### Standard Kerb Types and Installation Details Foreword

The City of Perth has adopted an approach for street enhancement projects to introduce more resilient granite kerbs to city centre streets; maintaining exposed aggregate concrete footpaths for the majority of situations; and identifying high profile locations for granite footpaths. This approach provides for a staged transition towards full granite footpaths in the future.

The kerb material required for street enhancement projects varies depending on the level of amenity proposed, as addressed in *Book 300 - Standard Footpath Design and Installation Details*. The various levels of amenity call for three types of kerb material to be used in street enhancement projects and can be found in the following chapters:

- *Chapter 401 - Standard Granite Kerbs*
- *Chapter 402 - Standard Precast Concrete Kerbs*
- *Chapter 403 - Standard In-situ Concrete Kerbs*

These chapters set out the standard dimensions and installation details for the different kerb types.

For further information regarding footpath design and installation details refer:
