Supply Survey plan (1953) shows an asymmetrical front with a projecting bay on the north side and a small verandah. There were several pathways marked on the plan,

leading around to the back yard, to the rear laneway, and to galvanised iron outbuildings on the south boundary fence line.
Aerial photos show that there was a carport built at the rear between 1985 to 1995.From the street, the house presents as a single-story residential dwelling with a combination hipped and gable roof. The street facing gable is plain, having lost its timber and rough cast rendered detailing (described in the 1999 Draft MHI). Small timber brackets tie the flying gable to the wall. The roof and awning are new Colorbond. The verandah roof is supported by a brick rendered column (not original). The tall face brick corbelled chimneys with terracotta pots have stucco render applied to head and base of chimneys, an indication that the house was originally face brick; now painted render.
At 2022 the place is used for offices.

HISTORY

West Perth developed as suburban residential area in the late 1890s. From its inception it had the characteristics of a quality neighbourhood. Proximity to the city centre and Kings Park (then known as Perth Park), and the elevated location provided healthy site drainage as well as cooling breezes and views over the city and hills. The area had social status already associated with addresses in nearby Mount Street and access to the city's piped water system. The area was subdivided into large residential lots for development and proceed accordingly. The homes built in West Perth from the early 1900s included prestigious mansions built in prominent locations and smaller working class cottages in the narrower back streets and towards the northern end of the area adjacent to the railway.
Outram Street had several houses on it by 1900, more on the east side than the west, but numbering was not allocated, making it difficult to trace dates of construction. Post Office directories show that the house was first listed in 1905 and allocated street No. 92 which changed to No. 110 in 1908. The house was first occupied by William Thomas. The Metropolitan Water Supply Survey plan (1953) shows the house with a long verandah addressing both Outram Street and Wellington Streets. The steps to the verandah were on the Outram Street elevation.
Aerial photos show that the front wall and roof cover was built between 1985 and 1995. The State Library of Western Australia holds a photo dated 1983 (312074PD) showing the former house as Wellington's Garden Restaurant.

At 2022, the Wellington Street elevation has the main entrance (not original), and the corner and Outram Street elevations are obscured by a painted brick wall, and a roof cover has been added between the original house and the wall. The former house is a GP/medical consulting rooms.

HISTORY

Nos.17-21 are located on Lot Y164, which was originally owned by George Shenton, then James MacKay, agent. In 1902 the land was bought by Dr William Trethowan. The land appears to have remained undeveloped for a number of years, with no houses being listed along the Palmerston Street side of the rot in the Post Office directory for 1906. Dr Trethowan built the houses in 1907 along with the two-storey building on the corner of Palmerston and Newcastle Streets. The residences were leased to various people. In 1910 a number of residents are listed, suggesting this west side of Palmerston Street was well settled by 1909-10. Residents included: No.17, Mrs West, a teacher of music; No.19, Mrs Frederick Jones; and No.21, Mrs Evans.
The ownership changed in 1914. In the 1930s and 1940s the demographics of Northbridge were changing with European migrants settling in the area. In the 1980s the building was altered internally to suit the needs of the tenant WA Council on Addiction. It was later used as a backpackers hostel.

HISTORY

This cottage is located on Lot Y166 which is registered in the City's rate books for 1891 as being owned by Mrs J. Talbot Hobbs. Her husband J.J. Talbot Hobbs, the eminent architect and soldier, is registered as owning the adjoining property on the corner of Newcastle and Palmerston Streets. The Hobbs acquired lots Y166 and Y167 in circa.1891 1892, the previous owner appears to have been the surgeon Edward Scott. It is probable the house was erected for investment purposes. Whether Talbot Hobbs designed the place has not been established.

WESTERN AUSTRALIAN HISTORIC THEME

1. Demographic settlement and mobility - 107 Settlements
3. Occupations - 306 Domestic activities
5. Outside influences - 504 Depression and boom

AUSTRALIAN HISTORIC THEME

4. Building Perth (Settlements & Cities) - 4.1.3 Learning to live with property booms & busts
8. Developing Perth's Cultural Life - 8.13 Living in cities and suburbs

STATEMENT OF SIGNIFICANCE

The place has interest as a modestly detailed Federation Bungalow style of residential building.
The place forms an integral part of a group of residential buildings and contributes to the historic character of the area.
The place reflects the expansion and development of residential and commercial buildings on the city fringes during the rapid population increase of the 1890's gold boom and the early years of the twentieth century.
The place represents the changing demographic character of the city fringe of Perth as expansion of transport services enabled the more well-to-do members of society to move further afield to newly developed suburbs.
The place represents the changing character of the local community from the typically heterogeneous population of the gold boom of the 1890's to the increasing concentration of ethnic minorities in the course of the twentieth century.
The place is associated with J.J. Talbot Hobbs, the eminent architect and soldier.
The single storey residence forms part of a streetscape that contributes to the community's sense of place.
The place is rare as an example of a late nineteenth century residential building still extant within close proximity to Perth City centre.
The place is representative as an example of a modest residential building dating from the late nineteenth century.

HISTORY

The Cathedral was constructed in 1936, paid for largely by contributions from members of the Castellorigian Association.
The church design was based on the Saint Constantine and Helena Church on the island of Kastellorigo - birthplace of many of the community's pioneers. The alter facade was painted by local Greek artist, Vlase Zanalis.
The church was consecrated on 18 April 1937 by Metropolitan Timotheo, Archimandrite and Rev Father Manessis who served as priest from 1925 to 1955. Northbridge is an inner suburban area, named because it is just north of Perth across the railway bridge. It was approved as a suburb name in 1982.

2. Peopling Australia - 2.4.5 Changing the face of urban Perth through migration
8. Developing Perth's Cultural Life - 8.5.1 Preserving traditions and group memories
8. Developing Perth's Cultural Life - 8.6.4 Making places for worship

STATEMENT OF SIGNIFICANCE

The place was the first purpose-built Greek Orthodox Church in Western Australia, became the Orthodox Cathedral in 1972 and St. Helene remains the spiritual focus of the Greek community in Western Australia.
The place is rare as the first of only five Greek Orthodox churches in the State, and its only Cathedral.
The place is a fine though austere example of the Byzantine style externally and the interior comprises a finely designed series of spaces of a high order of aesthetic value.
The place was built in 1936-37 with funds raised by the comparatively small Greek Orthodox community in a period of considerable building activity following the Great Depression and is highly valued by the State's Greek Orthodox community for its long religious, spiritual and social associations with that community.
The place was designed by Oldham Boas Ednie-Brown, a prominent Western Australian firm of architects, and the much of the interior iconography was completed by Castellorizian born and well-known Western Australian artist, Vlase Zanalis.

NATURE OF SIGNIFICANCE

HERCON Value A - Its importance in demonstrating the evolution or pattern of Perth's history

The place was the first purpose-built Greek Orthodox Church in Western Australia, became the Orthodox Cathedral in 1972 and St. Helene remains the spiritual focus of the Greek community in Western Australia.

HERCON Value B - Its importance in demonstrating rare, uncommon or endangered aspects of Perth's heritage

The place is rare as the first of only five Greek Orthodox churches in the State, and its only Cathedral.

HERCON Value C - Its potential to yield information that will contribute to an understanding of Perth's history

HERCON Value D - Its importance in demonstrating the characteristics of a broader class of places

HERCON Value E - Any strong or special meaning it may have for any group or community because of social, cultural or spiritual associations

The place was built in 1936-37 with funds raised by the comparatively small Greek Orthodox community in a period of considerable building activity following the Great Depression and is highly valued by the State's Greek Orthodox community for its long religious, spiritual and social associations with that community.

HERCON Value F - Its importance in exhibiting particular aesthetic characteristics valued by any group or community

The place is a fine though austere example of the Byzantine style externally and the interior comprises a finely designed series of spaces of a high order of aesthetic value.
The place was designed by Oldham Boas Ednie-Brown, a prominent Western Australian firm of architects, and the much of the interior iconography was completed by Castellorizian born and well-known Western Australian artist, Vlase Zanalis.

HERCON Value G - Any special association it may have with the life or work of a person, group or organization of importance in Perth's history
HERCON Value H - Its importance in demonstrating a high degree of creative or technical achievement
HERCON Value I - Any HERCON Value I - Any other characteristic it may have that in the opinion of the decision making body is relevant

CONDITION AND AUTHENTICITY

Condition	Good
Building Fabric Authenticity	Medium level of authenticity as it is largely as originally constructed with detail intact.

CLASSIFICATION OF SIGNIFICANCE

Exceptional – Category 1 - Essential to the heritage of the locality. Rare or outstanding example.

Solidarity Park, formerly known as The Workers' Embassy, is a landscaped park containing five memorial structures. There are five memorials, two pergolas, two barbecues, various mature and immature trees, garden beds, a flagpole and two types of lights. Three of the memorials are located on the perimeter of the site. These include the People's Wall, The Wall of Remembrance and the Fountain for Youth. The Commemorative Rock and Mark Allen memorials are located facing each other just inside the east and west boundaries. The shelters are located inside the northern and southern boundaries.

HISTORY

Solidarity Park, formerly known as The Workers' Embassy, is a landscaped park containing five memorial structures. All structures in the park were constructed in 1997 during the six-month trade union occupation of the site as part of the Third Wave Campaign against industrial relations legislation reform proposed by Richard Court's coalition government.
In 1997 as a response to proposed Industrial Relations legislation which sought to limit union activity in workplaces a Worker's Embassy was established at Parliament House. After being moved on by the police a site located opposite Parliament House was chosen. This site was part road reserve of the Perth City Council and part A class Reserve vested in the State Government. The site was pegged using a prospector's licence. A caravan and other temporary structures were put on the site and it became the base for the Union's protests. Structures were added to the place to reflect the unions who were on the site and a barbeque dedicated to a union official who died while inspecting a worksite. The unions left the site in November 1997.It has been used for annual events such as May Day and as a protest site since 1997.

WESTERN AUSTRALIAN HISTORIC THEME

4. Social and civic activities - 401 Government and politics
4. Social and civic activities - 405 Sport, recreation and entertainment

AUSTRALIAN HISTORIC THEME

5. Working - 5.2 Organizing workers and workplaces
7. Governing - 7.2.1 Protesting
9. Marking the Phases of Life - 9.7.2 Mourning the dead

STATEMENT OF SIGNIFICANCE

The place was created in reaction to the Third Wave Campaign, a union protest against extensive change to Industrial Relations legislation in Western Australia and was occupied continually for over six months during these 1997 protests.
The place is highly valued by the union community and contributes to their sense of place as it reflects bonds of solidarity and united union defiance against Richard Court's Coalition Government policy in 1997.
The place contains the largest concentration of labour monuments in Western Australia and, together with the Tom Edwards Memorial in Fremantle and is one of only two labour monument sites in Western Australia.
The place is valued by parts of the community as a commemorative and protest site.

NATURE OF SIGNIFICANCE

HERCON Value A - Its importance in demonstrating the evolution or pattern of Perth's history

The place was created in reaction to the Third Wave Campaign, a union protest against extensive change to Industrial Relations legislation in Western Australia and was occupied continually for over six months during these 1997 protests.

HISTORY

Until the 1880s the town centre was characterised by the establishment of small cottages, shops and small businesses and was rural in character. The expansion of commerce following the discovery of gold in the 1890s put pressure on land in the centre of Perth with the result that most residential uses were displaced in favour of commercial development. During the 1890s and early 1900s the centre of Perth was substantially rebuilt. The period of expansion in Perth coincided with a period of economic depression in the eastern states, in particular Victoria. As a result, there was substantial migration to WA which included businessmen, architects and builders, all of whom had a considerable influence on the development of the city. Pier Street was scantly developed in 1895, but by 1900 the street is developed from the river all the way north to Newcastle Street.
The Post Office Directory first lists the building as No. 58-62 in 1903, occupied by Splatt, Wall and Co, electrical engineers. Numbering changed in 1908 to No. 36, still occupied by the same business. The Metropolitan Water Supply Survey plan (1943) shows the building as No. 36; a large brick, two-storey building with a cellar. In 1949 the post office directory lists the building as being occupied by the Central Catholic Library, a book shop, upholsterer and an importer.
From the street the place presents as a two-storey commercial building with battlement parapet and a triangular pediment; rustication to pilasters; a prominent, classical cornice and stucco decoration. It has been altered at street level with the two shop fronts not original, but the pressed tin underside of the awning may be original. There are two re-entrant doors accessed from steps at street level. Aerial photos show the roof was replaced in 2009.

HISTORY

Until the 1880s the town centre was characterised by the establishment of small cottages, shops and small businesses and was rural in character. The expansion of commerce following the discovery of gold in the 1890s put pressure on land in the centre of Perth with the result that most residential uses were displaced in favour of commercial development. During the 1890s and early 1900s the centre of Perth was substantially rebuilt. The period of expansion in Perth coincided with a period of economic depression in the eastern states, in particular Victoria. As a result, there was substantial migration to WA which included businessmen, architects and builders, all of whom had a considerable influence on the development of the city. Pier Street was scantly developed in 1895, but by 1900 the street is developed from the river all the way north to Newcastle Street.
The Post Office Directory first lists the building as No. 66 in 1902. It was occupied by Holdway, Durbridge and Co., plumbers. Numbering changed in 1908 to No.44, still occupied by the same business. The Metropolitan Water Supply Survey plan (1943) shows the building as No. 44. It is a small square footprint, with another building to the rear. In 1949 the post office directory lists the building as being occupied by various tenants including a hairdresser supplier, plumbers and a tailor.
From the street the place presents as a two-storey commercial building with its roof concealed by a parapet that displays ‘Milton Chambers’ in stucco lettering. There is a prominent classical cornice, rustication to pilasters and five, large, curved window openings to the upper level. It has been altered at street level with three separate shopfronts, all with awning to ground glazing.

The period of expansion in Perth coincided with a period of economic depression in the eastern states, in particular Victoria. As a result, there was substantial migration to WA which included businessmen, architects and builders, all of whom had a considerable influence on the development of the city. Pier Street was scantly developed in 1895, but by 1900 the street is developed from the river all the way north to Newcastle Street. The Post Office Directory first lists the house at No. 264 as No. 258 (numbering changed in 1908) in 1898, and it appears on the 1897 Perth Town Plan, dating its construction to at least that year. Over the years it lists many different occupants, suggesting it was a rental property for an investor. The Metropolitan Water Supply Survey plan (1953) shows the house with a front verandah and central path, with a rear verandah and various outbuildings. Where once this part of Pier Street was all housing, now No. 264 is the only surviving former residence. A real estate advertisement from 2010 shows a flat roofed brick addition to the rear, and that the back is paved for carparking. At 2022 it is used for commercial purposes.

HISTORY

The first bowling club in Western Australia was established on the Esplanade in 1895 in front of the old Esplanade Hotel (demolished). Lord John Forrest was the inaugural president.
In 1910 the pavilion was enlarged to make available an office and council room as headquarters for the WA Bowling Association. In 1962, the Club moved to its present location in time for the 1962 Commonwealth Games. The building was constructed c. 1970. The Tattersalls Club amalgamated with the Perth Bowling Club in the early 1970s, hence the official name of the Club being the Perth and Tattersalls Bowling and Recreation Club. The place is currently home to the Perth Bowling Club, Snooker and Billiards, City of Perth RSL, Perth Naval Association, Perth Rotary, Perth Ladies Darts Association, and the Bridges Hash House Harriers, a social running club.

HISTORY

Perth Girls' Orphanage (fmr) has an historical link with the 1864 orphanage established on the same site. Perth Girls' Orphanage (fmr) is important as the first purpose built Anglican orphanage in Western Australia. As such it has a close association with the treatment of orphans and the provision of social services at the end of the nineteenth century and during the early years of the twentieth century in Western Australia.(Ref State heritage Assessment document)In 1868 the first Girls' orphanage was established on the site using cottages that were purchased by the Church. Due to increase in numbers boys were moved to the Swan Boy's Orphanage in Middle Swan. As the number of girls at the orphanage increased, a new building was required. It was built in two stages, the first was completed in 1899 which included the east wing and chapel and the second was completed in 1904 with the completion of the west wing. The orphanage was closed during World War Two as it was close to East Perth power station and all children were moved to Middle Swan. The building was used by the Army until 1949. Ownership was transferred to the State and it was used for offices for State government departments.

Internal layout of the building was changed to suit the office requirements. Buildings around the site were demolished including the original cottages. Some restoration has been undertaken to the building.

WESTERN AUSTRALIAN HISTORIC THEME

3. Occupations - 306 Domestic activities
4. Social and civic activities - 406 Religion
4. Social and civic activities - 408 Institutions

AUSTRALIAN HISTORIC THEME

4. Building Settlements, Town and Cities - 4.3 Developing Institutions

STATEMENT OF SIGNIFICANCE

The place is important as the first purpose built Anglican orphanage in Western Australia. Subsequent changes to, and upgrading of, the fabric of the building represent response to changing ideals of child health care and sanitation in the second half of the nineteenth century and the early years of the twentieth century.
The building has historical associations with the provision of social services within the State by the Anglican Church.
The place is important to the community, originally as an orphanage and, subsequently, for its historical and aesthetic value.

NATURE OF SIGNIFICANCE

HERCON Value A - Its importance in demonstrating the evolution or pattern of Perth's history

The place is important as the first purpose built Anglican orphanage in Western Australia. Subsequent changes to, and upgrading of, the fabric of the building represent response to changing ideals of child health care and sanitation in the second half of the nineteenth century and the early years of the twentieth century.
The building has historical associations with the provision of social services within the State by the Anglican Church.

HERCON Value B - Its importance in demonstrating rare, uncommon or endangered aspects of Perth's heritage

HERCON Value C - Its potential to yield information that will contribute to an understanding of Perth's history

HERCON Value D - Its importance in demonstrating the characteristics of a broader class of places

HERCON Value E - Any strong or special meaning it may have for any group or community because of social, cultural or spiritual associations

The place is important to the community, originally as an orphanage and, subsequently, for its historical and aesthetic value.

HERCON Value F - Its importance in exhibiting particular aesthetic characteristics valued by any group or community

HISTORY

The Government Chemical Laboratory was designed by the Public Works Department of WA in 1940. The building replaced the previous facility in Wellington Street which had become unsuitable. The new site in Hay Street was already owned by the State Government and was chosen due to the lack of vibration in the ground which was an issue at the former location. Construction began in 1940 and the building was operational in 1942. It was officially opened in 1944. The building was extended in 1947 to accommodate all the additional functions and staff. A new laboratory building was constructed on the site in 1952. The laboratory was used to test physical and chemical samples for State Government departments. These included Department of Mines, Agriculture and for the police. In 2009 the functions of the building were transferred to a new facility at Curtin University in Bentley.

8. Developing Perth's Cultural Life - 8.10.5 Advancing knowledge in science & technology

STATEMENT OF SIGNIFICANCE

The Materials Science Building is rare in Western Australia for its design, which strongly emulates the international architectural style developed by Dutch architect W.M. Dudock, especially in its external form, massing and detail.
The place was the principal technical centre of the Government Chemical Laboratories (and its successive reorganisations) from 1942 to 2009, and through its scientific work contributed to the development of Western Australia's mineral & petroleum resources and agriculture in the post-World War Two era, demonstrating the value of chemical analysis to successive State Governments in the post-World War Two era.
The Materials Science Building is a good representative example of the early influence Modern Movement in State public works under the direction of Principal Architect A.E. (Paddy) Clare.
The place's laboratories and apparatus demonstrate facilities available in the Western Australian Government Chemical Laboratories (and its successive reorganisations) between 1942 and 2009.

NATURE OF SIGNIFICANCE

HERCON Value A - Its importance in demonstrating the evolution or pattern of Perth's history

Architectural Style 1 Specific	International
Architectural Style 2 General	
Architectural Style 2 Specific	
Archaeology	
Physical Description	

A ten-storey plus basement concrete government office building designed in the Late Twentieth Century International style, with elements of the Brutalist style, that includes a sculpture by Perth artist Margaret Priest, and associated entry piazza and landscaped gardens.

Walls 1 Material	Concrete - Reinforced
Walls 2 Material	Glass
Roof Material	Concrete
Architect	Oldham, Boas, Ednie-Brown & Partners
Builder	John Doust
Other Associations	

HISTORY

In 1926 the Main Roads Board, which was formalised as the Main Roads Department in 1930 with its own Act (Main Roads Act) was created to oversee the construction, access, maintenance and supervision of highways, main and secondary roads, and other roads in conjunction with local governments.
During the mineral boom of the 1950s and later during the 1960s the State Government developed the 1955 Plan for the Metropolitan Region by J A Hepburn and G Stephenson which outlined plans for the future growth of Perth. The Metropolitan Region Scheme was developed from this in 1963 which emphasised property development and modern architecture, as well as an increase in infrastructure such as a roads. The Main Roads

Department staff increased at this time and new technology such as computers led to the commissioning of a new office building.
The building included eight floors of office space, cafeteria and recreational facilities, as well as a caretakers quarters. Oldham, Boas, Ednie Brown and Partners were commissioned to design the building.
A sculpture by Perth artist Margaret Priest was commissioned for the foyer and is still used as the Main Roads emblem.
In 1993 the building was named in honour of Don Aitken which was the Commissioner of Main Roads for 22 years.

WESTERN AUSTRALIAN HISTORIC THEME

1. Demographic settlement and mobility - 108 Government Policy
2. Transport and communications - 203 Road transport
5. Outside influences - 504 Depression and boom
5. Outside influences - 507 Water, power, major transport routes

AUSTRALIAN HISTORIC THEME

3. Developing Local, Regional and National Economies - 3.8.5 Moving goods and people on land
3. Developing Local, Regional and National Economies - 3.8.7 Building and maintaining roads
4. Building Settlements, Town and Cities - 4.1 Planning urban settlement
4. Building Settlements, Town and Cities - 4.2 Supplying urban services

STATEMENT OF SIGNIFICANCE

The place illustrates the expanding role of State Government in the development of road-based infrastructure in the Late Twentieth Century in response to the post-war mineral boom, and the increased need for new office accommodation at that time.
The place is a good, substantial and intact representative example of a Late Twentieth Century International style building, with elements of the Brutalist style, which is a landmark in East Perth.
The place is a good representative example of the work of prominent Perth architectural firm Oldham, Boas, Ednie-Brown & Partners in the Late Twentieth century period.
The place is associated with Don Aitken, Commissioner of Main Roads for 22 years, and the youngest ever appointed at the age of 40.
The place is associated with Master Builder H A Doust and his son John Doust whose company specialised in the new forms of concrete construction being developed in Perth from the 1960s, including the use of pre-stressed and reinforced concrete, and slip-form construction.
The place is associated with Perth artist Margaret Priest, one of the foremost figures in post-war art in Western Australia, whose bronze sculpture adorns the buildings foyer, the design of which remains the emblem for Main Roads.

NATURE OF SIGNIFICANCE

HERCON Value A - Its importance in demonstrating the evolution or pattern of Perth's history

HISTORY

West Perth developed as suburban residential area in the late 1890s. From its inception it had the characteristics of a quality neighbourhood. Proximity to the city centre and Kings Park (then known as Perth Park), and the elevated location provided healthy site drainage as well as cooling breezes and views over the city and hills. The area had social status already associated with addresses in nearby Mount Street and access to the city's piped water system.
The area was subdivided into large residential lots for development and proceed accordingly. The homes built in West Perth from the early 1900s included prestigious mansions built in prominent locations and smaller working class cottages in the narrower back streets and towards the northern end of the area adjacent to the railway.
The 1897 Perth Town Plan shows no Prowse Street and little housing. Prowse Street was sometimes called Colin Crescent. The Post Office Directory first lists No. 2 Prowse Street in 1924. In 1930 it was 38 Colin Crescent, before changing back again to 2 Prowse Street by 1935. The Metropolitan Water Supply Survey plan (1953) shows a brick house with a full-length front verandah, part of a row of six houses on this part of Prowse Street. This house is now the only one remaining and is surrounded by modern office complexes and apartments. It is a red brick, double gabled house in the Federation Queen Anne style of architecture, and from the street presents as intact.

8. Developing Australia's Cultural Life - 8.12 Living in and around Australian homes

STATEMENT OF SIGNIFICANCE

The place has historic significance because it reflects the way of life of the wealthier residents of Perth in the late nineteenth and early twentieth century.
It has aesthetic significance as a fine example of a Federation Queen Anne style residence and contributes to the visual quality of the streetscape.
The place is a representative example of the changing character and growth of the City, being a former residence that has undergone a change of use to commercial/professional offices.
The significance of the place is increased because it remains substantially intact and is the last remaining example on Prowse Street of a bygone era.

NATURE OF SIGNIFICANCE

HERCON Value A - Its importance in demonstrating the evolution or pattern of Perth's history

The place historic significance because it reflects the way of life of the wealthier residents of Perth in the late nineteenth and early twentieth century.

HERCON Value B - Its importance in demonstrating rare, uncommon or endangered aspects of Perth's heritage

The significance of the place is increased because it remains substantially intact and is the last remaining example on Prowse Street of a bygone era.

HERCON Value C - Its potential to yield information that will contribute to an understanding of Perth's history

HERCON Value D - Its importance in demonstrating the characteristics of a broader class of places

The place is a representative example of the changing character and growth of the City, being a former residence that has undergone a change of use to commercial/professional offices.

HERCON Value E - Any strong or special meaning it may have for any group or community because of social, cultural or spiritual associations

HERCON Value F - Its importance in exhibiting particular aesthetic characteristics valued by any group or community

It has aesthetic significance as a fine example of a Federation Queen Anne style residence and contributes to the visual quality of the streetscape.

PHYSICAL DESCRIPTION

Architectural Style 1 General	Federation (c.1890-c.1915)
Architectural Style 1 Specific	Warehouse
Architectural Style 2 General	
Architectural Style 2 Specific	
Archaeology	
Physical Description	

Symmetrical two-storey commercial building in the Federation Warehouse style of architecture. The Queen Street elevation is the primary frontage and contains two entrances into the lower retail stores. The elevation is divided into three bays be semi-recessed corbelled piers, spanning three-quarters of the first-floor height from the ridge to the parapet. Each bay contains two recessed arched openings which span the two upper levels and are inlaid with timber framed windows, tongue and grove boarding and aluminium framed entrance doors and windows, set back from the wall plane of the façade. The first floor remains relatively intact, with the exception of the addition of modern signage and air-conditions units. The parapet is simply decorated with corbelling along the ridge and further corbelling and dentils between the semi-recessed piers. The section of arches contained within the first-floor elevation comprise of timber framed Diocletian (arched) windows above a spandrel of vertical tongue and grove boarding. Below this is a fixed timber framed window which stops short of the storey division. The division is expressed with a shallow awning extending past the wall plane of the building. The ground floor elevation has been modified to suit modern retail requirements. Traditional timber panelling and window and door framing has been replaced with aluminium framed doors and windows. The tiling applied to the ground floor piers is likely to have been added at the same time as these aluminium window insertions.

HISTORY

There was a rapid growth in the population of Western Australia and an increase in development in the city of Perth as a result of the prosperity from the 1890s goldrush. Many of the residential buildings located in the inner city near Queen Street were replaced with commercial buildings during this time. Queen Street was first established as a private road in the early 1890s and was acquired by the City of Perth in the late 1890s which provided more land for development close to the railway. The railway was completed in 1881 and overtook the river as the primary transport method. The west end area including Queen Street, King Street, west end of

Murray and Hay Streets and part of Wellington Street became the location of warehouses and commercial buildings due to their proximity to the railway. Between 1900 and 1910 Queen changed from residential housing to being replaced with commercial buildings. Between World War One and the beginning of the Great Depression during a time of economic prosperity more commercial buildings were constructed in the inner city. The two storey brick commercial building at No. 7-13 was built in 1910. The first occupant was J. C. Hutton Ltd, ham and bacon curers. By 1930 the building had multiple tenants, including: C. Treneman engineer; Burrows and Co electrical heating; Frazer and Best, Freecorns Ltd Tea importers; C. J. Barnier stationer, Oddam Decorators sign writer; Normal L. Burnell and Co, merchants, Westralian Knitting Mills, and the Czechoslovakian Chamber of Commerce and Consulate - N. L. Burnell was the Consul.
The Metropolitan Water Supply Survey plan (1942) shows four different businesses with re-entrant doors. The building has lost its ground floor detailing. In 2019 the building was refurbished with the assistance of a City of Perth grant, designed by Hassell and Taylor Robinson Chaney Broderick. Architect Fred Chaney said the grant of $90,000 formed only a small part of the $1.5 million restoration but ensured the building's original brick exterior and tuck-pointing was kept, as well as enhancing the property's accessibility for people with disabilities.

Architectural Style 1 Specific	Chicagoesque
Architectural Style 2 General	
Architectural Style 2 Specific	
Archaeology	
Physical Description	

Contains a two-storey rendered brick building constructed c.1930 in the Inter-War Free Classical architectural style. The building is flanked either side by rendered two storey buildings of similar scale. The floor level of the building is set above the street level, and the main entrance has been modified with the insertion of an entry ramp. Highlight windows from the basement run along the base of the building. The balanced proportion of the façade makes use of classical references, including stylised piers, entablature and vestigial pediment above the parapet. Stucco moulded horizontal banding is also used, and this traces the contours of the façade created by the piers.

The first floor elevation of the building appears uncharged from its original design and is symmetrical above the middle entablature, which marks the storey division of the building. The timber casement windows used in this section also appear original and are set below fixed highlight windows. The parapet of the building is separated from the lower facade through a horizontal double line of stucco moulding, set forward from the plane of the main façade, and supported by block-line brackets. The parapet echoes the geometry of the first-floor elevation and uses rectangular perforations to break up the recessed planes.

Due to the narrowness of Queen Street, the corrugated iron gambrel roof, which sits higher than the parapet of the street façade, cannot be seen from the Queen Street level. The original structure of the horizontal awning, which is set below the story division, is clad with non-original fabric which mars the overall impression of the structure. The entrance of 16 Queen Street has been modified with the insertion of a concrete ramp into the building.

HISTORY

There was a rapid growth in the population of Western Australia and an increase in development in the city of Perth as a result of the prosperity from the 1890s goldrush. Many of the residential buildings located in the inner city near Queen Street were replaced with commercial buildings during this time. Queen Street was first established as a private road in the early 1890s and was acquired by the City of Perth in the late 1890s. The acquisition provided more land close to the railway which could be developed.
As the railway, completed in 1881, overtook the river as the primary transport method the west end area including Queen Street, King Street, west end of Murray and Hay Streets and part of Wellington Street became the location of warehouses and commercial buildings due to their proximity to the railway.
Between World War One and the beginning of the Great Depression during a time of economic prosperity more commercial buildings were constructed in the inner city.

WESTERN AUSTRALIAN HISTORIC THEME

8. Developing Perth's Cultural Life - 8.10.4 Designing and building fine buildings

STATEMENT OF SIGNIFICANCE

The place is of aesthetic significance as a fine example of a two-storey rendered brick building in the Inter-War Chicagoesque architectural style.
The place is of aesthetic significance as an example of a commercial building constructed during the Inter-War period.
The building is of aesthetic significance for its design which reflects the optimistic and affluent period following World War One. The place is of aesthetic significance as part of a streetscape comprising eight commercial buildings dating from the early twentieth century.
The place is of historic significance because it reflects the expansion of commerce and trade in the city between the end of World War One and the beginning of the Great Depression.
The place is rare as part of a relatively intact streetscape of inner-city commercial buildings from the early twentieth century. The place is a representative example of a commercial building constructed in Perth following the end of World War One.

NATURE OF SIGNIFICANCE

Physical Description	

20 Queen Street, one of the earliest buildings of the Heritage Area, is a fine example of a commercial building in the Federation Warehouse style of architecture. The building is a two storey brick structure with a rendered street façade and although modifications to the ground floor windows have been made, the building remains close to its original form.
The two stories are divided horizontally be a wide spandrel spanning the width of the elevation. The spandrel was originally used to house signage lettering the building. Below, and supporting this spandrel, are empahsised piers, dividing the elevation into three bays. Large glazed windows (not original) are set into two of the bays, while the south bay contains the main entrance. The double swing entrance doors are encased by a thin, metal frame with double bi-fold barred gates and capped with a simplified pediment.
The bays are echoed in the first-floor elevation by arches, which are emphasised by stucco moulding and keystones. The windows encased by the arches are timber framed Diocletian windows, and are original to the building. The sunshade fixed to the arched windows are a later addition and intrusive to the aesthetics of the building. The parapet is symmetrical and is pattered with a sequence of square and rectangular outlines. The sunshades fixed to the arched windows are a later addition and intrusive with a sequence of square and rectangular outlines.

Queen Street was first established as a private road in the early 1890s and was acquired by the City of Perth in the late 1890s which provided more land for development close to the railway. The railway was completed in 1881 and overtook the

river as the primary transport method. The west end area including Queen Street, King Street, west end of Murray and Hay Streets and part of Wellington Street became the location of warehouses and commercial buildings due to their proximity to the railway. Between World War One and the beginning of the Great Depression during a time of economic prosperity more commercial buildings were constructed in the inner city. The Post Office Directory shows that the numbering used to be different prior to 1908. Commercial building at No. 20 was built in c.1898. It was a clothing manufacturer, various business names, for the first decade and from 1908 it was occupied by Atkins and Co, oil and general merchants. In 1930 it was 'Nestle and Anglo Swiss Condensed Milk Co'. In 1949 the place was Perth Hat Mill, millinery manufacturers.
A 1986 photo on the inHerit database shows that since then the front façade has been modified with two openings made below the two original high-level horizontal windows, to make larger windows.
At 2022 the building is occupied as the EF International Language Campus.

HISTORY

There was a rapid growth in the population of Western Australia and an increase in development in the city of Perth as a result of the prosperity from the 1890s goldrush. Many of the residential buildings located in the inner city near Queen Street were replaced with commercial buildings during this time. Queen Street was first established as a private road in the early 1890s and was acquired by the City of Perth in the late 1890s which provided more land for development close to the railway. The railway was completed in 1881 and overtook the river as the primary transport method. The west end area including Queen Street, King Street, west end of Murray and Hay Streets and part of Wellington Street became the location of warehouses and commercial buildings due to their proximity to the railway. Between 1900 and 1910 Queen changed from residential housing to being replaced with commercial buildings. Between World War One and the beginning of the Great

Depression during a time of economic prosperity more commercial buildings were constructed in the inner city. Mortlock's Building is a three-storey commercial building with basement. Each level features different architectural detail. The entrance to one side of the façade is distinguished by an oval window above prominent, classically-detailed brackets supporting a stucco awning. The pediment displays the date 1907. Mortlock Brothers was established 1896. They were a manufacturer, agent and importer of motorcycle components and accessories, gun metal, iron valves, cutlery and files. They were at this location (No. 30, numbering changed in 1908) from 1900, possibly in a different or temporary warehouse before construction of the current building. By 1903 other tenants were also located in the building including a leather merchant and leather goods manufacturer. A State Library of WA photograph 032413PD dated c. 1915 displays the products they sold. By c. 1920 Mortlock Bros. had relocated to a new building at 914 Hay Street and expanded into the motorcar industry. The building on Queen Street was referred to as Mortlock's Building in the post office directory (1930) even after the business was no longer located in it.

HISTORY

There was a rapid growth in the population of Western Australia and an increase in development in the city of Perth as a result of the prosperity from the 1890s goldrush. Many of the residential buildings located in the inner city near Queen Street were replaced with commercial buildings during this time. Queen Street was first established as a private road in the early 1890s and was acquired by the City of Perth in the late 1890s which provided more land for development close to the railway. The railway was completed in 1881 and overtook the river as the primary transport method. The west end area including Queen Street, King Street, west end of Murray and Hay Streets and part of Wellington Street became the location of warehouses and commercial buildings due to their proximity to the railway. Between 1900 and 1910 Queen changed from residential housing to being replaced with commercial buildings. Between World War One and the beginning of the Great Depression during a time of economic prosperity more commercial buildings were constructed in the inner city. No 34 was numbered No. 32 and No. 36 on the 1942 Metropolitan Water Supply Survey plan. It is a two-storey red brick building with a central entry. It has a simple parapet and arched windows. At ground floor level one side has lost its original large window opening which has been replaced with a roller door. In 1903 the building is first listed, but unnumbered. No. 32 was occupied by a leather goods manufacturer, and No. 36 was a clothier's

warehouse. In 1920 and up to at least 1949, the post office directory lists this building as a Salvation Army Men's Home.
In 2012 the building was refurbished and the roof replaced. At 2021, the building is occupied by four different tenants.

Builder	
Other Associations	Plaistowe and Co

HISTORY

West Perth developed as suburban residential area in the late 1890s. From its inception it had the characteristics of a quality neighbourhood. Proximity to the city centre and Kings Park (then known as Perth Park), and the elevated location provided healthy site drainage as well as cooling breezes and views over the city and hills. The area had social status already associated with addresses in nearby Mount Street and access to the city's piped water system. The area was subdivided into large residential lots for development and proceed accordingly. The homes built in West Perth from the early 1900s included prestigious mansions built in prominent locations and smaller working class cottages in the narrower back streets and towards the northern end of the area adjacent to the railway.
Hugh Plaistowe was born in London where he worked in his father's confectionery business. In 1890 the Silverpan Confectionary Co. was established in Marquis Street, West Perth (this street is no longer extant; approx. location is west of the Freeway entrance at Wellington Street, near Watertown shopping complex). Plaistowe joined the company in 1895. In 1904 the name was changed to Plaistowe and Co, as a partnership between Plaistowe and Mr J. Hobbs. The Government wanted to resume the land in 1911 (for the Metropolitan Markets) so Plaistowe began construction of a new plant on Havelock Street. Interrupted by WWI the factory

finally began operations in 1915. The Post Office Directory first lists 'New factory, office and showrooms for Plaistowe and Co, chocolate and confectionary manufacturers and importers' at 149-163 Havelock Street (later 155 Havelock Street).In 1920 the company expanded and a new building was constructed that occupied an area of three and a half acres at the corner of Havelock Street and Railway Parade, with frontages to both streets, the whole making an imposing block, and housing a staff of approximately 300. Plaistowe expanded its operations beyond confectionery and, from the early days, had a very active research and development operation. The Metropolitan Water Supply Survey plan (1951) show a complex that extends for much of the area between Havelock, Railway and Sutherland Streets.
Plaistowe was acquired by Nestlé in the early 1990s. The brand is now applied only to cooking chocolate products and cocoa.
Today the former Plaistowe's complex is the Plaistowe Lane/City West Commercial Centre and the former section of Havelock Street has been renamed Plaistowe Mews.

WESTERN AUSTRALIAN HISTORIC THEME

1. Demographic settlement and mobility - 106 Workers
3. Occupations - 310 Manufacturing and processing
3. Occupations - 308 Commercial services and industries

AUSTRALIAN HISTORIC THEME

STATEMENT OF SIGNIFICANCE

The place, a factory complex, warehouses and offices built 1915-1920, has aesthetic significance as an example of a Inter-War Warehouse.
The place is a landmark in the area and contributes to the streetscape.
It has historic significance and rarity value as one of the few warehouse buildings in Perth dating from the period following World War One.
The company was a large employer and the place has social value for the many people that worked there.

NATURE OF SIGNIFICANCE

HERCON Value A - Its importance in demonstrating the evolution or pattern of Perth's history

It has historic significance and rarity value as one of the few warehouse buildings in Perth dating from the period following World War One.

HERCON Value B - Its importance in demonstrating rare, uncommon or endangered aspects of Perth's heritage

The place is a landmark in the area and contributes to the streetscape.

HERCON Value C - Its potential to yield information that will contribute to an understanding of Perth's history

HERCON Value D - Its importance in demonstrating the characteristics of a broader class of places

HERCON Value E - Any strong or special meaning it may have for any group or community because of social, cultural or spiritual associations

The company was a large employer and the place has social value for the many people that worked there.

HERCON Value F - Its importance in exhibiting particular aesthetic characteristics valued by any group or community

The place has aesthetic significance as an example of a Inter-War Warehouse.

HERCON Value G - Any special association it may have with the life or work of a person, group or organization of importance in Perth's history

HERCON Value H - Its importance in demonstrating a high degree of creative or technical achievement

HERCON Value I - Any HERCON Value I - Any other characteristic it may have that in the opinion of the decision making body is relevant

CONDITION AND AUTHENTICITY

Condition	Good
Building Fabric Authenticity	Medium. Largely as originally constructed with detail intact.

CLASSIFICATION OF SIGNIFICANCE

Considerable – Category 2 - Very important to the heritage of the locality.

HISTORY

West Perth developed as suburban residential area in the late 1890s. From its inception it had the characteristics of a quality neighbourhood. Proximity to the city centre and Kings Park (then known as Perth Park), and the elevated location provided healthy site drainage as well as cooling breezes and views over the city and hills. The area had social status already associated with addresses in nearby Mount Street and access to the city's piped water system.
The area was subdivided into large residential lots for development and proceed accordingly. The homes built in West Perth from the early 1900s included prestigious mansions built in prominent locations and smaller working class cottages in the narrower back streets and towards the northern end of the area adjacent to the railway.
The house was most likely built in 1907, as it was first listed in the Post Office Directory in 1908 as ‘St Ives’, occupied by Harold J. Mortlock. He was one of the Mortlock Brothers, who established their business in 1896 in motorcycles and later motor cars, located at 36 Queen Street from 1900 (Mortlock’s Building). A later occupant was Henry Overheu (1930) and Matilda Overheu (1939).
The Metropolitan Water Supply Survey plan (1955) shows the footprint with its circular corner and verandah, and rear lane access to a brick garage.

The area was subdivided into large residential lots for development and proceed accordingly. The homes built in West Perth from the early 1900s included prestigious mansions built in prominent locations and smaller working class cottages in the narrower back streets and towards the northern end of the area adjacent to the railway.
Four flats in a two storey brick building at 23 Rheola Street were designed by architects G. H. (Herbert) Parry and Marshall Clifton.
A tender was called for their construction in June 1937. ‘Suffolk Flats’ were first listed in the Post Office Directory in 1939. The Metropolitan Water Supply Survey plan (1955) shows a curved corner verandah and the staircase entry on the west side. Garages are at the rear, accessed from the rear lane.

HISTORY

West Perth developed as suburban residential area in the late 1890s. From its inception it had the characteristics of a quality neighbourhood. Proximity to the city centre and Kings Park (then known as Perth Park), and the elevated location provided healthy site drainage as well as cooling breezes and views over the city and hills. The area had social status already associated with addresses in nearby Mount Street and access to the city's piped water system.
The area was subdivided into large residential lots for development and proceed accordingly. The homes built in West Perth from the early 1900s included prestigious mansions built in prominent locations and smaller working class cottages in the narrower back streets and towards the northern end of the area adjacent to the railway.
Post Office directories show that the house was first listed in 1902 and allocated a street number (No. 11) which changed to No. 1 in 1908. The house was first occupied by Louis and Lily Seeligson. They were one of the earliest Jewish families in Perth. Within a few years they moved to 14 Outram Street (See that place record for more information).The Metropolitan Water Supply Survey plan (1954) shows a brick house with a small projecting bay to the street and a half-length front verandah, with a narrow portion of the rear of the house in weatherboard. Aerial photos show the rear portion has been modified since the 1960s and is now brick with a skillion roof. The house has an unusual dual hipped roof with a central valley, and from the street has a decorative gable on one side with a finial and a ‘candle snuffer’ or pyramidal roof on the other. The projecting bay has a concave awning and triple multipaned sash windows. The house shows elements of the Federation Arts and Crafts/Queen Anne styles of architecture.

In 2022 the place is used for offices.

WESTERN AUSTRALIAN HISTORIC THEME

3. Occupations - 306 Domestic activities

AUSTRALIAN HISTORIC THEME

4.Building Perth (Settlements & Cities) - 4.1.2 Making suburbs

8. Developing Australia's Cultural Life - 8.10.4 Designing & building fine buildings
8. Developing Australia's Cultural Life - 8.13 Living in cities & suburbs

STATEMENT OF SIGNIFICANCE

The place has historic significance because it reflects the way of life of the wealthier residents of Perth in the late nineteenth and early twentieth century.
It has aesthetic significance as an unusual example of a Federation Queen Anne/Arts and Crafts style residence and contributes to the visual quality of the streetscape.
The place is a representative example of the changing character and growth of the inner City, being a former residence that has undergone a change of use to commercial/professional offices.

NATURE OF SIGNIFICANCE

HERCON Value A - Its importance in demonstrating the evolution or pattern of Perth's history

The place has historic significance because it reflects the way of life of the wealthier residents of Perth in the late nineteenth and early twentieth century.

HERCON Value B - Its importance in demonstrating rare, uncommon or endangered aspects of Perth's heritage

HISTORY

West Perth developed as suburban residential area in the late 1890s. From its inception it had the characteristics of a quality neighbourhood. Proximity to the city centre and Kings Park (then known as Perth Park), and the elevated location provided healthy site drainage as well as cooling breezes and views over the city and hills. The area had social status already associated with addresses in nearby Mount Street and access to the city's piped water system.
The area was subdivided into large residential lots for development and proceed accordingly. The homes built in West Perth from the early 1900s included prestigious mansions built in prominent locations and smaller working class cottages in the narrower back streets and towards the northern end of the area adjacent to the railway.
Post Office directories show that the house was first listed in 1900 and allocated a street number (No. 14 which changed to No. 4 in 1908. The house was first occupied by Thomas Britnall, and Mrs Britnall was still the occupant in 1940. The Metropolitan Water Supply Survey plan (1954) shows the house with the same footprint as today, with several outbuildings along the rear lane.
From the street the single storey former house has a strong symmetrical element in the elevation with a bullnose verandah supported by sparingly decorated timber posts, flanked by pairs of full height windows. There is wrought iron lacework at trellis height of the verandah, tall brick corbelled chimneys, stucco rendered bands and

a simple hipped roof. The original doorway and entrance retains its stained leadlight glass. Alterations include a concrete slab replacing the timber floor boards on the front verandah, and brick paving to the front garden, used for carparking. At 2022 the place is used for medical offices.

The area had social status already associated with addresses in nearby Mount Street and access to the city's piped water system.
The area was subdivided into large residential lots for development and proceed accordingly. The homes built in West Perth from the early 1900s included prestigious mansions built in prominent locations and smaller working class cottages in the narrower back streets and towards the northern end of the area adjacent to the railway.
Post Office directories show that the house was first listed in 1901 and later allocated a street number (No. 17) which changed to No. 7 in 1908. The house was first occupied by George E Armstrong. The Metropolitan Water Supply Survey plan (1954) shows a large house, a projecting bay with a wraparound verandah.
Aerial photos show the rear roof cover (carport) was replaced in 2010, but otherwise the roof formation remains as original. From the street the house is limestone with brick quoining and has a dropped verandah roof with timber brackets and posts. The roof has a half gable over the projecting bay, and three tall, corbelled chimneys.
At 2022 the place is used for medical consulting rooms.

HISTORY

West Perth developed as suburban residential area in the late 1890s. From its inception it had the characteristics of a quality neighbourhood. Proximity to the city centre and Kings Park (then known as Perth Park), and the elevated location provided healthy site drainage as well as cooling breezes and views over the city and hills. The area had social status already associated with addresses in nearby Mount Street and access to the city's piped water system.
The area was subdivided into large residential lots for development and proceed accordingly. The homes built in West Perth from the early 1900s included prestigious mansions built in prominent locations and smaller working class cottages in the narrower back streets and towards the northern end of the area adjacent to the railway.
Post Office directories show that the house was first listed in 1902 and later allocated a street number (No. 21) which changed to No. 9 in 1908. The house was first occupied by Albert Edwin Thurston. He operated a business with Charles Bethell, called Bethell and Thurston. The company dealt in furnishings, and general imports, with their business on William Street, and a goldfields agent in Kalgoorlie.
A later long-term occupant was Hans C. Beck (c. 1930-1949). The Metropolitan Water Supply Survey plan (1954) shows the house as made of stone and brick, with a verandah that wraps around the east side. Aerial photos show that between 1985 and 1995 the rear was extended substantially. This includes a weatherboard second storey, which is visible from the street. In 2022 the place is used for offices.

HISTORY

West Perth developed as suburban residential area in the late 1890s. From its inception it had the characteristics of a quality neighbourhood. Proximity to the city centre and Kings Park (then known as Perth Park), and the elevated location provided healthy site drainage as well as cooling breezes and views over the city and hills. The area had social status already associated with addresses in nearby Mount Street and access to the city's piped water system.
The area was subdivided into large residential lots for development and proceed accordingly. The homes built in West Perth from the early 1900s included prestigious mansions built in prominent locations and smaller working class cottages in the narrower back streets and towards the northern end of the area adjacent to the railway.
Post Office directories show that the house was first listed in 1904 and allocated street numbers 23-25, which changed to Nos. 13-15 in 1908. The house was first occupied by William Purkiss (No. 13) and Wallace Chubb (No. 15). The Metropolitan Water Supply Survey plan (1954) shows the pair as mirror image, with verandahs that wrap around the outside, and side verandahs at the rear as well. Aerial photos show that between 1985 and 1995 the pair was reroofed, and between 1995 and 2000 a new building was erected at the rear. Viewed from the rear laneway, this is a steel framed, Hardiplank elevated building that creates space for covered carparking underneath.

A real estate advertisement in 2021 shows that internally there are some original features retained such as skirtings, architraves, door top lights and fireplace surrounds.
Viewed from the street the house has painted brick walls with stucco decorative window sills, rendered bands, turned timber posts and a timber verandah floor. The roof has a central half gable, and a tall corbelled chimney.
In 2022 the place is used for offices.

HISTORY

West Perth developed as suburban residential area in the late 1890s. From its inception it had the characteristics of a quality neighbourhood. Proximity to the city centre and Kings Park (then known as Perth Park), and the elevated location provided healthy site drainage as well as cooling breezes and views over the city and hills. The area had social status already associated with addresses in nearby Mount Street and access to the city's piped water system.
The area was subdivided into large residential lots for development and proceed accordingly. The homes built in West Perth from the early 1900s included prestigious mansions built in prominent locations and smaller working class cottages in the narrower back streets and towards the northern end of the area adjacent to the railway.
Post Office directories show that the semi-detached pair was first listed in 1902 and allocated a street number (Nos. 27-29) which changed to Nos. 17-19 in 1908. The Metropolitan Water Supply Survey plan (1954) shows a mirrored pair with each having a truncated corner entrance and a wraparound verandah.
From the street the fabric seems intact, with tuck pointed red brick, stucco window sills and rendered bands, turned timber verandah posts and corner gables with roughcast render and vertical timber battens. There are several tall, red brick, corbelled chimneys. In 2022 the houses are still in separate ownership, and the materiality shows they are individual properties. No. 19 is an office.

HISTORY

West Perth developed as suburban residential area in the late 1890s. From its inception it had the characteristics of a quality neighbourhood. Proximity to the city centre and Kings Park (then known as Perth Park), and the elevated location provided healthy site drainage as well as cooling breezes and views over the city and hills. The area had social status already associated with addresses in nearby Mount Street and access to the city's piped water system.
The area was subdivided into large residential lots for development and proceed accordingly. The homes built in West Perth from the early 1900s included prestigious mansions built in prominent locations and smaller working class cottages in the narrower back streets and towards the northern end of the area adjacent to the railway.
Post Office directories show that the semi-detached pair was first listed in 1902 and allocated a street number (Nos. 27-29) which changed to Nos. 17-19 in 1908. The Metropolitan Water Supply Survey plan (1954) shows a mirrored pair with each having a truncated corner entrance and a wraparound verandah.
From the street the fabric seems intact, with tuck pointed red brick, stucco window sills and rendered bands, turned timber verandah posts and corner gables with roughcast render and vertical timber battens. There are several tall, red brick, corbelled chimneys. In 2022 the houses are still in separate ownership, and the materiality shows they are individual properties. No. 19 is an office.

WESTERN AUSTRALIAN HISTORIC THEME

1. Demographic settlement and mobility - 107 Settlements
3. Occupations - 306 Domestic activities

AUSTRALIAN HISTORIC THEME

4. Building Settlements, Town and Cities - 4.1.2 Making suburbs

STATEMENT OF SIGNIFICANCE

The place has historic significance because it reflects the way of life of the wealthier residents of Perth in the late nineteenth and early twentieth century.
It has aesthetic significance as a Federation Queen Anne style attached pair and contributes to the visual quality of the streetscape.
The place is a representative example of the changing character and growth of the inner City, being a former residence that has undergone a change of use to commercial/professional offices.

NATURE OF SIGNIFICANCE

HERCON Value A - Its importance in demonstrating the evolution or pattern of Perth's history

The place has historic significance because it reflects the way of life of the wealthier residents of Perth in the late nineteenth and early twentieth century.

HERCON Value B - Its importance in demonstrating rare, uncommon or endangered aspects of Perth's heritage

HERCON Value C - Its potential to yield information that will contribute to an understanding of Perth's history

HERCON Value D - Its importance in demonstrating the characteristics of a broader class of places

The place is a representative example of the changing character and growth of the inner City, being a former residence that has undergone a change of use to commercial/professional offices.

HERCON Value E - Any strong or special meaning it may have for any group or community because of social, cultural or spiritual associations

HERCON Value F - Its importance in exhibiting particular aesthetic characteristics valued by any group or community

It has aesthetic significance as a Federation Queen Anne style attached pair and contributes to the visual quality of the streetscape.

HERCON Value G - Any special association it may have with the life or work of a person, group or organization of importance in Perth's history

HERCON Value H - Its importance in demonstrating a high degree of creative or technical achievement

HERCON Value I - Any HERCON Value I - Any other characteristic it may have that in the opinion of the decision making body is relevant

CONDITION AND AUTHENTICITY

Condition	Good
Building Fabric Authenticity	High. Largely as originally constructed with detail intact.

CLASSIFICATION OF SIGNIFICANCE

Considerable – Category 2 - Very important to the heritage of the locality.

The homes built in West Perth from the early 1900s included prestigious mansions built in prominent locations and smaller working class cottages in the narrower back streets and towards the northern end of the area adjacent to the railway.
Post Office directories show that the building was first listed in 1900 and allocated street number 34, occupied by Arthur Forsaith. Numbering changed a few times, settling on Nos. 22-24 in 1908. The Metropolitan Water Supply Survey plan (1954) shows the attached pair, more modest in size than the ones either side. They are mirrored, with steps that approach from the side, leading to an adjoined porch in the centre, and full length verandahs across the front. Aerial photos show that between 1985 and 1995 the place was added to at the rear. From the street it is apparent that the verandah roof has been lost, and concrete balustrades have been added to the porch. In 2022 the place is used for offices.

The area was subdivided into large residential lots for development and proceed accordingly. The homes built in West Perth from the early 1900s included prestigious mansions built in prominent locations and smaller working class cottages in the narrower back streets and towards the northern end of the area adjacent to the railway.
Post Office directories show that the attached pair was being built in 1905, with the building contractor being John Charles Cox. The houses were listed in 1906 and allocated street numbers 38-40, which changed to Nos. 26-28 in 1908. The houses were first occupied by J. Taylor (26) and John Burns (28). The Metropolitan Water Supply Survey plan (1954) shows a mirrored pair, long and narrow. Aerial photos show that between 1985 and 1995 the place was added to at the rear. From the street the house appears as two, with separate steps leading up to each front door, and a firewall dividing the dropped, bullnose verandah roof. At 2022 the place is No. 28 and used for offices.

Physical Description	

Langley Park is an A Class Reserve of 11.7 ha overlooking the Swan River. The place is bordered by Terrace Road to the north, Riverside Drive on the south, Victoria Avenue on the West and Plain Street on the east. Between 1920, when it was officially gazetted, and 1938 when it was vested in the Perth City Council, the place was officially referred to as Reserve 12510. Buildings on Langley Park consist of the No 2 low level sewage pumping station (1913) and the changerooms and toilets (1969)
HCWA documentation July 1998

HISTORY

Langley Park consists of 11.7 hectares and was officially gazetted in 1920. The establishment of parks was closely linked to wealth with the result that Perth did not begin to develop comprehensive system of parks until after the goldrushes of the 1890's. Public debate on the lack of park land in Perth was voiced in editorials in the newspapers between 1875 and 1886. The provision of a network of parklands in central Perth and around the river were the themes central to these concerns. In 1886 following the successful reclamation of the area between William and Barrack Street for Esplanade reserve integrated system of parks along the foreshore reserve were proposed. After World War One Norman Brearley brought two bi planes back to Perth and established an airstrip on Langley Park. It was located between Victoria Avenue and Hill Street. In 1921 he established West Australian Airways Ltd and began an airmail and passenger service between Geraldton and Derby. The airfield was used until 1924 when an aerodrome opened in Maylands. In 1960 the reserve was

developed, with new plantings of olive trees and furniture added. Sports facilities were built in 1969 and in 1977 hockey and rugby grounds established. Langley Park is used for large community and sports events.

WESTERN AUSTRALIAN HISTORIC THEME

4. Building Perth (Settlements & Cities) - 4.1.5 Creating capital cities
4. Building Perth (Settlements & Cities) - 4.2 Supplying urban services (power, transport, fire prevention, roads, water, light & sewerage)
8. Developing Perth's Cultural Life - 8.1.1 Playing and watching organised sport
8. Developing Perth's Cultural Life - 8.1.3 Developing public parks and gardens

STATEMENT OF SIGNIFICANCE

The place is very highly valued for both social and cultural associations, as the venue for a large number of both organised and informal activities, including a wide range of sporting and leisure activities, exhibitions and displays, and for its association with aircraft and motor rally events.
The place was part of the ongoing reclamation of the Swan River foreshore to create a network of public open spaces and river amenities aimed at linking the city environment to the river, and is a continuation of the vision for the foreshore developed in the 1880s, which encompassed the ideals of the City Beautiful Planning Movement.
The place has considerable historic value as the site of Perth's first aerodrome between 1920 and 1924. It is associated with aviator Major Norman Brearley who established Western Australian Airways in 1921 and flew the first regular air mail service in Australia departing from this site.
Although it no longer serves as a regular airfield, the place has been in continuous use as a landing strip since 1920 and is now used by intermittent air services such as RAAF Caribou aircraft transporting accident victims to Perth.
The place is the site of the No. 2 Low Level Sewage Pumping Station which, as well as being part of Perth's first sewerage system, is an example of fine craftsmanship and design in a utilitarian structure.
The place, since its reclamation, has provided an open 'green' space with river views for city workers, residents and visitors, and contributes significantly to the Perth community's sense of place.
The Narrows Interchange, Esplanade Reserve, Supreme Court Gardens, Barrack Square and Langley Park collectively define the southern edge of the city and provide contrasting qualities in the stretch of public space adjacent to the Swan River.

NATURE OF SIGNIFICANCE

HERCON Value A - Its importance in demonstrating the evolution or pattern of Perth's history

The place was part of the ongoing reclamation of the Swan River foreshore to create a network of public open spaces and river amenities aimed at linking the city environment to the river, and is a continuation of the vision for the foreshore developed in the 1880s, which encompassed the ideals of the City Beautiful Planning Movement.

Archaeology	
Physical Description	

A two-storey building, originally with a simple rectangular plan with the only variation being the single storey lean-to that ran for the length of the west side of the building. By 1992 the function room that is on the upper level had been extended towards the west. The building was extended on both its east and west sides as part of works undertaken between 1994 and 1997.The west side of the building was also altered so that east and west faces of the building now match each other. The south side balcony that was missing in 1992 was reconstructed as part of the recent works. The entry bridge to the building has been extended in width to match the full width of the north face of the building. The building stands on circular concrete stumps. The original timber stumps are encased within the new concrete work. The upstairs function area has been reconfigured and has now been extended on both its east and west sides. Parts of the original walling were removed from within the room as part of the overall widening of the space. The alterations also included the installation of a new bar and toilet facilities.

Walls 1 Material	Timber

Other Associations	Department of Marine & Harbours – Previous owner (until 2008); WARC

HISTORY

The Western Australian Rowing Club (WARC) was established in 1868 as the first Rowing Club in the colony. Prior to the construction of the existing building in 1905, the club operated from a timber single storey boatshed at the foot of Barrack Street. The rowing clubs were a focus for not only recreational use by also for the entertainment and social activities of the residents of Perth at the turn of the century. The design of the new boatshed is attributed to Felix Whitwell who was said to be a club member and acted as honorary architect for the building. The two storey, timber framed/weatherboard building with a corrugated galvanised iron roof was built on timber piles over the river just east of Barrack Street. The new boatshed was built soon after the redevelopment of the old Barrack Street waterfront to form Barrack or Union Jack Square as it was known then. The new boatshed was financed with 10 pound debentures purchased by club members and when it was

completed contributed to the collection of buildings along the foreshore described as the “little colony of club houses at the foot of Barrack Street.” The WARC has remained in its original context for the addition on the western side, of a section of upper floor ‘lean to’ accommodation over part of the original lower floor ‘lean to’. The last 40 years saw the condition of the boatshed deteriorate, particularly the timber piles and external weatherboards. In the 1990s funds were raised jointly from a number of organisations, which ensured the boatshed returned to its original glory.

WESTERN AUSTRALIAN HISTORIC THEME

4. Social & civic activities - 405 Sport, recreation and entertainment
4. Social & civic activities - 407 Cultural activities

AUSTRALIAN HISTORIC THEME

8. Developing Perth (Australia's) Cultural life - 8.1.1 Playing and watching organised sport
8. Developing Perth (Australia's) Cultural life - 8.5 Forming Associations
8. Developing Perth (Australia's) Cultural life - 8.5.4 Pursuing common leisure interests

STATEMENT OF SIGNIFICANCE

The place is the only surviving building on the Perth Swan River foreshore from a period in the first hundred years of the colony when river activities were a focus for the business, recreational and social life of the city.
The place is the only remaining example of two storey piled timber boatshed architecture on the river and is representative of its building type and the turn of the century period.
The place provides an architectural and historic statement within the Barrack St Jetty and river foreshore developments.
The place has been in continuous use since its construction in 1905 as a rowing boatshed and club house providing recreational social facilities for its members and other sections of the Perth community.
The place houses the first established rowing club in Western Australia (established in 1868).The place is significant to the development and activities of the State’s rowing fraternity and for the association of the Club with prominent members of the community throughout its history.
The place is significant in contributing to the Perth community’s sense of place through social, cultural and recreational use of the site.

NATURE OF SIGNIFICANCE

HERCON Value A - Its importance in demonstrating the evolution or pattern of Perth’s history

The place has been in continuous use since its construction in 1905 as a rowing boatshed and club house providing recreational social facilities for its members and other sections of the Perth community.
The place houses the first established rowing club in Western Australia (established in 1868).

HERCON Value B - Its importance in demonstrating rare, uncommon or endangered aspects of Perth's heritage

The place is the only surviving building on the Perth Swan River foreshore from a period in the first hundred years of the colony when river activities were a focus for the business, recreational and social life of the city.
The place is the only remaining example of two storey piled timber boatshed architecture on the river and is representative of its building type and the turn of the century period

HERCON Value C - Its potential to yield information that will contribute to an understanding of Perth’s history

HERCON Value D - Its importance in demonstrating the characteristics of a broader class of places

HERCON Value E - Any strong or special meaning it may have for any group or community because of social, cultural or spiritual associations

The place is significant to the development and activities of the State's rowing fraternity and for the association of the Club with prominent members of the community throughout its history.
The place is significant in contributing to the Perth community's sense of place through social, cultural and recreational use of the site.

HERCON Value F - Its importance in exhibiting particular aesthetic characteristics valued by any group or community

The place provides an architectural and historic statement within the Barrack St Jetty and river foreshore developments.

HERCON Value G - Any special association it may have with the life or work of a person, group or organization of importance in Perth's history

HERCON Value H - Its importance in demonstrating a high degree of creative or technical achievement

HERCON Value I - Any HERCON Value I - Any other characteristic it may have that in the opinion of the decision-making body is relevant

CONDITION AND AUTHENTICITY

Condition	Good
Building Fabric Authenticity	The fabric of the building appears to be in a good condition. The building underwent an extensive reconstruction, restoration and building program between 1994 and 1997 and since then appears to have benefited from a regular maintenance program. The south side (the river side) is set just above water level and is in a very poor condition. In 2015, works to reconstruct and extend the existing boat deck and jetty were approved.

CLASSIFICATION OF SIGNIFICANCE

Exceptional – Category 1 - Essential to the heritage of the locality. Rare or outstanding example.

HISTORY

The area to the north of Perth (now known as Northbridge) was valued by the Whadjuk Nyoongar for its low lying and swampy lakes system, which provided abundant resources. After colonisation, this land was not settled as quickly as drier areas on the ridge of Perth. In 1854 some of the swampy land to the north of Perth was drained producing fertile land for farming. As the population grew during the convict era of the 1850s the land was subdivided into allotments circa 1860 and taken up by discharged soldiers, artisans and small landholders. The area at this period was characterised by small cottages and businesses.
In 1881 the railway from Fremantle to Guildford was opened and became the main transport route. From that period commerce and trade tended to focus on smaller commercial enterprises and manufacturing to the north. It was less fashionable to live north of the railway line, however the area was close to the city and during the 1890s and early 1900s was substantially redeveloped with further subdivision of lots and mixed residential and commercial development. This was an immediate response to the tripling of the State's population in the recent decade due to the gold boom, and a pressing demand for affordable accommodation.
A number of trade and community organisations had their origins in the area at this time.
Over the years the population of the area changed as people relocated to suburban areas of the city. As a result, Northbridge became the home for successive migrant communities. for example, communities including Greek, Italian, Chinese and more recently Vietnamese migrants have settled here as property remained relatively cheap and had the advantage of being close to the city. These communities have over the years given

this area a distinctive character, generally recycling the existing buildings rather than redeveloping the area.
Northbridge, named because it is just north of Perth across the railway bridge, was approved as a suburb name in 1982. Roe Street was not on the original 1830 plan of the Perth Town. There was a road between Beaufort and William Streets, but not further west as this area was a swampy area that the Whadjuk Nyoongar called Gooloogoolup (Lake Kingsford and Lake Irwin). The area was infilled and Roe Street was made in 1845.The 1897 Perth Town Plan shows a number of buildings on the north side of Roe Street by then (the southern side being the Railway yards and infrastructure). However, there were no structures in the location of 68 Roe Street. The Metropolitan Water Supply Survey plan dated 1949 shows the building was originally 56-60. The plan labels the place 'Livery Stables.' There was a shopfront on Roe Street with no setback, and two long rows of horse stalls along the east and east boundary, with a chaff house at the rear of the lot. When the Post Office Directory ceased publication in 1949, the building was still listed as No. 56, occupied by WA Horse Cattle and Vehicle Bazaar, stock dealers.
